Statement of Use

Northern Trust Bank is proposing to demolish their existing building located at 595 Biltmore Way. The existing single story building and single drive-thru approximately total 7,530 square feet. Northern Trust Bank is proposing to replace the existing bank branch with a slightly smaller single story building with a drive-thru of approximately 7,034 square feet in size.

RE: Northern Trust Bank Coral Gables - Queuing Analysis - #10133

Dear Ms. Hirsch,

The queuing analysis for the proposed relocation of Northern Trust Bank has been completed. This analysis is for the proposed relocation of the Northern Trust Bank located on the northeast corner of Biltmore Way and Segovia Street in Coral Gables, Florida. The existing site consists of a bank with one window for drive-in service. The proposed plan consists of relocating the bank east of the current site and building new parking where the bank is currently located (see attached site plan). The size of the bank and number of employees will remain the same, in addition to the drive-in service window. Access to the bank drive-in window will be on Biltmore Way. The drive-in will have one service window with a by-pass lane.

The recommended bank drive-in storage was calculated based on the ITE Trip Generation manual and an average transaction time per vehicle. The ITE Trip Generation manual rates show that a bank providing drive-thru service generates approximately 60% more trips on a daily basis. Therefore, sixty percent of the vehicular trips generated during the PM peak hour were assigned to the drive-in window. Based on previously approved studies and ITE research, the average transaction time per vehicle is two to four minutes. It was assumed that 50% of the hourly volume occurs during a peak 15 minutes. Applying a service rate of 3.5 minutes per vehicle per lane results in 4 vehicles serviced. By subtracting the number of vehicles serviced in 15 minutes (4) from the number of vehicles arriving (8), we obtain the resulting queue in vehicles ($8 - 4 = 4$) in queue. The calculations are summarized in the following Table.

Ms. Kelsey Hirsch

RE: Northern Trust Bank Coral Gables - #10133

Page 2

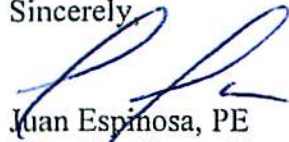

Required Storage for Drive-Thru Lanes

PM Peak Hour Volume (vehicles)	Total Peak 15 minutes (vehicles)	Average Service Rate (min/veh)	Vehicles Serviced (1 window)	Length of Queue in Vehicles	Storage required (@ 22 ft/veh) [excluding vehicle at service position]
$27 \times 60\% = 16$	$16 \times 50\% = 8$	3.5	$15/3.5 \times 1 = 4$	$8 - 4 = 4$	4 veh/window or 88 ft

Source: DPA

Therefore, a minimum of 88 feet of storage per lane for the drive-thru service, excluding the vehicle at the service position is needed. The available storage for queuing at the drive-thru is 155 feet. The space available for stacking at this site is well within the aforementioned queuing need. We stand ready to provide any support needed for this proposed project. Should you have any questions or comments, please call me at (305) 447-0900.

Sincerely,

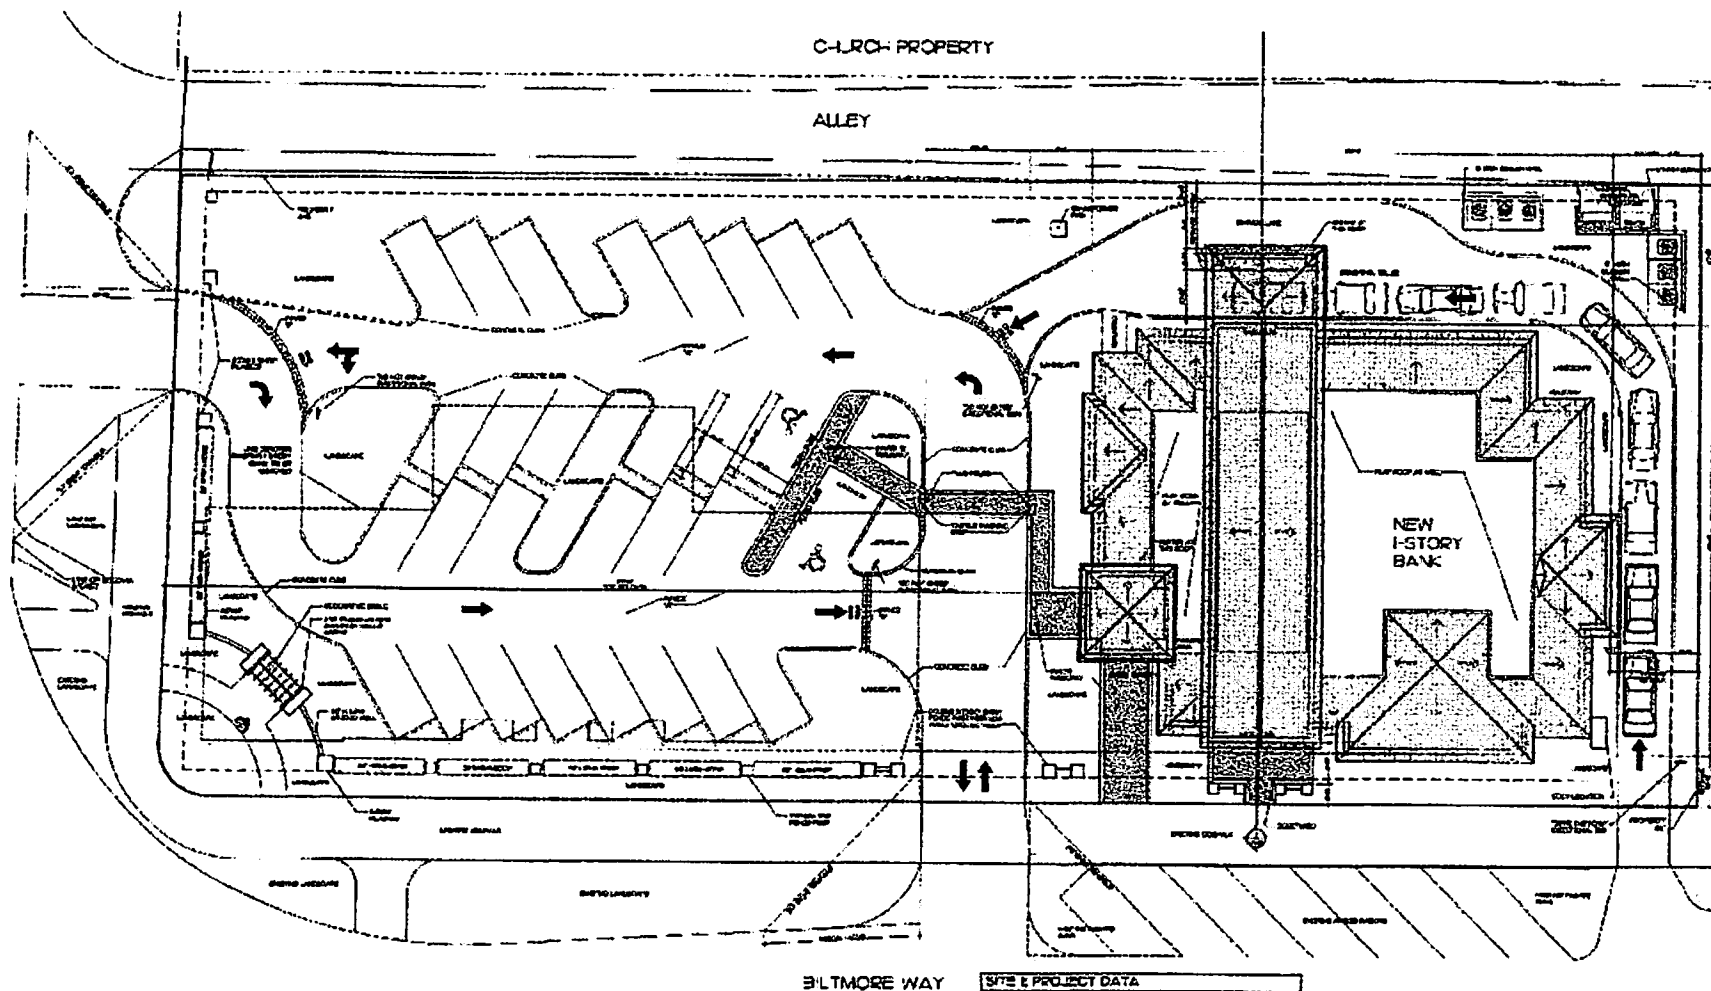

Juan Espinosa, PE
Vice-President - Transportation
