| Vendor     | FAST-DRY             | Purchase Description | Resurfacing of Tennis Courts | Price           | \$99,700 |

**PART II: Justification (Supporting documentation must be included/attached)**

|                       |  |
|-----------------------|--|
| Emergency Procurement | <p>The Salvadore Park-Tennis Center suffered significant loss of Clay court material due to Hurricane Irma. The courts currently stand at 1/4" (inch) base and surface material and the USTA / Courts Builders specs requires for 1" (inch) of material. In order for the residents and the Junior Orange Bowl championships to use the courts safely and to the Standards of Courts Builders Association / USTA, this needs to be done right away. FAST-DRY has been selected to do the work because they are a specialized in this kind of work, they are licensed, they have previously done this resurfacing in the same park and are the fastest company available to do the job.</p> |
|-----------------------|--|

**Special Note:** The justification must include a basis for the emergency and the selection of the particular contractor for the purchase.

Re: Salvadore Park, 1120 Andalusia Avenue, Coral Gables, FL 33134

Dear Robert & Grettel:

Fast-Dry Courts, Inc. offers our revised price to resurface the clay courts at Salvadore Park as follows.

**\$99,700** - Laser taper resurface thirteen (13) clay tennis courts (5 Har-Tru courts west of the Pro Shop, and 8 marl type courts east of the Pro Shop). Clean surface, remove old lines and nails, apply 180 tons of new surface material (+/- 20 tons per court on the Har-Tru courts and +/- 10 tons per court on the marl courts) using laser guided grading equipment to help reestablish or maintain the precise court slope and optimal surface depth; install herringbone style line tapes secured with 2-1/2" aluminum nails to USTA specifications; repaint net posts. Courts will be watered and rolled to initial firmness. All wastes will be hauled away by FDC.

It is the Owner's responsibility to inform FDC before going to contract and/or any work begins of problem areas on the court surface such as excessive low areas holding water after a rain, an improper slope of less than 1" in 30', where Har-Tru material is very thin, or other problems that affect the proper resurfacing of the court(s). The material quoted on this job is a best guess estimate of how much surface material is needed to get your courts into proper playing condition. During the resurface process the foreman on the job may discover that additional material may be needed to correct low or thin areas in the court system not detected by the estimator or pointed out by the Owner in the original examination of the courts. That additional tonnage rate is \$500.00. If the Owner does not agree to the adding of material, then low areas after rain or watering may need additional time to dry out, or be repaired by Owner's maintenance personnel. The low end of the court should always be several inches higher than the outside landscaped area for proper drainage.

If you have any further questions or would like a formal contract for the quoted work, please contact 800-432-2994.

Sincerely,  
FAST-DRY COURTS, INC.
