To Whom it May Concern,

I, William T. Fowler, ISA Board Certified Master Arborist do hereby proclaim that everything that is stated in this letter is of my professional opinion based on information provided to me.

I visited the site above on May 3, 2025 to evaluate 2-Southern Live Oak- *Quercus virginiana*, one located on the Westside rear with the following specifications DBH= 21.5inches, HGT= 45foot, SPR= 26foot (38'x14') the tree was in good health and normal in vigor. The tree is located underneath FP&L power lines and has been trimmed regularly to keep adequate distance from lines. There are a number of header cuts on the Eastside of the crown, approximately 5-8 cuts that are under 4 inches in diameter and possibly 1 that is at 4 inches or maybe a little bigger. These removal cuts should be taken back to "Collar Cuts" in order to allow the wounds to cover themselves properly.

The second Live Oak Tree is on the Northside rear of the property with the following specifications are as follows DBH= 20inches, HT= 45foot, SPR= 23.5foot (30'x17'). There are a number of header cuts on the Southside of the crown, approximately 5-12 cuts that are under 4 inches in diameter and possibly 1 that is approximately 5.5 inches in diameter. These removal cuts should be taken back to "Collar Cuts" in order to allow the wounds to cover themselves properly.

The Pruning Prescription will allow the tree to cover the wounds properly to avoid insect and other bio-organisms to infiltrate the tree protection zone within the branch collars.

Please keep in mind that Per Coral Gables Code Chapter 82 it is required that all pruning practices be in accordance with the current International Society of Arboriculture (ISA) Best Management Practices and American National Standards Institute (ANSI), A300 Standards, Part One.

If you have any questions or concerns, please feel free to contact me at the above stated phone or E-Mail address.

Thank You,

William T Fowler
