David M. Dayan and Associates, Inc.
Architecture Planning Interior Design

Our work experience encompasses a broad range of commercial, institutional, resort and residential projects. Programming, planning, design, construction administration, facility master planning, CAD documents and specifications are among the professional services the firm provides.

Recently we have completed a health educational and welfare facility for HRS in Hialeah, Florida. This project included the renovation of approximately 70,000 s.f. in a completely rundown warehouse facility. The project included several specialized departments, public and private areas, an intricate phone and computer communication systems, accessibility for worker and users alike, as well as a full service energy management system for the tenant.

Currently we are performing on-going management and observation services for several custom residential projects. Our firm is presently involved in the space planning and design of a number of resort retail and clothing shops for Red Sail Corporation in the Caribbean, as well as a mixed use facility in the Bahamas. We also just began a feasibility study for the Rod & Reel Club located in Miami Beach, Florida. This includes updating the existing club, meeting & banquet facility with the addition of executive residential suites and the addition of a marina at their waterfront site.
