Move/relocate certain criteria to more appropriate sections of the Zoning Code

SUMMARY OF PROPOSED CHANGES

APPENDIX C - MEDITERRANEAN VILLAGE FORM-BASED PLANNED AREA DEVELOPMENT

1. Classical Proportion

All buildings shall be designed according to the rules of Classical Proportion. The golden section, squares, circles, inscribed arcs, and lines shall be used to determine overall building form, massing, roof lines, and the location and scale of architectural features such as Towers, Cornice Lines, water tables, and entrance features. Architectural elements such as Arches, Columns, and Windows shall also be designed in accordance with the rules of Classical Proportion.

APPENDIX C - MEDITERRANEAN VILLAGE FORM-BASED PLANNED AREA DEVELOPMENT

2. Massing

Building mass shall be broken down into basic forms and shapes that follow the rules of Classical Proportion. The building mass shall include meaningful changes in roof height, facade depth, materials, and articulation and to represent important elements in the building such as a Primary Pedimental Entrance, a Critic space, or a Tower.

APPENDIX C - MEDITERRANEAN VILLAGE FORM-BASED PLANNED AREA DEVELOPMENT

3. Vertical Hierarchy

All buildings shall have a clearly articulated base, middle, and top. The base of the building shall express a load-bearing function and shall be designed at the scale of the pedestrian. The middle shall be designed with a simple rhythm and pattern that expresses the function of the building. The top shall express the special features where the building meets the sky, and shall be designed at the scale of the City. The connection between each vertical layer shall be marked by a Cornice line, Balustrade, or Skyline.

APPENDIX C - MEDITERRANEAN VILLAGE FORM-BASED PLANNED AREA DEVELOPMENT

4. Emphasis

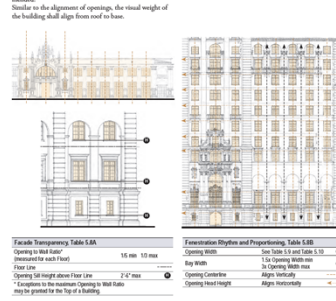

The facades of large buildings can be articulated through the application of special architectural elements. These elements shall be located to emphasize the principles of these M2M2, Top Massing, and Hierarchy. The Principal Entrance of a Building is recommended to be located on these elements. The diagrams on this page illustrate how some additional architectural structure can be placed at intersections of axis in the building.

APPENDIX C - MEDITERRANEAN VILLAGE FORM-BASED PLANNED AREA DEVELOPMENT

5. Fenestration

The rhythm and spacing of openings in the building facade, and the Proportion of opening to wall shall relate to the overall Proportion, Massing, style, formality, and function of the building itself. Fenestration includes Windows, Doors, and Garage Openings. Fenestration shall express the Mass of the Building. The collective of opening types may differ depending on the mass formality. To create an emphasis on a Building Mass, such as a principal entrance or tower, an odd number of opening types is recommended. To de-emphasize a Building Mass, such as a secondary mass or building envelope primary masses, an even number of opening types is recommended. Similar to the alignment of openings, the visual weight of the building shall align from roof to base.
