

To The Mayor of Coral Gables, The City Commissioners and the Historic Preservation Board,

The Garden of our Lord must be designated historic. We support its historic designation application. It meets several criteria for designation. It is a unique landmark in the city of Coral Gables.

The Garden of our Lord is part of a "green corridor" which runs from East Ponce until the Douglas Entrance. It is lined with specimen trees covered with Spanish Moss. The Garden is an essential part of the neighborhood and it meets the city's criteria for historic designation under the category of aesthetic significance because it "is an easily identifiable feature of its neighborhood." Not only does the developer want to demolish the Garden but he also wants to remove the specimen trees which line the swale on Antilla avenue and East Ponce. We strongly object to the developer removing all the trees from the swale on Antilla avenue and East Ponce.

The Garden is also more than worthy of historic designation because of its architecture. It was designed by noted architect, Robert Fitch Smith. Smith incorporated coral rock into the Garden's bench, wall, grotto and walkways to compliment The Woman's Club which sits on the adjacent block. Joanna Lombard and Rocco Ceo wrote the architectural criteria for the Garden's historic designation. We agree with the well respected Professors of Architecture at the University of Miami Ceo and Lombard that the Garden must be designated historic.

We also want to state that the zoning for the block upon which the Garden sits is designated SPECIAL USE. The zoning for that block was never meant for live/work or residential use. It is in a residential neighborhood and offices should not encroach into a residential neighborhood. The city must not allow the developer to get a variance to change the zoning from SPECIAL USE.

We support The Garden of our Lord's historic designation application.

We also want to state that the zoning for the block upon which the Garden sits is designated SPECIAL USE. The zoning for that block was never meant for live/work or residential use. It is in a residential neighborhood and offices should not encroach into a residential neighborhood. The city must not allow the developer to get a variance to change the zoning from SPECIAL USE.

We support The Garden of our Lord's historic designation application.

To The Mayor of Coral Gables ,The City Commissioners and the Historic Preservation Board,

The Garden of our Lord must be designated historic. We support its historic designation application. It meets several criteria for designation. It is a unique landmark in the city of Coral Gables.

The Garden of our Lord is part of a "green corridor" which runs from East Ponce until the Douglas Entrance. It is lined with specimen trees covered with Spanish Moss. The Garden is an essential part of the neighborhood and it meets the city's criteria for historic designation under the category of aesthetic significance because it "is an easily identifiable feature of its neighborhood." Not only does the developer want to demolish the Garden but he also wants to remove the specimen trees which line the swale on Antilla avenue and East Ponce. We strongly object to the developer removing all the trees from the swale on Antilla avenue and East Ponce.

The Garden is also more than worthy of historic designation because of its architecture. It was designed by noted architect, Robert Fitch Smith. Smith incorporated coral rock into the Garden's bench, wall, grotto and walkways to compliment The Woman's Club which sits on the adjacent block. Joanna Lombard and Rocco Ceo wrote the architectural criteria for the Garden's historic designation. We agree with the well respected Professors of Architecture at the University of Miami Ceo and Lombard that the Garden must be designated historic.

We also want to state that the zoning for the block upon which the Garden sits is designated SPECIAL USE. The zoning for that block was never meant for live/work or residential use. It is in a residential neighborhood and offices should not encroach into a residential neighborhood. The city must not allow the developer to get a variance to change the zoning from SPECIAL USE.

We support The Garden of our Lord's historic designation application.

The Garden of our Lord must be designated historic. We support its historic designation application. It meets several criteria for designation. It is a unique landmark in the city of Coral Gables.

The Garden of our Lord is part of a " green corridor " which runs from East Ponce until the Douglas Entrance. It is lined with specimen trees covered with Spanish Moss. The Garden is an essential part of the neighborhood and it meets the city's criteria for historic designation under the category of aesthetic significance because it "is an easily identifiable feature of its neighborhood." Not only does the developer want to demolish the Garden but he also wants to remove the specimen trees which line the swale on Antilla avenue and East Ponce. We strongly object to the developer removing all the trees from the swale on Antilla avenue and East Ponce.

The Garden is also more than worthy of historic designation because of its architecture. It was designed by noted architect, Robert Fitch Smith. Smith incorporated coral rock into the Garden's bench, wall, grotto and walkways to compliment The Woman's Club which sits on the adjacent block. Joanna Lombard and Rocco Ceo wrote the architectural criteria for the Garden's historic designation. We agree with the well respected Professors of Architecture at the University of Miami Ceo and Lombard that the Garden must be designated historic.

We also want to state that the zoning for the block upon which the Garden sits is designated SPECIAL USE. The zoning for that block was never meant for live/work or residential use. It is in a residential neighborhood and offices should not encroach into a residential neighborhood. The city must not allow the developer to get a variance to change the zoning from SPECIAL USE.

We support The Garden of our Lord's historic designation application.
