

ALHAMBRA WATER TOWER

Introduction

Presenting will be Emiliano Zurita, Sasha Kayal, and Shiori Sageshima from the Gulliver Preparatory Architecture Program. The purpose of the Urban Planning class is to promote awareness of design in the context of the environment.

The Project

The restoration of the Alhambra Water Tower is intended for the preservation of one of the most valued historical sites of the City of Coral Gables. Currently, the site consists of the tower and a few trees on an open grassy area. Keeping the concept of “neighborhood-friendly” in mind, we redeveloped the site into a more open and accessible space. Through extended research and observation, we strived to keep the details of the tower as true to its historic authenticity as possible.
