**Subject: Mediterranean Village
Coral Gables Trolley Ridership Estimate**

Per your request, Kimley-Horn and Associates, Inc. has performed an analysis to provide a preliminary Coral Gables trolley ridership estimate associated with the proposed Mediterranean Village development. As you are aware, the Coral Gables trolley currently operates along Ponce De Leon Boulevard between Flagler Street and the Douglas Road Miami-Dade Transit (MDT) Metrorail Station. The trolley operates Monday through Friday from 6:30 a.m. to 8 p.m. The existing trolley route has multiple stops in close proximity to the proposed development.

Per the traffic impact study performed for this project, the percentage of traffic traveling to the site via walking, bicycling, or public transit is estimated to be six (6) percent or a reduction in vehicular trip generation of 55 vehicles during the a.m. peak hour and 94 vehicles during the p.m. peak hour. Using an average vehicle occupancy rate of 1.2 persons per vehicle per the *Institute of Transportation Engineers*; the number of site patrons traveling to/from by alternative travel mode is estimated to be 66 persons in the a.m. peak hour and 112 persons during the p.m. peak hour. Furthermore, it was assumed that 10 percent of daily site traffic occurs during the single peak hour. Therefore, it can be concluded that approximately 1,120 persons would travel to and from the site by means other than a personal vehicle.

In order to estimate which alternative mode of travel these site patrons will utilize, commuting patterns summarized in the 2009-2013 *American Community Survey (ACS)* 5-year estimate data for Miami-Dade County was used. According to the ACS approximately 55 percent of all commuters who travelled by means other than a personal vehicle utilized public transportation. The traffic impact study identified 4 MDT Metrobus routes operating in the vicinity of the project site. Therefore, a portion of the patrons utilizing public transportation are expected to also utilize these bus routes. For purposes of this estimate, it is conservatively assumed that 50% of all transit users will utilize the trolley while the remainder would utilize the other available MDT routes. Table 1 summarizes the results of this estimating analysis.

Table 1: Mediterranean Village Transit Ridership Estimate Summary (AM Peak Hour/PM Peak Hour/Weekday)			
Total Alternative Mode Person Trips	Total Transit Person Trips (55% of Alternative Modes Trips)		
66 pph/ 112 pph/ 1,120 ppd	Coral Gables Trolley	4 MDT Metrobus Routes	Total
	18 pph/31 pph/308 ppd	18 pph/31 pph/308 ppd	36 pph/62 pph/616 ppd

Note: pph = persons per hour, ppd = persons per day.

As indicated, a total of 18-31 peak hour riders and approximately 308 daily riders are projected to utilize the existing trolley based upon the assumptions presented. The trolley operates on 12-minute headways for 13.5 hours per day along Ponce De Leon Boulevard, resulting in trolley passing the site 10 times per hour and 135 times per day in each day. Therefore, the project would generate an additional 2-3 riders per trolley during the peak hours and over 2 average riders per trolley throughout the day.

**Re: Mediterranean Village Traffic Impact Analysis Review (Ref #14153)
Response to 01/21/2015 Comments**

Dear Mr. Kephart:

We have received the review comments prepared by David Plummer and Associates, Inc. (DPA) dated January 21, 2015. We offer the attached revised traffic impact study and the following comment responses:

1. Figure ES-1: The Note at Galiano Street/Coconut Drive should say the southeast approach (not leg) is outbound only.

Response: The figure has been revised accordingly.

2. The ITE Multi-Use Project Internal Capture worksheets do not support the AM or the PM Peak Hour Trip Generation summary table in Appendix C. The 25% cap for the individual land uses should be adhered to and balanced in the worksheet. For example, the worksheet for the PM peak hour show the following internal capture rates for individual land uses: townhomes 45%, day care 28%, fitness center 54%, and hotel 47%. In order to reach concurrence with the city and save time, I recommend this issue be reviewed separately before the rest of the traffic impact study is modified.

Response: The worksheets previously included in the Appendix were for informational purposes only in order to demonstrate that the internal capture used in the analysis was reduced to not exceed 25% for each overall land use. However, based upon subsequent direction from the reviewer, the report was revised so the each of the ITE factors used in the internal capture calculation were capped at 25%. The applicant respectfully disagrees with this approach. However, the report was revised accordingly to expedite the City's review process. Note that the modal split was also revised per the reviewer's request.

3. In the restrictive alternative, existing traffic volumes will be diverted to other roadways. An exhibit should be provided showing these diversions.

Response: A series of figures summarizing this information is included in Appendix F.

4. The applicant states that both Ponce de Leon Boulevard/Sevilla Avenue and Ponce de Leon Boulevard/Palmero Avenue do not meet LOS standards and are candidates for traffic signalization. The applicant recommends one intersection, not both be signalized and

coordination with MDC is needed. The applicant needs to explain how the non-signalized intersection will be mitigated to meeting LOS standards.

Response: *As the previous report submittal indicates, both intersections meet MDC's typical criteria for signalization spacing. Therefore, there is the potential for both intersections to signalize as part of this project and the report was revised accordingly. It should be noted that a traffic signal at the intersection of Palermo Avenue would create significant gaps in the Ponce De Leon Boulevard northbound traffic stream to improve operating conditions at the Sevilla Avenue intersection.*

5. The applicant states that eastbound Catalonia Avenue at Ponce de Leon Boulevard does not meeting LOS standards unless the eastbound approach is restricted to right-turns only. The applicant needs to propose how that will be accomplished (i.e. median, signage, etc.).

Response: *The report has been revised to clearly state that the installation of a raised median(s) is proposed to accomplish this restriction.*

6. Other improvements mentioned in the report including the signalization of Almeria Avenue/SW 37 Avenue, traffic calming devices, streetscape features, a covered trolley stop, and a contribution towards trolley service enhancements. The City needs to determine how all of the improvements in the report will be documented in the development agreement and what timing will be for the improvements.

Response: *Comment noted.*

7. The City should consider requiring additional traffic calming studies for the residential streets east of LeJeune Road (Malaga Avenue and Catalonia Avenue) and east of Galiano Street (Sevilla Avenue, Palermo Avenue, Malaga Avenue) six to 12 months after the opening of the project to assure that these streets are protected from cut-through traffic.

Response: *Comment noted.*

8. The traffic calming devices proposed by the applicant will need City Public Works, Miami-Dade County, and City Fire Department approval.

Response: *Comment noted.*

We trust that we have adequately responded to this set of comments. Please contact me at 954-535-5100 if you have any questions.

Very truly yours,

KIMLEY-HORN AND ASSOCIATES, INC.

***Re: Mediterranean Village Traffic Impact Analysis Review (Ref #14153)
Response to 12/19/2014 Comments***

Dear Mr. Kephart:

We have received the review comments prepared by David Plummer and Associates, Inc. (DPA) dated December 19, 2014. We offer the attached revised traffic impact analysis and the following comment responses:

1. The trip generation analysis the retail and restaurant uses were grouped as shopping center. The restaurant and retail uses should separate.

The report has been revised accordingly.

2. For internal capture, the maximum rate for any individual land use should not exceed 25%.

The report has been revised accordingly.

3. The land uses on page 3 and in Table 1 do not completely match the land uses included in the trip generation summary in Appendix C.

The report has been revised to address this discrepancy. Note that the development intensities used in the analysis have been slightly increased to account for any fluctuations in the final development plan.

4. The internal capture matrices provided in Appendix C do not completely match the trip generation summary in Table 1.

The report has been revised accordingly.

5. In the restrictive alternative, the city wants the intersection of Galiano/Sevilla to have the following movements: EB left and right, WB right only, NB right, left, and thru, SB thru and right. The applicant needs to develop an alternative that meets these requirements.

Per email correspondence on 12/31/2014, a concept to provide the requested movement restrictions was reviewed and preliminary approved by City staff. Furthermore, staff provided direction to implement the same concept at Galiano Street and Palermo Avenue. The report was revised accordingly.

6. Given the above, the future conditions with project scenario will need re-analysis.

The report has been revised accordingly.

We trust that we have adequately responded to these comments. Please contact me at 954-535-5100 if you have any questions.

Very truly yours,

KIMLEY-HORN AND ASSOCIATES, INC.

John J. McWilliams, P.E.
Vice President

EXECUTIVE SUMMARY

Agave Ponce, LLC is proposing a mixed-use development (Mediterranean Village) in the City of Coral Gables in an area bounded by Ponce De Leon Boulevard (west), Galiano Street (east), Sevilla Avenue (north) and Malaga Avenue (south). The existing site contains vacant land and buildings that will be demolished. The proposed development will consist of a mix of office, residential, and retail uses including a hotel, restaurants, a gym/fitness club, a day care center, and a movie theater.

Trip generation calculations for the proposed mixed-use development were performed using the Institute of Transportation Engineer's (ITE's) *Trip Generation*, 9th Edition. The proposed development is expected to generate 864 new trips during the A.M. peak hour and 1,468 new trips during the P.M. peak hour.

In order to reduce cut-through traffic and speeds along surrounding local streets east of the site, several overall traffic calming measures are being considered. In general, these measures can be grouped into two (2) categories: non-restrictive and restrictive. The non-restrictive measures include reduction of the pavement width, construction of mid-block raised center median with paver treatments within the travel lanes, construction of entry features immediately west of the north-south alley to the west of SW 37th Avenue/Douglas Road where land uses shift from commercial uses to single-family residential homes, and reconstruction of existing roundabouts or installation of raised/tailed intersections along Galiano Street/Malaga Avenue to address existing geometric deficiencies. The restrictive measures include the following:

- Construction of north-south median at the intersection of Galiano Street at Sevilla Avenue, prohibiting east-west through movements, the westbound left-turn movement, and the southbound left-turn movement.
- Construction of north-south median at the intersection of Galiano Street at Palermo Avenue, prohibiting the east-west left and through movements, the northbound left-turn movement, and the southbound left-turn movement.

- Construction of north-south median at the intersection of Galiano Street at Malaga Avenue, prohibiting the westbound left-turn movement and the southbound left-turn movement.

Different project traffic distributions were considered for both the non-restrictive and restrictive measures.

Intersection capacity analyses indicate that the study intersections are expected to operate at levels of service (LOS) E or better during the A.M. and P.M. peak hours under all analysis conditions with exception of one (1) stop-controlled approach during the P.M. peak hour under future background conditions, one (1) stop-controlled approach during the A.M. peak hour under future total conditions with both traffic calming plans, and two (2) stop-controlled approaches during the P.M. peak hour under future total conditions with both traffic calming plans. These results are common during peak periods where a high traffic volume free-flowing major street intersects with a stop-controlled minor street.

Three (3) of these one-way stop-controlled intersections are candidates for signalization as the expected volumes, with the proposed development, meet the peak hour minimum volume threshold and meet the Miami-Dade County signalized intersection spacing standards. Signalization of an intersection is under jurisdiction of Miami-Dade County Public Works and Waste Management Department Traffic Engineering Division (TED). TED will review the intersection to determine if signalization is appropriate and warranted. If TED determines it appropriate and warranted, traffic signalization plans would be required and reviewed by MDCPWM.

The remaining one-way stop-controlled intersection mentioned above is at a project driveway and it is recommended that all-way traffic control be considered at this location to improve operations including a potential roundabout.

The project plans numerous improvements to improve connectivity and accessibility for alternative modes of travel including the following:

- Enhanced sidewalk and pedestrian areas that include wide sidewalks, public art, robust landscaping, covered walkways, and enhanced streetscape features
- Secured bicycle parking areas
- Changing/shower facilities with lockers and bicyclists
- Covered trolley stop shelter along Ponce De Leon Boulevard at Palermo Avenue providing seating and transit information including route schedules and maps
- The project will also consider making a contribution towards trolley service enhancements:
 - Extend the existing weekday trolley service which operates until along Ponce De Leon Boulevard to a later hour
 - Operate a new Central Business District (CBD) loop route along Alhambra Circle, Merrick Way, Galiano Street, Almeria/Sevilla Avenue, and Salzedo Street during weekday morning, mid-day, and afternoon peak periods.
 - Modifications to the current trolley stop locations to improve accessibility to the project site.

Figure ES 1 illustrates the general traffic distribution, future operating conditions, and potential improvements found in the foregoing analysis.

INTRODUCTION

Agave Ponce, LLC is proposing a mixed-use development in the City of Coral Gables in an area bounded by Ponce De Leon Boulevard (west), Galiano Street (east), Sevilla Avenue (north) and Malaga Avenue (south). The existing site contains vacant land and buildings that will be demolished. The proposed development will consist of a mix of office, residential, and retail uses including a hotel, restaurants, a gym/fitness club, a day care center, and a movie theater.

Primary access to the site is proposed via parking garage entrances/exits on Sevilla Avenue, Palermo Avenue, and Malaga Avenue. Access to the residential townhouses is proposed via an alley along the east side of the site immediately west the proposed townhomes. Coconut Grove Drive from Palermo Avenue to Malaga Avenue is proposed to be converted from a two-way street to a one-way southbound street as part of this development. This street will be pedestrian-oriented and will provide supplementary drop-off/pick-up areas. A hotel porte cochere is proposed accessing Ponce De Leon Boulevard providing access for hotel patrons to the garage. However, the majority of parking is accessed via driveways along Sevilla, Palermo, and Malaga Avenues.

A project location map is included as Figure 1 and a site plan is provided in Appendix A. The project is expected to be completed by year 2017.

Kimley-Horn and Associates, Inc. has completed this traffic impact analysis to assess the project's impact on the surrounding roadway network and determine if adequate capacity is available to support future traffic volumes. This report has been conducted in accordance to the methodology submitted to the City on May 20, 2014. Methodology correspondence is provided in Appendix B. This report summarizes the data collection, project trip generation and distribution, and operational analyses. The report also addressed comments provided by City Staff and City Consultants dated October 4, 2014; December 19, 2014; and January 21, 2015.

PROJECT TRAFFIC

Project traffic used in this analysis is defined as the vehicle trips expected to be generated by the project and the distribution and assignment of that traffic over the study roadway network.

Existing and Proposed Land Uses

The project site currently contains vacant buildings that will be demolished. The proposed development will approximately consist of the following:

- 242,000 square feet of retail space
- 314,000 square feet of office space
- 15 residential townhouses
- 214 high-rise residential condominiums
- 184-room hotel
- 29,000 square feet of restaurant
- 9,500 square-foot gym/fitness club
- 12,000 square-foot day care center
- 8-screen movie theater

Project Access

Primary access to the site is proposed via parking garage entrances/exits on Sevilla Avenue, Palermo Avenue, and Malaga Avenue. Access to the residential townhouses is proposed via a service alley along the east side of the site immediately behind the proposed townhomes. Coconut Grove Drive from Palermo Avenue to Malaga Avenue is proposed to be converted from a two-way street to a one-way southbound street as part of this development. This street will be pedestrian oriented and will provide supplementary drop-off/pick-up areas for retail uses. A hotel porte cochere is proposed off of Ponce De Leon Boulevard provided access for hotel patrons to the hotel and garage. However, the majority parking is accessed via driveways along Sevilla,

Palermo, and Malaga Avenues. A site plan is provided in Appendix A. The following driveways are proposed for the project site:

- Three (3) driveways along Sevilla Avenue
 - One (1) full-access driveway provides access to the underground service corridor.
 - One (1) full-access driveway provides access to the public parking garage (North Driveway).
 - One (1) full-access driveway provides access to the alley serving the residential townhomes.
- Two (2) driveways along Palermo Avenue
 - One (1) full-access driveway provides access to the public parking garage (North Driveway).
 - One (1) full-access driveway provides access to the alley serving the residential townhomes.
- Two (2) driveways along Ponce De Leon Boulevard
 - One (1) right-in driveway will serve the hotel porte cochere.
 - One (1) right-out driveway will serve the hotel porte cochere.
- Two (2) driveways along Malaga Avenue
 - One (1) right-in/left-in/right-out driveway providing access to the garage.
 - One (1) full-access driveway providing access to the alley serving the residential townhomes.

Trip Generation

Trip generation calculations for the proposed development were performed using the Institute of Transportation Engineer's (ITE's) report *Trip Generation*, 9th Edition. Trip generation was determined using ITE Land Use Codes (LUC) 820 (Shopping Center), 492 (Health/Fitness Club), 445 (Multiplex Movie Theater), 230 (Residential Condominium/Townhouse), 232 (High-Rise Residential Condominium/Townhouse), 310 (Hotel), 565 (Day Care Center), 710 (General Office Building), 931 (Quality Restaurant), and 932 (High-Turnover (Sit-Down) Restaurant). Table 1

summarizes the project's expected trip generation for the weekday A.M. and weekday P.M. peak hours of adjacent street traffic. As shown in Table 1, this project is expected to generate 1,201 gross trips during the A.M. peak hour and 2,250 gross trips during the P.M. peak hour. Detailed trip generation information is included in Appendix C.

Internal Capture Volumes

Internal capture is expected between the complementary land uses within a project. Internal capture trips are trips made among the on-site uses. Internal capture trips for the project were determined based upon methodology contained in the ITE's, *Trip Generation Handbook*, 2nd Edition June 2004. Per direction from City staff, the ITE factors used in the internal capture calculation were capped at 25 percent (25.0%). The A.M. peak hour and P.M. peak hour internal capture rates are expected to be 15.5 percent (15.5%) and 13.2 percent (13.2%). The applied internal capture percentages are presented in Table 1 and detailed calculations are contained in Appendix C.

Pass-By Capture Volumes

A portion of the driveway volumes at the project site will be the result of new trips on the roadway network. The remainder of the driveway volumes will be trips from the adjacent traffic passing by the site (pass-by capture trips). Pass-by trips are intermediate stops on the way from an origin to a primary trip destination. Pass-by capture rates were estimated using ITE Land Use 820 (Shopping Center). The pass-by percentages were determined based on information provided in the ITE's, *Trip Generation Handbook*, 2nd Edition June 2004. The average pass-by capture used for the uses was 9.5 percent (9.5%) in the A.M. peak hour and 20.1 percent (20.1%) in the P.M. peak hour. The pass-by capture rates expected for the development are indicated in Table 1. Detailed calculations and figures depicting pass-by project trips are contained in Appendix C.

Multimodal Reduction

In order to account for the urban environment in which the project site is located in, a multimodal (public transit, bicycle, and pedestrian) reduction of six percent (6%) was applied to the site. Six

percent (6%) was conservatively assumed as the average modal split for residential (8%) and visitors (4%) based upon the *2012 American Community Survey* for Miami-Dade County. It is expected that employees, residents, and guests in nearby hotels will choose to walk to the proposed development. It is also anticipated that hotel guests will walk to the adjacent retail stores, restaurants, and other local places of interest include the Miracle Mile shopping district and nearby residential buildings. Additionally, it is expected that a portion of the trips will utilize transit. Miami-Dade County Transit (MDT) provides bus service via four (4) routes in the vicinity of the site:

- Route 24 operates on SW 22nd Street/Coral Way within the vicinity of the project. The route operates at 40-minute headways throughout the day and provides connecting service to 32 additional Miami-Dade Transit bus routes, as well as the Metrorail via the Metromover. Bus stops for Route 24 are provided along Andalusia and Aragon Avenues near Ponce De Leon Boulevard which is a 4-7 minute walk from the site.
- Route 37 operates on SW 37th Avenue/Douglas Road within the vicinity of the project. The route operates at 30-minute headways throughout the day and provides connecting service to 28 additional Miami-Dade Transit bus routes, as well as the Metrorail via the Metromover. Bus stops for Route 37 are provided along SW 37th Avenue Douglas Road at Sevilla Avenue and Palermo Avenue which is a 3-4 minute walk from the site.
- Route 42 operates on Le Jeune Road within the vicinity of the project. The route operates at 30-minute headways throughout the day and provides connecting service to 27 additional Miami-Dade Transit bus routes, as well as the Metrorail via the Metromover. Bus stops are provided at LeJuene Road and Palermo Avenue which is a 6 minute walk from the site.
- Route 56 operates on Le Jeune Road within the vicinity of the project. The route operates at 50-minute headways throughout the day and provides connecting service to 16 additional Miami-Dade Transit bus routes, as well as the Metrorail via the Metromover. Bus stops for Route 56 are the same as Route 42.

In addition to the Miami-Dade County Transit, the City of Coral Gables provides a trolley service that operates on Ponce De Leon Boulevard with 15 minute headways throughout the weekday from 6 A.M. to 8 P.M. The trolley route services a number of points of interest, including the Coral Gables Art Cinema, Westin Colonnade Hotel, Miracle Theater, Miracle Mile Shops, Coral Gables Police Department, Fred B. Hartnett/Ponce Circle Park, and Coral Gables Hospital. The transit data and trolley map is provided in Appendix D.

Net New Project Trips

Net new project trips are equal to the gross project trips minus the internal capture and pass-by capture trips. The net new project trips represent additional vehicles on the roadway network. As shown in Table 1, this project is expected to generate 864 net new trips during the A.M. peak hour and 1,468 net new trips during the P.M. peak hour.

Table 1: Trip Generation

Proposed Land Use	ITE Code	Scale	Gross Trips			Internal Capture		External Trips			Pass-By Capture		New Project Trips

Net New Trips													619 (620)	245 (848)	864 (1,468)

Overall Trip Distribution

The likely distribution of project traffic was forecasted for the trips expected to be generated by the proposed development. The trip distribution was based on a cardinal trip distribution for the project site's traffic analysis zone (TAZ 1061) obtained from the *2035 Cost Feasible Plan* travel demand model developed by the Miami-Dade Metropolitan Planning Organization. The cardinal trip distribution for TAZ 1061 is provided in Table 2. The distribution data is provided in Appendix D.

Table 2: Cardinal Trip Distribution	
Cardinal Direction	Percentage of Trips
North-Northeast	19.80%
East-Northeast	18.68%
East-Southeast	4.33%
South-Southeast	5.57%
South-Southwest	18.21%
West-Southwest	14.18%
West-Northwest	9.13%
North-Northwest	10.09%
Total	100.00%

Potential Traffic Calming Plans

A traffic calming study was previously conducted for the residential neighborhood east of the site in an effort to reduce existing and future cut-through traffic. This study examined the following roadway segments:

- Sevilla Avenue from Galiano Street to SW 37th Avenue/Douglas Road
- Palermo Avenue from Galiano Street to SW 37th Avenue/Douglas Road
- Malaga Avenue from Galiano Street to SW 37th Avenue/Douglas Road
- Coconut Grove Drive from Malaga Avenue to SW 37th Avenue/Douglas Road

In order to reduce cut-through traffic and speeds along these corridors, several overall traffic calming measures are being considered. In general, these measures can be grouped into two (2) categories: non-restrictive and restrictive.

Non-Restrictive Measures

Non-restrictive measures often focus on speed control and vertical changes in roadway geometry. These include options such as roadway narrowing, speed tables and roundabouts. For purposes of this analysis, the following improvement plan was considered:

- Reduction of the pavement width from 36 to 40 feet to approximately 19 feet of pavement allowing for two (2) 9.5-foot travel lanes. The additional area created by this reduction will provide for room for a swale and large shade trees. This treatment will be incorporated on Sevilla Avenue, Palermo Avenue, Malaga Avenue, and Coconut Grove Drive between Galiano Street/Malaga Avenue and SW 37th Avenue/Douglas Road.
- Construction of mid-block raised center median with paver treatments within the travel lanes along the same roadway segments of the pavement width reduction.
- Construction of entry features immediately west of the north-south alley to the west of SW 37th Avenue/Douglas Road where land uses shift from commercial uses to single-family residential homes along the same roadway segments of the pavement width reduction.

In addition, the two (2) intersection control options were considered at the intersections along Galiano Street/Malaga Avenue from Sevilla Avenue to Coconut Grove Drive: (a) reconstruction of the existing roundabouts to better meet geometric standards or (b) installation of raised/tailed intersections.

These improvements are expected to reduce speeds and deter cut through traffic within the residential neighborhood and improve overall livability. It should also be noted that the implementation of these improvements are also expected to reduce existing and future cut-through traffic between SW 37th Avenue/Douglas Road and Galiano Street/Malaga Avenue. The traffic calming measures will increase the travel time along these streets making alternative

routes more attractive for project traffic. However, volume reduction is location specific and needs to consider several factors such as a) cut-through traffic volume b) system/network of traffic calming features c) alternative routes. Therefore, traffic volume reductions along these routes were not estimated.

Restrictive Measures

Restrictive measures prohibit certain vehicular movements within a segment or at an intersection. These include raised intersection medians, roundabout/median combinations and, or one-way conversions. Restrictive measures are often implemented in combination with non-restrictive measure. For purposes of the analysis, it was assumed that restrictive measures would be implemented at the intersections along Galiano Street/Malaga Avenue from Sevilla Avenue to Coconut Grove Drive. Based on feedback provided by City staff, the following restrictive measures are proposed:

- Construction of north-south median at the intersection of Galiano Street at Sevilla Avenue, prohibiting the east-west through movements, the westbound left-turn movement, and the southbound left-turn movement.
- Construction of north-south median at the intersection of Galiano Street at Palermo Avenue, prohibiting east-west left and through movements, the northbound left-turn movement, and the southbound left-turn movement.
- Construction of north-south median at the intersection of Galiano Street at Malaga Avenue, prohibiting the westbound left-turn movement and the southbound left-turn movement.

In addition, the eastbound approach of the Malaga Avenue at Coconut Grove Drive intersection is proposed to serve as an out-only roadway, prohibiting the northbound left-turn movement, westbound through movement, and southbound right-turn movement.

These restrictions would result in a significant reduction on existing and future cut-through traffic volumes within the study neighborhood. However, the subject movement restrictions will impact the accessibility of the subject neighborhood.

Trip Assignment

Two (2) different project traffic distributions were developed to account for both scenarios (non-restrictive and restrictive traffic calming measures). Traffic volumes were reassigned for the restriction traffic calming scenario. Although the majority of the traffic associated with the proposed restrictive movements is expected to divert to east-west streets surrounding the subject neighborhood, a portion of these restricted movements are expected to perform left-turn and right-turn movements at the subject intersections. The analysis assumed the following:

- Galiano Street at Sevilla Avenue
 - Fifty percent (50%) of eastbound through movement will reroute and perform either a left-turn movement or a right-turn movement at the subject intersection.
 - Twenty-five percent (25%) of the westbound left-turn and through movements will reroute and perform a right-turn movement at the subject intersection.
- Galiano Street at Palermo Avenue
 - Twenty-five percent (25%) of eastbound and westbound left and through movements will reroute and perform a right-turn movement at the subject intersection.
- Galiano Street at Malaga Avenue
 - Twenty-five percent (25%) of the westbound left-turn movement will reroute and perform a right-turn movement at the subject intersection.

The remainder is expected to reroute to other east-west streets based on both the destination of the diverted volumes and the percentage of turning movements at adjacent intersections. In addition, the eastbound approach at the intersection of Malaga Avenue at Coconut Grove Drive is proposed to serve as an out-only roadway. The traffic associated with these restrictions were reassigned per the future restriction of the intersection.

Figures 2 and 3 present the project's trip distribution with non-restrictive and restrictive traffic calming measures proposed in the residential area just east of the project site. Figure 4 presents the project's trip pass-by distribution. Figures 5 through 8 present the project's traffic assignment and pass-by assignment with non-restrictive and restrictive traffic calming measures for the weekday A.M. and P.M. peak hours.

EXISTING TRAFFIC

A.M. peak period (7:00 to 9:00 A.M.) and P.M. peak period (4:00 to 6:00 P.M.) turning movement counts were collected on May 13, 2014 (Tuesday), May 14, 2014 (Wednesday), May 15, 2014 (Thursday), and May 22, 2014 (Thursday) at the following twenty (20) intersections:

- SW 22nd Street/Coral Way and Ponce De Leon Boulevard
- Andalusia Avenue and Ponce De Leon Boulevard
- Valencia Avenue and Ponce De Leon Boulevard
- Almeria Avenue and Ponce De Leon Boulevard
- Sevilla Avenue and Ponce De Leon Boulevard (Southbound)
- Sevilla Avenue and Ponce De Leon Boulevard (Northbound)
- Palermo Avenue and Ponce De Leon Boulevard (Southbound)
- Palermo Avenue and Ponce De Leon Boulevard (Northbound)
- Catalonia Avenue and Ponce De Leon Boulevard
- University Drive and Ponce De Leon Boulevard
- Malaga Avenue and Ponce De Leon Boulevard
- Sevilla Avenue and Le Jeune Road
- Catalonia Avenue and Le Jeune Road
- Palermo Avenue and Le Jeune Road
- University Drive and Le Jeune Road
- Valencia Avenue and Galiano Street
- Valencia Avenue and SW 37th Avenue
- Almeria Avenue and Galiano Street
- Almeria Avenue and SW 37th Avenue
- Coconut Grove Drive and SW 37th Avenue

Turning movement counts performed previously as part of a previous analysis for the neighborhood east of the site were collected on November 6, 2013 (Wednesday) at the following four (4) intersections:

- Sevilla Avenue and Galiano Street
- Palermo Avenue and Galiano Street
- Malaga Avenue and Galiano Street
- Malaga Avenue and Coconut Grove Drive

The volumes were collected in 15-minute intervals and the peak hour was determined for each intersection. The Florida Department of Transportation (FDOT) peak season conversion factor (PSCF) was applied to the traffic counts to adjust the traffic to peak season volumes. The appropriate peak season conversion factor for the counts collected in November is 1.01 and for the counts collected in May is 1.02. In addition, peak hour factors of the overall intersection were applied to the peak season turning movement counts within the capacity analysis. The turning movement counts and FDOT peak season factor category reports are included in Appendix D. Figure 9 presents the existing turning movement volumes at the study intersections during the weekday A.M. and P.M. peak hours.

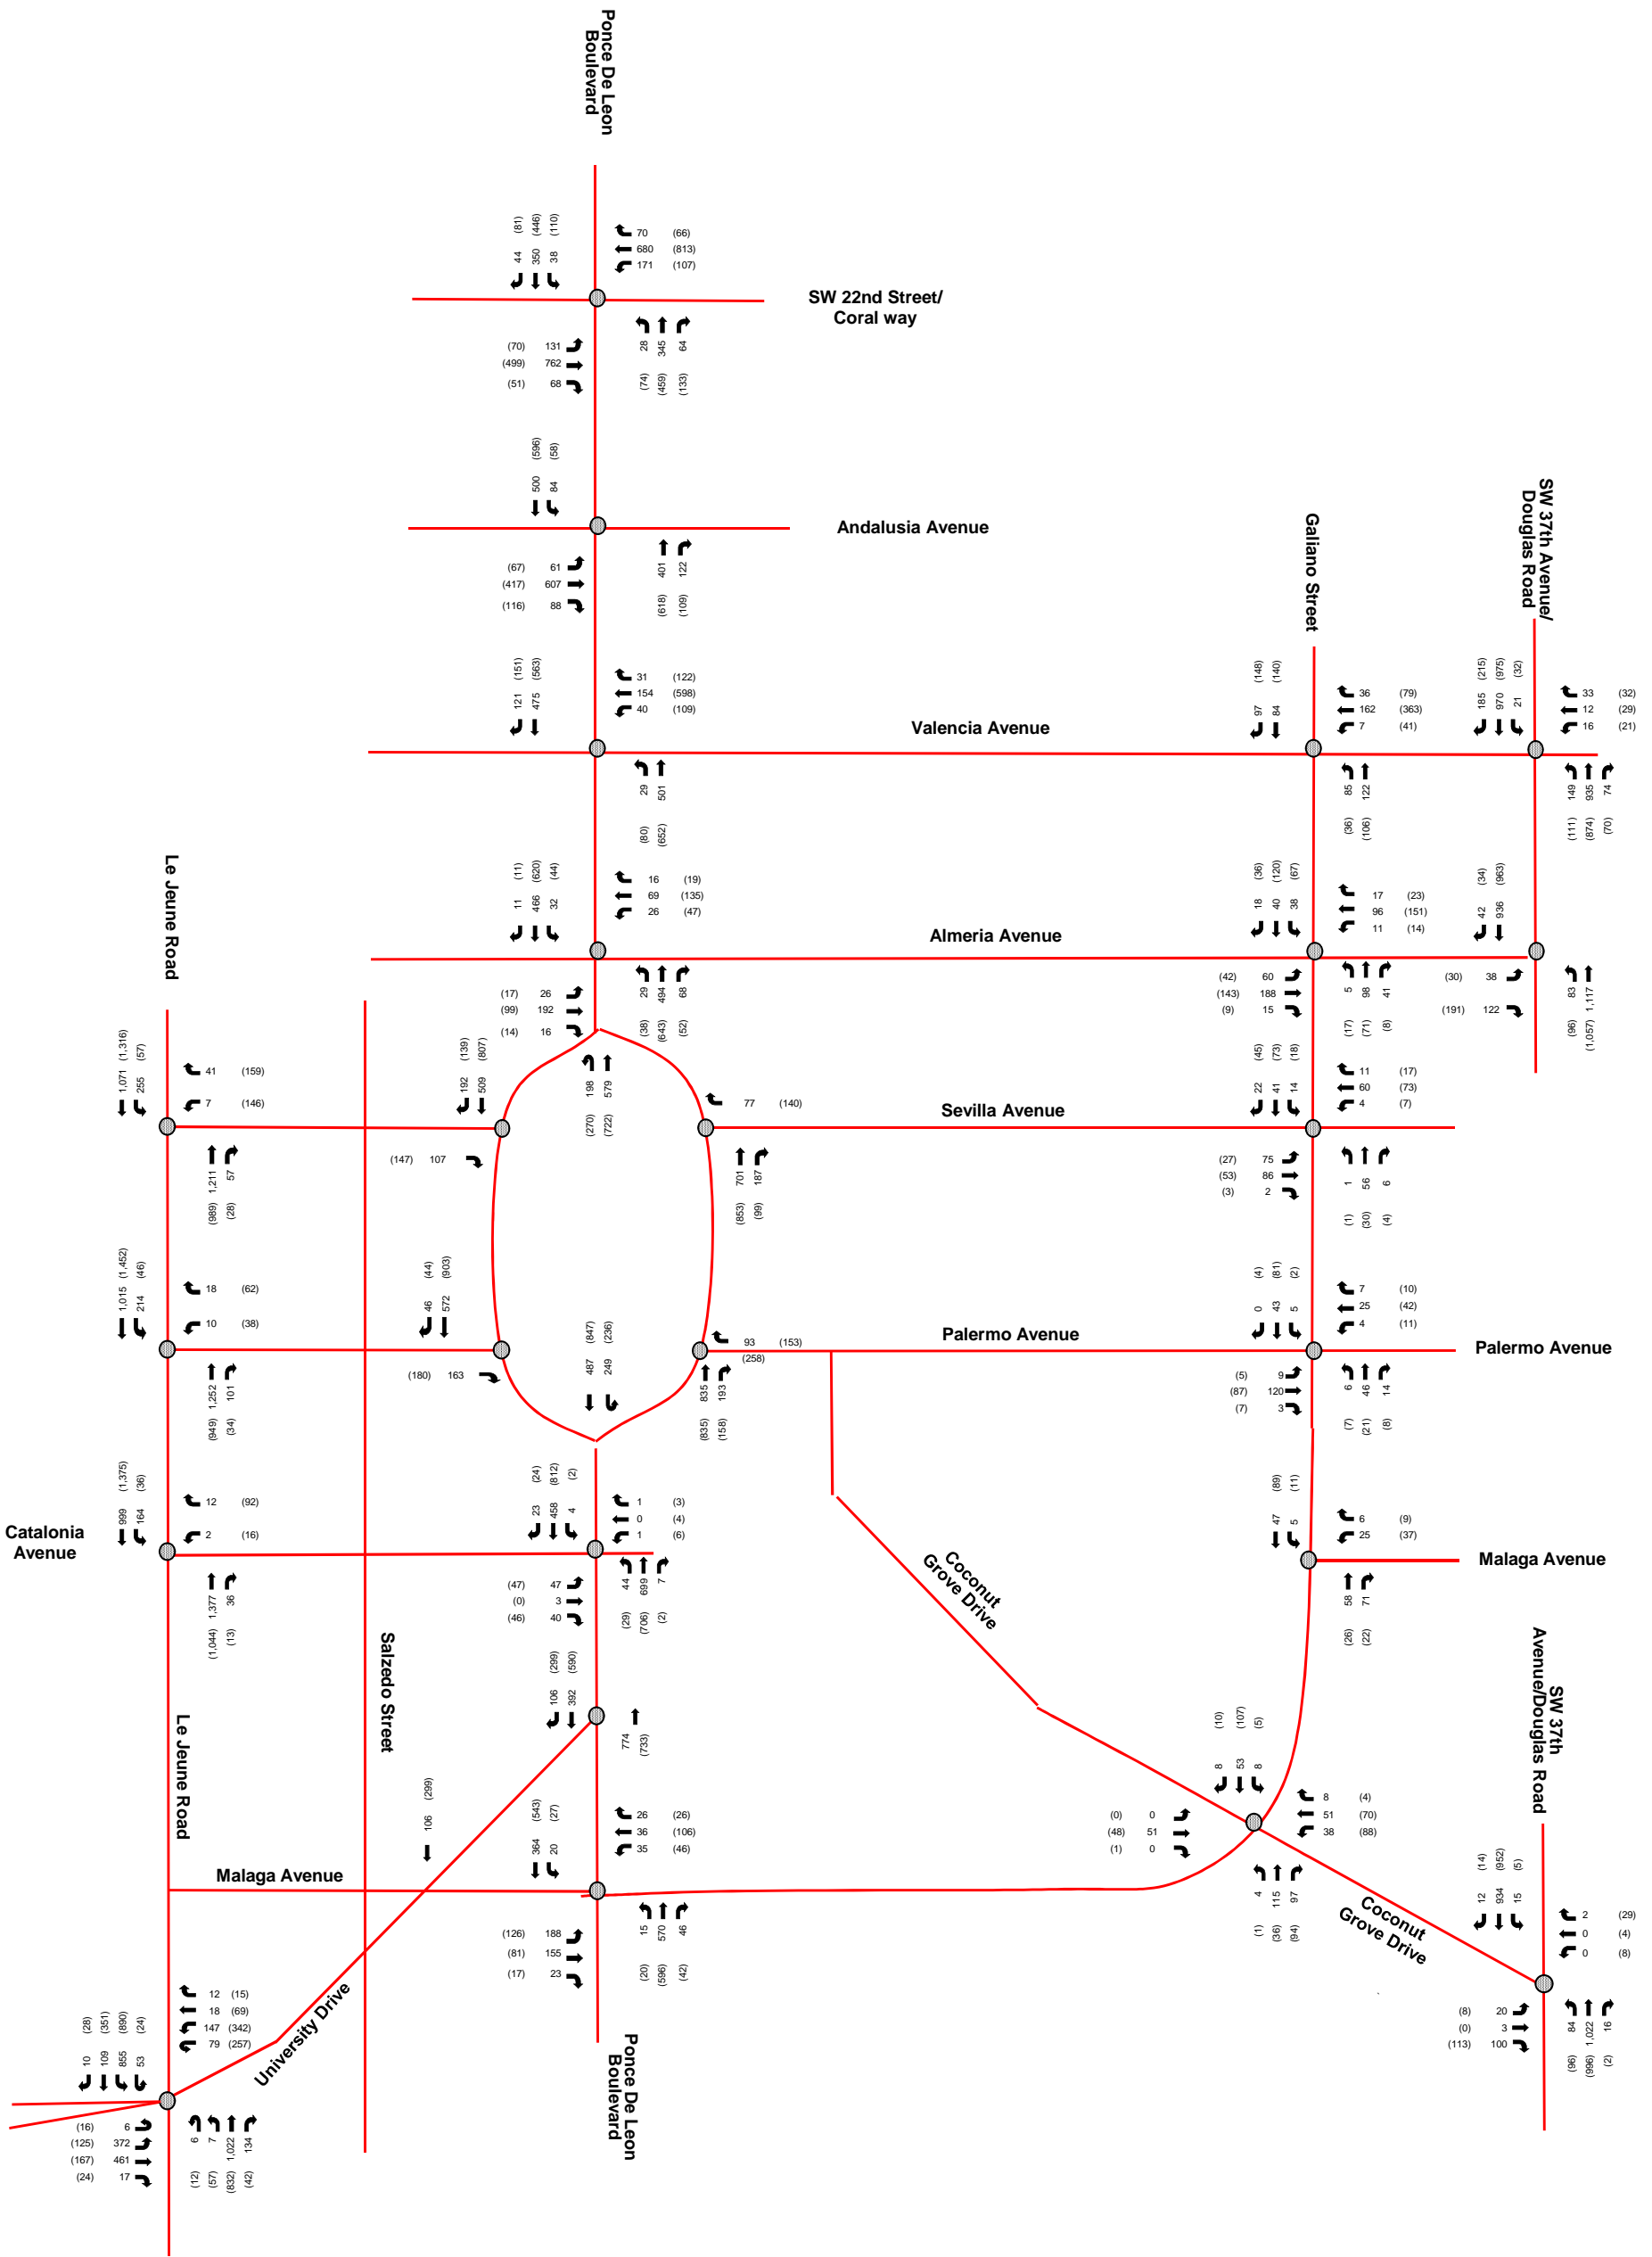

Figure 9
Existing Traffic Conditions
A.M. and P.M. Peak Hours
Mediterranean Village
Coral Gables, Florida

FUTURE BACKGROUND TRAFFIC

Future background traffic conditions are defined as expected traffic conditions on the roadway network in the year 2017 without the construction of the proposed project. Future background traffic volumes used in the analysis are the sum of the existing traffic and an additional amount of traffic generated by growth in the study area. Figure 10 presents the year 2017 peak hour background traffic volumes during the weekday A.M. and P.M. peak hours.

Background Area Growth

Future traffic growth on the transportation network was determined based upon historic growth trends at nearby FDOT traffic count stations and based upon the Miami-Dade Metropolitan Planning Organization's (MPO) projected 2005 and 2035 model network volumes. FDOT count stations referenced in this analysis include:

- Count Station #0024 located on SR 953/Le Jeune Road, 200 feet south of Coral Way/SR 972
- Count Station #0025 located on SR 953/Le Jeune Road, 200 feet south of SW 8th Street/SR 90
- Count Station #0082 located on SR 976/Bird Road, 200 feet east of SW 42nd Avenue
- Count Station #1048 located on SR 976/Bird Road, 200 feet west of SW 42nd Avenue
- Count Station #2534 located on SR 972/Coral Way, 200 feet east of SW 37th Avenue

The FDOT historic growth rate analysis yielded a -0.49 percent (-0.49%) growth rate over the most recent ten (10) year period and a 1.43 percent (1.43%) growth rate over the most recent five (5) year period.

Additionally, the MPO 2005 and 2035 model network volumes were examined to determine the growth trend for the roadway segments near the site location. MPO model roadway segments referenced in this analysis include:

- South Douglas Road/SW 37th Avenue
- Ponce De Leon Boulevard
- Alhambra Circle

The MPO model growth rate analysis yielded a 0.65 percent (0.65%) growth rate. To provide for a conservative analysis, the five (5) year growth rate of 1.43 percent (1.43%) was applied annually to the existing traffic volumes to attain future (2017) background traffic conditions. The worksheets used to analyze the historic growth trends are included in Appendix E.

Committed Developments

The City of Coral Gables identified no committed developments within the area of the project location at the time this report was prepared.

FUTURE TOTAL TRAFFIC

Future total traffic conditions are defined as the expected traffic conditions in the year 2017 after the opening of the project. It should be noted that it is anticipated that a raised median along Ponce De Leon Boulevard from Catalonia Avenue to Malaga Avenue will be constructed as part of this project, prohibiting left-turn movements at the intersections of Ponce De Leon Boulevard at Catalonia Avenue and University Drive. Therefore, traffic reassignment was assumed based on this expected restriction.

The diversion for this intersection assumed that twenty-five percent (25%) of the eastbound left-turn movement would reroute and perform a right-turn movement. The remaining volumes are expected to be redistributed to other east-west streets in the area. The northbound left-turn volumes were reassigned assuming fifty percent (50%) would be rerouted north and the remaining volumes would perform a northbound left-turn at the intersection of Malaga Avenue and Ponce De Leon Boulevard. The southbound left-turn volumes were assumed to travel south through the intersection of Malaga Avenue and Ponce De Leon Boulevard rerouting to other east-west streets in the area. In addition, this reassignment assumed that the northbound left-turn movement from Ponce De Leon Boulevard to University Drive will be prohibited. Therefore, one hundred percent (100%) of this movement would perform a northbound left-turn at the intersection of Malaga Avenue and Ponce De Leon Boulevard.

Figures 11 and 12 present the future traffic volumes for the weekday A.M. and P.M. peak hours with non-restrictive and restrictive traffic calming measures, respectively. Volume development worksheets for the study intersections are included in Appendix F.

INTERSECTION CAPACITY ANALYSIS

The operating conditions were analyzed for the study intersections. Four (4) scenarios (existing conditions, future background conditions, future total conditions with non-restrictive measures, and future total conditions with restrictive measures) were analyzed using *Trafficware's SYNCHRO 8.0 Software* which applies methodologies outlined in the *Highway Capacity Manual, 2000* and *2010 Edition*. The roundabouts were analyzed using *SIDRA Solutions' SIDRA Intersection 6.0 Software* which applies *HCM 2010* methodologies. Synchro worksheets for the study intersections are included in Appendix G. A summary of the intersection and driveway analyses for the A.M. and P.M. peak hours are presented in Tables 3, 4, and 5. As these tables indicate, all the study intersections are expected to operate at levels of service (LOS) E or better overall during the A.M. and P.M. peak hours with the exception of the following:

- Westbound stop-controlled approach at the intersections of Ponce De Leon Boulevard (NB) at Sevilla Avenue and Palermo Avenue in the P.M. peak hour under future total conditions with non-restrictive and restrictive measures
- Eastbound stop-controlled approach at the intersection of Ponce De Leon Boulevard and Catalonia Avenue in the P.M. peak hours under future background conditions. However, this deficiency is eliminated in the future total conditions, when the eastbound approach is restricted to right-turns only due to the proposed installation of a raised median along Ponce De Leon Boulevard from Catalonia Avenue to Malaga Avenue.
- Eastbound stop-controlled approach at the intersection of Almeria Avenue and SW 37th Avenue/Douglas Road in the A.M. and P.M. peak hour under future total conditions with restrictive measures.
- Southbound stop-controlled approach at the intersection of North Driveway and Palermo Avenue in the P.M. peak hour under future total conditions with non-restrictive measures.

These results are common during peak periods where a high traffic volume free-flowing major street intersects with a stop-controlled minor street.

The westbound stop-controlled approach at the intersections of Ponce De Leon Boulevard (NB) at Sevilla Avenue and Palermo Avenue operate at LOS F in the P.M. peak hour under future total conditions. This result is expected due to both intersections serving as direct access to two (2) main driveways of the proposed site. It should be noted that either intersection is a candidate for signalization as the expected westbound volumes at both intersections, with the proposed development, meet the minimum peak hour volume threshold required to warrant a signal. In addition, based on Miami-Dade County standards, a minimum of 330 feet is required between signalized intersections. Both Palermo Avenue and Malaga Avenue meet the Miami-Dade County signalized intersection spacing standard of 330 feet. Signalization of an intersection is under jurisdiction of Miami-Dade County Public Works and Waste Management Department Traffic Engineering Division (TED). TED will review the intersection to determine if signalization is appropriate and warranted. If TED determines it appropriate and warranted, traffic signalization plans would be required and reviewed by MDCPWM.

The eastbound stop-controlled approach at the intersection of Almeria Avenue and SW 37th Avenue/Douglas Road operates at LOS F in the A.M. and P.M. peak hour under future total conditions with restrictive measures. It should be noted that the intersection is a candidate for signalization as the expected eastbound volumes at the intersection, with the proposed development, meet the peak hour minimum volume threshold needed to warrant a signal. In addition, the intersection meets Miami-Dade County's intersection spacing requirement, as the closest signalized intersection (Andalusia Avenue) to Almeria Avenue is approximately 580 feet to the north.

The southbound stop-controlled approach at the intersection of North Driveway and Palermo Avenue operates at LOS F in the P.M. peak hour under future total conditions with non-restrictive measures. This result is expected due to the high volume of vehicles that will be exiting the driveway. It should be noted that the delay occurs on the southbound stop-controlled approach; therefore, no queues or delays will impact vehicles along Palermo Avenue and will be contained within the site driveway. It is recommended that all-way traffic control be considered at this location to improve operations including a potential roundabout.

Notes: ⁽¹⁾ Overall intersection LOS is not defined, as intersection operates under stop-control conditions.

⁽²⁾ Approach operates under free-flow conditions. LOS is not defined.

MULTIMODAL IMPROVEMENTS

The project plans numerous improvements to improve connectivity and accessibility for alternative modes of travel to reduce the vehicular impacts of the project on the surrounding roadway network. Measures to encourage people to use public transportation, promote bicycling and walking, encourage car/vanpooling and offer alternatives to the typical workday hours are strategies under consideration. The following measures are proposed as part of this project:

- Enhanced sidewalk and pedestrian areas that include wide sidewalks, public art, robust landscaping, covered walkways, and enhanced streetscape features
- Secured bicycle parking areas
- Changing/shower facilities with lockers for bicyclists
- Covered trolley stop shelter along Ponce De Leon Boulevard at Palermo Avenue providing seating and transit information including route schedules and maps

In addition, improvements to the existing trolley service such reduced headways, extended hours, and weekend operations would further encourage site patrons to utilize alternative modes of transportation. As result, the project will consider making a contribution towards trolley service enhancements. The following enhancements are being consistent:

- Extend the existing weekday trolley service which operates until along Ponce De Leon Boulevard to a later hou
- Operate a new Central Business District (CBD) loop route along Alhambra Circle, Merrick Way, Galiano Street, Almeria/Sevilla Avenue, and Salzedo Street during weekday morning, mid-day, and afternoon peak periods.
- Modifications to the current trolley stop locations to improve accessibility to the project site.

CONCLUSIONS

This analysis has addressed traffic-related impacts associated with the proposed Old Spanish Village mixed-use project within Coral Gables, Florida. Based on the results of the analysis, the following is concluded:

- The project is expected to generate 864 new trips during the A.M. peak hour and 1,468 new trips during the P.M. peak hour.
- In order to reduce cut-through traffic and speeds along surrounding local streets east of the site, several overall traffic calming measures are being considered. In general, these measures can be grouped into two (2) categories: non-restrictive and restrictive:
 - Non-Restrictive Measures:
 - Reduction of the pavement width from 36 to 40 feet to approximately 19 feet of pavement allowing for two (2) 9.5-foot travel lanes. The additional area created by this reduction will provide for room for a swale and large shade trees.
 - Construction of mid-block raised center median with paver treatments within the travel lanes.
 - Construction of entry features immediately west of the north-south alley to the west of SW 37th Avenue/Douglas Road where land uses shift from commercial uses to single-family residential homes.
 - Reconstruction of existing roundabouts or installation of raised/tabled intersections along Galiano Street/Malaga Avenue to address existing geometric deficiencies.
 - Restrictive Measures:
 - Construction of north-south median at the intersection of Galiano Street at Sevilla Avenue, prohibiting east-west through movements, the westbound left-turn movement, and the southbound left-turn movement.
 - Construction of north-south median at the intersection of Galiano Street at Palermo Avenue, prohibiting east-west left and through movements, the northbound left-turn movement, and the southbound left-turn movement.

- Construction of north-south median at the intersection of Galiano Street at Malaga Avenue, prohibiting the westbound left-turn movement and the southbound left-turn movement.

Different project traffic distributions were considered for both the non-restrictive and restrictive measures.

- Intersection capacity analyses indicate that the study intersections are expected to operate at levels of service (LOS) E or better during the A.M. and P.M. peak hours under all analysis conditions with exception of the following:
 - The westbound stop-controlled approach at the intersections of Ponce De Leon Boulevard (NB) at Sevilla Avenue and Palermo Avenue operate at LOS F in the P.M. peak hour under future total conditions with both traffic calming plans. Both intersections are candidates for signalization as the expected westbound volumes at both intersections, with the proposed development, meet the peak hour minimum volume threshold and meet the Miami-Dade County signalized intersection spacing standard of 330 feet. Signalization of an intersection is under jurisdiction of Miami-Dade County Public Works and Waste Management Department Traffic Engineering Division (TED). TED will review the intersection to determine if signalization is appropriate and warranted. If TED determines it appropriate and warranted, traffic signalization plans would be required and reviewed by MDCPWM.
 - Eastbound stop-controlled approach at the intersection of Ponce De Leon Boulevard and Catalonia Avenue in the P.M. peak hour under future background conditions. However, this deficiency is eliminated in the future total conditions, when the eastbound approach is restricted to right-turns only.
 - The eastbound stop-controlled approach at the intersection of Almeria Avenue and SW 37th Avenue/Douglas Road operates at LOS F in the A.M. and P.M. peak hours under future total conditions with restrictive measures. The intersection is candidate for signalization as the expected eastbound volumes at the intersection, with the proposed development, meet the peak hour minimum volume threshold and meet Miami-Dade County's intersection spacing requirement of 330 feet.

- The southbound stop-controlled approach at the intersection of North Driveway and Palermo Avenue operates at LOS F in the P.M. peak hour under future total conditions. This result is common during peak periods where a high traffic volume free-flowing major street intersects with a stop-controlled minor street. In addition, this result is expected due to the high volume of vehicles that will be exiting the driveway; however, these queues/delays will not impact vehicles along Palermo Avenue. It is recommended that all-way traffic control be considered at this location to improve operations including a potential roundabout.
- The project plans numerous improvements to improve connectivity and accessibility for alternative modes of travel including the following:
 - Enhanced sidewalk and pedestrian areas that include wide sidewalks, public art, robust landscaping, covered walkways, and enhanced streetscape features
 - Secured bicycle parking areas
 - Changing/shower facilities with lockers and bicyclists
 - Covered trolley stop shelter along Ponce De Leon Boulevard at Palermo Avenue providing seating and transit information including route schedules and maps
 - The project will also consider making a contribution towards trolley service enhancements. The following enhancements are being considered:
 - Extend the existing weekday trolley service which operates until along Ponce De Leon Boulevard to a later hour
 - Operate a new Central Business District (CBD) loop route along Alhambra Circle, Merrick Way, Galiano Street, Almeria/Sevilla Avenue, and Salzedo Street during weekday morning, mid-day, and afternoon peak periods.
 - Modifications to the current trolley stop locations to improve accessibility to the project site.

Subject: Old Spanish Village – Traffic Impact Analysis Methodology

This memorandum summarizes our traffic impact study methodology for the proposed mixed-use development known as Old Spanish Village. The project site is located in Coral Gables, Florida between Ponce De Leon Boulevard (west), Galiano Avenue (east), Sevilla Avenue (north) and Malaga Avenue (south). The proposed development plan provides for a mix of land uses. The following development plan is currently proposed:

- 255,000 square feet of retail space
- 210,000 square feet of office space
- 20 residential townhouses
- 214 high-rise residential condominiums
- 200-room hotel
- 27,000 square feet of restaurant
- 9,500 square-foot gym/fitness club
- 13,000 square-foot day care center
- 9-screen movie theatre

Primary access to the site is proposed via parking garage entrances/exits on Sevilla Avenue, Palermo Avenue and Malaga Avenue. Access to the residential condominiums/townhouses is proposed via an internal roadway network along the west side of the site. Additional drop-off/pick-up driveways are provided for the hotel, movie theatre, and other retail uses within the site. However, all parking is accessed via driveways along Sevilla, Palermo, and Malaga Avenues. The following study parameters are proposed:

Data Collection

Turning movement counts will be collected during the A.M. peak period (7 a.m. to 9 a.m.) and the P.M. peak period (4 p.m. to 6 p.m.) on a typical weekday (Tuesday, Wednesday, or Thursday). Turning movement counts will be conducted at the following nineteen (19) intersections:

- SW 22nd Street/Coral Way and Ponce De Leon Boulevard
- Andalusia Avenue and Ponce De Leon Boulevard
- Valencia Avenue and Ponce De Leon Boulevard
- Almeria Avenue and Ponce De Leon Boulevard
- Sevilla Avenue and Ponce De Leon Boulevard (Southbound)
- Sevilla Avenue and Ponce De Leon Boulevard (Northbound)
- Palermo Avenue and Ponce De Leon Boulevard (Southbound)
- Palermo Avenue and Ponce De Leon Boulevard (Northbound)
- Catalonia Avenue and Ponce De Leon Boulevard
- University Drive and Ponce De Leon Boulevard
- Malaga Avenue and Ponce De Leon Boulevard
- Sevilla Avenue and Le Jeune Road
- Catalonia Avenue and Le Jeune Road
- Palermo Avenue and Le Jeune Road
- University Drive and Le Jeune Road
- Valencia Avenue and Galiano Street
- Valencia Avenue and SW 37th Avenue
- Almeria Avenue and SW 37th Avenue
- Coconut Grove Drive and SW 37th Avenue

Turning movement counts performed previously as part of a previous analysis for the neighborhood east of the site will be utilized as part of this scope of services. All traffic counts will be adjusted to account for seasonality using the appropriate FDOT seasonal factors. Signal timing information will be obtained from Miami-Dade County Public Works and Waste Management Department – Traffic Signals and Signs Division. All background documentation collected will be provided in the Appendix of the traffic impact study. The locations of the proposed turning movement counts and the previously collected turning movement counts are provided in Figure 1 as Attachment A.

Trip Generation

A trip generation analysis was conducted using the Institute of Transportation Engineers (ITE) *Trip Generation*, 9th Edition for the proposed development plans. The analysis assumed the following ITE Land Use Codes (LUC):

- ITE LUC 820 – Shopping Center
- ITE LUC 710 – General Office Building
- ITE LUC 230 – Residential Condominium/Townhouse
- ITE LUC 232 – High-Rise Residential Condominium/Townhouse
- ITE LUC 310 – Hotel
- ITE LUC 492 – Health/Fitness Club
- ITE LUC 565 – Daycare Center
- ITE LUC 445 – Multiplex Movie Theatre

For purposes of trip generation calculations, the restaurant and retail uses were grouped together and treated as ITE LUC 820 – Shopping Center in order to provide the highest trip generation for the

proposed development. A portion of the trips generated by the development will be captured internally on the site. Internal capture trips were determined based upon values contained in the Institute of Transportation Engineers' (ITE), *Trip Generation Handbook*, June 2004. The internal capture rate for the proposed development ranged from 12.7 percent to 14.0 percent depending on the analysis period. Internal capture volumes were subtracted from the gross project trips to determine the external trips for the site. Refer to Attachment A for detailed trip generation calculations.

Additionally, a portion of the retail trips are considered pass-by trips rather than new trips on the roadway network. The Trip Generation Handbook documents pass-by trip reductions for ITE LUC 820. The applicable pass-by reduction rates were applied the external project trips. Refer to Attachment A for detailed trip generation calculations.

In addition, a 10 percent multimodal reduction factor was applied to the driveway volumes. This reduction factor is intended to capture the characteristics of the urban environment in which the project site is located. It is anticipated that area visitors/employees/residents and will travel to/from the site on foot, via bicycle, and on transit.

Table 1 summarizes the projected net new external vehicular trips associated with the proposed development. The trip generation calculations have been provided in Attachment B.

Table 1: Project Trip Generation Summary			
Analysis Period	Net New External Trips		
	Entering	Exiting	Total
A.M. Peak Hour	504 vph	238 vph	743 vph
P.M. Peak Hour	546 vph	766 vph	1,312 vph

Trip Distribution

Trip distribution will be determined using the cardinal distribution from the appropriate Traffic Analysis Zone (TAZ) in the Miami-Dade County's MPO 2035 *Cost Feasible Plan*, traffic characteristics within the study area, and the traffic calming plan within the residential neighborhood east of the site. The appropriate TAZ for this majority of this development is 1061. The traffic impact study will include graphics of the project traffic assignment for the project's driveways and the study intersections. The trip distribution has been provided in Attachment C.

Background Growth Rate/Major Committed Development

A background growth rate will be calculated based on historic growth trends at nearby Florida Department of Transportation (FDOT) traffic count stations. Additionally, growth rates based on Miami-Dade Metropolitan Planning Organization's (MPO) projected 2005 and 2035 model network volumes will be examined. Documentation will be provided in the Appendix of the traffic impact study.

This methodology assumes that any traffic impact studies for 'approved but not yet constructed' developments within the vicinity of the project site will be provided by the City in a timely manner to be included in the analysis.

Capacity Analysis

Capacity analyses will be conducted for the A.M. and P.M. peak hours for the twenty-two (22) study intersections and project driveways. Intersection analyses will be performed using *Synchro 8.0* traffic engineering analysis software which applies Highway Capacity Manual (HCM) 2010 methodology. Capacity analyses will be conducted for four (4) scenarios: existing, future without project, future with project assuming existing traffic calming and future with project assuming proposed traffic calming alternatives. The build-out year will be specified in the analysis. If intersection capacity deficiencies are identified, strategies and improvements may be developed to attain acceptable levels of service. Improvements such as providing bicycle parking facilities may be considered.

The following figures will be included for the study intersections:

- Existing conditions
- Trip distribution
- Trip assignment
- Future background traffic conditions (with growth rate and committed development traffic)
- Future total traffic conditions (with project)

Documentation

The results of the traffic analysis will be summarized in a report. The report will include supporting documents including signal timings, lane geometry, and software output sheets. The report will also include text and graphics necessary to summarize the assumptions and analysis. If intersection capacity deficiencies are identified, strategies and improvements will be developed to attain adopted levels of service.

A CD and electronic copy of the reports will be provided as part of the submittal package. Additionally, the Synchro analysis files will be provided on the CD. The submittal package will also include the latest site plan to scale.

Methodology Concurrence

Please note that if the City does not agree with the proposed traffic impact analysis methodology contained herein, *please respond with concerns by May 27, 2014*, so we will have adequate time to prepare the analysis.

Intersection	411	3.0		0.173		4.8	LOS A	0.7	17.1				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

LEVEL OF SERVICE

 **Site: Coconut Grove Drive and Malaga Avenue**

Existing AM
Roundabout

All Movement Classes

	South	East	North	West	Intersection
LOS	A	A	A	A	A

Level of Service (LOS) Method: Delay & v/c (HCM 2010).
Roundabout LOS Method: Same as Sign Control.
Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

Intersection	473	3.0		0.229		5.1	LOS A	0.9	24.1				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

^d Dominant lane on roundabout approach

Intersection	382	3.0		0.148		4.6	LOS A	0.6	14.1				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Intersection	310	3.0		0.109		4.3	LOS A	0.4	10.0				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Intersection	434	3.0		0.183		4.9	LOS A	0.7	18.3				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Intersection	403	3.0		0.157		4.7	LOS A	0.6	15.2				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Intersection	872	3.0		0.315		6.8	LOS A	1.4	35.0				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

LEVEL OF SERVICE

 **Site: Coconut Grove Drive and Malaga Avenue**

Future Total AM with Restrictions
Roundabout

All Movement Classes

	South	East	North	West	Intersection
LOS	A	A	A	A	A

Level of Service (LOS) Method: Delay & v/c (HCM 2010).
Roundabout LOS Method: Same as Sign Control.
Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

Intersection	657	3.0		0.265		5.8	LOS A	1.1	28.2				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

^d Dominant lane on roundabout approach

Intersection	727	3.0		0.278		6.0	LOS A	1.2	31.3				

Level of Service (LOS) Method: Delay & v/c (HCM 2010).

Roundabout LOS Method: Same as Sign Control.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: US HCM 2010.

HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.

Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

^d Dominant lane on roundabout approach

**Subject: *Mediterranean Village Parking Demand Reduction Analysis
Response to City Comments Received January 23, 2015***

Introduction

On January 23, 2015, City comments on the Planning and Zoning Board submittal were received from various departments and consultants including: Planning and Zoning (Ramon Trias and Charles Wu), David Plummer & Associates, City Engineer (Yamilet Senespleda), Parking (Kevin Kinney), and Fire (Robert Lowman). This memorandum provides responses to the comments received on January 23, 2015 for the updated Parking Demand Reduction Analysis.

1/23/15 Comments and Responses

PZB Submittal Comments by Ramon Trias dated 1/15/15

1) Shared Parking Methodology – This document requires further analysis.

- a) Day care is an accessory use – parking should not be required.
Response – Concur understanding day care users will be internal to the project. However, parking spaces for day care employees has been maintained.
- b) Office, Hotel, and Retail types selected for the shared parking study do not reflect the types of Office, Hotel, and Retail described in the Development Agreement.
Response – Time of day factors for each land use has been obtained from ULI Shared Parking, 2nd edition as follows: Office – base type (no alternate), Hotel – Business type, Retail – shopping center-typical type.

Shared Parking Comments by Charles Wu dated 1/20/15

Comment 1

The parking for residential at the entire 7th level and partial 6th level are self-park and reserved, according to a memo from Mark Santos to Glenn Kephart dated Jan. 7, 2015 and submitted as part of the latest package. The self-park statement is inconsistent with the separate valet analysis that states all residential parking is 100% valet.

Response – All residential parking shall be self-park as noted in Parking Operations Narrative. 100% of visitors for residential parking will utilize valet parking on Level B2. Parking Operations Narrative has been updated accordingly.

Comment 2

If the first statement is correct, all those spaces, which are not specified how many, should be taken out of the shared parking total number, as those reserved spaces are no longer “shared” with the other uses.

Response – Residential parking spaces are not included in the shared parking analysis. Visitor parking for residential use is included in the shared parking analysis, and these associated vehicles will be valet parked on Level B2.

DPA Comments – Parking Analysis dated 1/21/15

Bullet 1

The revised development program shows the restaurant use has been split into 75% Family type and 25% Fine type. This split is inconsistent with the development program used for the traffic study and queuing analysis that show 75% Quality Restaurant and 25% High-turnover (sit down) restaurant. The analysis should be revised accordingly.

Response – The shared parking analysis has been revised for consistency with traffic study, including 75% split for Fine (ITE – Quality 931) and Casual (ITE – High Turnover with Bar 932) types and 25% split for Family type (ITE – High Turnover without Bar).

Bullet 2

The study uses a 10% modal split reduction for employees/residents and 5% for visitors. These percentages are not consistent with the percentages previously recommended as acceptable (8% employees/residents and 4% visitors), which is the average from 2009-2013. The analysis should be revised accordingly.

Response – The 2012 American Community Survey Miami-Dade Profile dated September 2013 (see Appendix C) provides Commuting to Work section provides percentages of each mode. This study has considered the modes of public transportation, walked, and other means to determine the percentage of employees not utilizing a vehicle and therefore not requiring a parking space. The associated total mode split was 9.3% in 2010, 9.4% in 2011, and 10.1% in 2012 resulting in an average of 9.6%. The updated shared parking analysis has been updated for a 9.6% mode split employees/residents and 4.8% visitor mode split (1/2 of employee/resident).

Bullet 3

The shared parking calculation in Appendix B needs to be updated based on the above comments.

Response – Comments under bullet 1 and 2 have been addressed in updated shared parking calculation.

**Parking Operations Document and Parking Demand Reduction Comments by Kevin Kinney–
Parking Analysis dated 1/21/15**

Comment 6

The Parking Operations Narrative requires further development and should be an attachment to or incorporated in the Development Agreement.

Response – The Parking Operations Narrative is a continuing work in progress and will be further developed and coordinated with the City.

12/19/14 Comments and Responses

Bullet 1

The residential parking spaces should not be part of the shared parking analysis. Based on discussions with the applicant today, they will propose to share some of the visitor parking spaces for the residential use.

Response 1 – Residential parking spaces (townhome, 2BR, and 3BR units) will not be considered for shared parking, where occupancy of all residential spaces will be 100%. Visitor parking associated with residential uses will utilize shared parking in line with ULI Shared Parking time of day occupancy percentages.

Bullet 2

The analysis should use the latest US Census Bureau survey info (2009-2013) for Miami-Dade County (MDC). The analysis can use the public transit, walking, and bicycling info for MDC, which is a mode split of approximately 8%. Using an 8% mode split for employees/residents and a 4% mode split is acceptable.

Response 2 – The 2012 American Community Survey Miami-Dade Profile dated September 2013 provides Commuting to Work values of 5.9% transit, 2.4% walked, and 1.8% other means resulting in a total of 10.1%. Other means category has been included to account for transportation modes such as bicycling and drop-off/pick-up. The updated shared parking analysis utilizes 10% mode split employees/residents and 5% visitor mode split (1/2 of employee/resident).

Bullet 3

A parking operations plan should be submitted to the City's Public Works and Parking Departments for review.

Response 3 – Under separate deliverable, Kimley-Horn in coordination with RTKL, has provided the requested parking operations plan.

Bullet 4

The applicant needs to provide CADD drawings of all roadways, access points, valet areas, and parking garage levels within and adjacent to the project for review.

Response 4 – Under separate deliverable, Kimley-Horn in coordination with RTKL, has provided the requested CADD drawings.

Bullet 5

A queuing analysis is needed at all valet drop-off/pick-up areas.

Response 5 – Under separate cover, Kimley-Horn has provided the requested queuing analysis.

Additional Item

Overall program values remain consistent with previous parking demand analysis, however Restaurant use has been split into 75% Family type and 25% Fine type, based on ULI Shared Parking categorizations.

8/4/14 and 10/1/14 Comments and Responses**Comment 1 – page 4: Modal Split Concept**

Modal split adjustments should be taken on each individual land use. Either data or assumptions should be provided to justify the percent reduction. The procedures outlined in ULI Shared Parking, 2nd Editions should be followed.

Response 1 – We recommend using an average modal split (10%) versus specific to each use, similar to the Traffic Impact Analysis. Note the average modal split has been applied to all uses with the exception of residential. It is our professional opinion that determining site specific modal splits between visitor and employee or resident for each of the proposed land uses is not necessary and beyond typical levels of shared parking analysis. We are not aware of other municipalities requiring this level of requested detail.

DPA Response: Consistent with ULI procedures, modal split should be applied to each individual land use. As described in ULI, some ridership, drop-offs, and walking are inherent in the base parking ration. Therefore, using a global 10% reduction will amount to double counting.

Response 1A – ULI Shared Parking Chapter 3 Step 5: Adjust Ratios for Modal Split and Person per Car states the ratios recommended in this book are intended to reflect conditions in suburban settings with little or no transit and with minimal employee ridesharing. In addition, it is stated that ridesharing, drop-offs, and walking are inherent in the base ratios for employee parking and mode adjustments are intended for significant changes in modal split or persons per car. Therefore, it is our understanding that applying a mode split will not result in double counting.

The mode split utilized in the shared parking analysis has been updated to provide separate mode splits for employees/residents and visitors. ULI Shared Parking Table 3-1 Examples of Journey-to-Work Data lists examples of transportation modes information provided by the 2000 U.S. Census Bureau. The mode split for employees/residents is based upon the U.S. Census Bureau, 2008-2012 American Community Survey (ACS) Population Survey for the City of Coral Gables and is provided in Appendix C. Over 82% of workers over the age of 16 were noted to park a vehicle at their work via driving, carpooling, or by motorcycle. The updated shared parking analysis utilizes 18% mode split employees/residents and 9% visitor mode split (1/2 of employee/resident).

Comment 2 – page 4: Internal Capture

The concept of internal capture does not apply to shared parking principles. Even though internal capture reductions were not taken, it should not be referred to as a “conservative” approach.

Response 2 – Memo has been updated to remove “conservative” approach and reasoning to exclude internal capture concept that is in conflict with shared parking.

DPA Response: Comment resolved.

Comment 3 – page 17; Project Research

Please verify the land uses and development program for the four comparable sites provided. For example, the Shops at Sunset Place which is mostly a retail center shows apartment and hotel uses. Also, comparable projects should only include existing sites where actual parking occupancy data could be verified.

Response 3 – Project site information provided was obtained from mall project fact sheets, and have been included as Appendix B in the updated report.

DPA Response: Information provided for Shops at Sunset Place is still inaccurate.

Response 3A – Information presented is based on mall information that is available to public. Shops at Sunset Place will be removed.

Comment 4 – page 20; Table – Parking Ratio

Please specify how the parking ratio was determined for Cinema and Gym uses.

Response 4 – Indoor recreation/entertainment category was obtained from City of Coral Gables Zoning Code Section 5-1409 Amount of required parking, resulting in 1 space per 300 SF.

DPA Response: Comment resolved.

Comment 5 – page 20; Table – Trip Reductions

Please see Comment 1 regarding modal split reductions.

Response 5 – Refer to Response 1.

DPA Response: Please refer to our response to Comment 1.

Response 5A – Refer to Response 1A.

Comment 6 – page 21; Table – Single Use Parking Calculations

Please calculate the single use parking requirements without the trip reduction factors.

Response 6 – Table has been updated to separately calculate single use parking requirements and parking requirements with trip reduction parking. Appendix B has been provided to include parking calculations.

DPA Comment: The format of the table is acceptable. However, the numbers have to be updated based on previous comments.

Response 6A – Table has been updated with comments addressed in this memo.

Comment 7 – page 21; Table – Time of Day Trends

- The table should be expanded to provide time-of-day factors for customer, visitors and employees.
- The restaurant use should be broken into specific type of restaurants (fine dining, family or fast food) since each has different time-of-day factors.
- Please provide back-up data or source for the daycare time-of-day factors.

Response 7 – Table has been expanded to include time-of-day factors for customer, visitors, and employees. Restaurant use has been specified to family type restaurants, as defined by ULI Shared Parking, 2nd Edition. Daycare time-of-day factors input were assumptions based upon peak times noted in ITE Parking Generation (Land Use: 565 Day Care Center). Appendix B has been provided to include parking calculations.

DPA Comment: The format of the table and back up data is acceptable. However, the percentages provided for Office-Visitors do not match percentages provided by ULI. Please explain.

Response 7A – Office visitor time of day percentages has been updated to match ULI Shared Parking Table 2-5 Time-of-Day Factors for Weekdays.

Comment 8 – page 22; Shared Parking Calculations

Please update calculations based on comments above.

Response 8 – Shared Parking Calculations have been updated with responses provided in this memo. Appendix B has been provided to include parking calculations.

DPA Comment: This table needs to be updated once all comments are addressed.

Response 8A – Table has been updated with comments addressed in this memo.

Comment 9 – page 22; Table – Peak Parking Demand

Please update calculations based on comments above. Also include a section in the table clearly showing the required number of parking spaces by city code and the proposed number of parking spaces based on shared parking principles as well as the percent reduction.

Response 9 – Shared Parking Calculations have been updated with responses provided in this memo. Required number of spaces per city code and proposed parking reduction, including percentage, has been included. Appendix B has been provided to include parking calculations.

DPA Comment: This table needs to be updated once all comments are addressed.

Response 9A – Table has been updated with comments addressed in this memo.

10/1/14 Comments and Responses

Comment 10 – General Comment

The main purpose of the report is to justify the reduction of parking at the proposed development. However, the report provides extensive background information but relegates the shared parking analysis to a table in the appendix with little or no information on the procedures and assumptions used in the analysis. At a minimum, a section should be added to the report that clearly states the procedures and specific assumptions used in the analysis (i.e. type restaurant, type of hotel, whether residential parking is being shared, etc.)

Response 10 – New section Parking Reduction Methodology has been included to provide a narrative on the procedures and assumptions used in the analysis.

Comment 11 – Appendix B – Parking Reduction Calculations – Section 4 (Parking Calculation)

Please provide a column showing the parking calculation for Visitors and Employees/Residents separate for each land use. These are the parking numbers used in the rest of the tables yet they are not shown anywhere in the analysis.

Response 11 – Table has been updated showing column with parking calculation for visitors and employees/residents.

Comment 12 – Appendix B – Parking Reduction Calculations – Section 4 (Parking Calculation)

Please verify the number of parking spaces for hotel use.

Response 12 – Hotel numbers have been verified, including rounding confirmation.

Comment 13 – Appendix B – Parking Reduction Calculations – Section 6 (Time of Day Trends)

Please verify the percentages used for Office/Visitors.

Response 13 – Office visitor time of day percentages has been updated to match ULI Shared Parking Table 2-5 Time-of-Day Factors for Weekdays.

Comment 14 – Appendix B – Parking Reduction Calculations – Section 7 (Shared Parking Calculation)

Please verify the parking calculation for Office/Visitors and Office/Employees.

Response 14 – Office visitor time of day percentages has been updated to match ULI Shared Parking Table 2-5 Time-of-Day Factors for Weekdays.

Comment 15 – Appendix B – Parking Reduction Calculations – Section 7 (Shared Parking Calculation)

This table contains multiple rounding errors. Please note that we could “not” (text added) do a complete review of this table because the numbers used in the analysis are not provided (see Comment 11).

Response 15 – Proper rounding of numbers has been verified and updated.

Comment 16 – Appendix B – Parking Reduction Calculations – Section 8 (Peak Parking Demand)

This table shows that a trip reduction was not taken for residential uses yet the calculation shows a 10% reduction. Please explain.

Response 16 –The mode split utilized in the shared parking analysis has been updated to provide separate mode splits for employees/residents and visitors. Shared parking and mode split (or trip reductions) has been applied to residents occupying 2BR and 3BR units. Townhouse parking has remained as reserved type parking.

Parking Demand Reduction Analysis

Subject: Mediterranean Village Parking Demand Reduction Analysis

INTRODUCTION

On May 8, 2014, a Mediterranean Village project workshop was held at the City of Coral Gables Development Services Department, where an agenda item included status of the parking demand reduction analysis. On May 16, 2014, a Parking Reduction Methodology draft memorandum was submitted to the City of Coral Gables by Kimley-Horn.

On June 13, 2014, a Mediterranean Village project workshop was held at the City of Coral Gables City Commission Chambers, where concepts of parking demand reduction, including shared parking were discussed. Subsequently, the Parking Demand Reduction Analysis dated July 3, 2014 was provided to the City of Coral Gables for review. Comments on the analysis were received from David Plummer & Associates dated August 4, 2014 and were addressed in the report dated August 20, 2014 (2nd submission) and in a comments responses memorandum submitted.

Comments on the analysis 2nd submission were received from David Plummer & Associates dated October 1, 2014 and were responded to via separate memorandum and this updated Parking Reduction Analysis dated August 20, 2014.

On December 18, 2014, a meeting with Planning & Zoning staff meeting was held to discuss comments on the project. Subsequently, David Plummer & Associates (DPA) provided comments on Traffic Impact Analysis and Parking Demand Reduction Analysis dated December 19, 2014. A comments response memorandum has been submitted separately addressing parking demand reduction analysis. An updated Parking Reduction analysis dated January 12, 2015 was submitted.

On January 23, 2015, City comments on the Planning and Zoning Board submittal were received from various departments and consultants including: Planning and Zoning (Ramon Trias and Charles Wu), David Plummer & Associates, City Engineer (Yamilet Senespleda), Parking (Kevin Kinney), and Fire (Robert Lowman). A comments response memorandum has been submitted separately addressing parking demand reduction analysis.

This memorandum provides the analysis supporting the proposed parking demand reduction and is divided in the following sections:

- Shared Parking Concept
- Zoning Ordinance Research
- Project Research
- Parking Reduction

The parking demand reduction analysis utilizes the Mediterranean Village plans produced by RTKL. The proposed development plan provides for a mix of land uses and is listed as follows:

- 242,000 square feet of retail space
- 314,000 square feet of office space
- 15 residential townhouses
- 214 high-rise residential condominiums
- 184-room hotel
- 29,000 square feet of restaurant (separated into 75% family type and 25% fine type)
- 9,500 square foot gym/fitness club
- 12,000 square foot day care center
- 32,000 square feet of movie theatre - Phase 1 with 3 screens, 290 seats (updated square footage and seats)

SHARED PARKING CONCEPT

The parking reduction analysis implements the concept of shared parking, where a parking facility accommodates the parking demands of multiple adjacent land uses without preventing each individual use's ability to provide parking for its patrons. The shared nature of this concept reduces the number of parking spaces required and subsequently reduces the size of the project's parking garage, and utilizes the space more efficiently. Shared parking is dependent upon the user groups and the associated peak hour demand.

In this concept, parking spaces are shared by the group of patron serviced by the parking facility rather than parking spaces being assigned to them. In many instances, users of a parking facility arrive and leave at differing times, do not stay for as long as other users, or utilize alternative modes of transportation. Ultimately, the demand for parking spaces does not equal the amount of users at any given time.

Shared parking can be applied in many situations. It is particularly appropriate where:

- ❖ Land values and parking facility costs are significant
- ❖ Grouped development is proposed
- ❖ Overbuild of parking is a possibility

The parking demands of the adjacent uses vary by hour, by day, or by season. Due to the variance in peak demand times, the parking facility is able to adequately serve the demands of the adjacent uses with less than the maximum parking spaces needed to serve the adjacent on an individual basis in private parking facilities. Ultimately, the concept of shared parking focuses on the peak parking

demand based on user peak times as opposed to considering that the entire parking demand from all users are consistently present at any time.

The table below provides typical peak timeframes for various uses and is an excerpt from *Shared Parking: Sharing Parking Facilities Among Multiple Users*, Victoria Transport Policy Institute (VTPI).

Weekday Peaks	Evening Peaks	Weekend Peaks
Banks	Auditoriums	Religious Institutions
Schools	Bars and Clubs	Parks
Medical Clinics	Meeting Halls	Shops and Malls
Offices	Restaurants	
Professional Services	Theaters	

As an example, reference hypothetical development scenario below:

Development Description: A moderate sized mixed-use development containing office, retail, and residential uses.			
Land Use	Units	Parking Demand Ratio	Stand-alone Parking Requirement
Office	90,000 Sq. Ft.	4 spaces / 1,000 Sq. Ft.	360 spaces
Retail	10,000 Sq. Ft.	4 spaces / 1,000 Sq. Ft.	40 spaces
Residential	165 dwelling units	1.5 spaces / Unit	250 space
Total: 650 spaces			

The following graphs illustrate the typical parking accumulation patterns for a mix of office, retail, and residential uses. The patterns for office and retail have opposite peaks, while office/retail and residential are virtually inverse of each other.

Through the application of shared parking, the 650-space demand for the uses can be minimized by several hundred spaces. A parking demand reduction of 250 spaces can be applied.

Shared Parking Technical References

Shared Parking 2nd Edition, Urban Land Institute (ULI)

Shared Parking is considered as one of the most comprehensive resources in the parking industry in addressing the concept of shared parking. This reference contains an introduction to shared parking, methodology, and specific values for parking demand ratios for various land uses. This reference also contains specific user parking adjustment factors for different months, time of day during weekdays (6 a.m. to 12 a.m.), and time of day during weekends (6 a.m. to 12 a.m.)

Shared Parking: Sharing Parking Facilities Among Multiple Users, Victoria Transport Policy Institute (VTPI)

Per the VTPI website (www.vtpi.org), VTPI is an independent research organization dedicated to developing innovative and practical solutions to transportation problems. *Shared Parking* provides information on techniques for sharing parking facilities among various users to increase efficiency. Parking occupancy rates per user group is provided.

Modal Split Concept

The modal split concept considers the use of alternative modes of transportation to personal vehicles, including bicycling, walking, and transit. Accessibility, convenience, and pricing of alternate modes of transportation directly affect the extent of associated parking demand reduction.

In order to account for the urban environment in which the project site is located, Kimley-Horn has considered the use of a multimodal reduction (public transit, bicycle, and pedestrian) to the various proposed uses. It is expected that employees, nearby residents, and guests in adjacent hotels will choose to walk to the proposed development. It is also anticipated that hotel guests within the development will walk to the adjacent retail stores, other restaurants, and local places of interest. Additionally, it is expected that a portion of the trips including employee trips will utilize transit. Further information is provided in the section titled Parking Reduction Methodology.

Internal Capture Concept

Internal capture is expected between the complementary land uses within a project where trips are trips made among the on-site uses. Through the Traffic Impact Analysis conducted separately by Kimley-Horn, internal capture trips for the project during A.M. and P.M. peak periods were determined based upon methodology contained in the ITE's, *Trip Generation Handbook*, 2nd Edition June 2004.

Upon further investigation, internal capture between the various uses has not been applied to parking reduction based on conflicts with the shared parking concept.

Internal Capture Technical References

Trip Generation Handbook, 2nd Edition, Institute of Transportation Engineers (ITE)

Per ITE.org, This recommended practice provides guidelines for application and interpretation of trip generation data. Topics covered in the handbook include guidelines for estimating site trip generation, collecting local trip generation data, developing local trip generation rates, estimating pass-by trips and estimating trip generation for multiuse land developments.

Report 684 Enhancing Internal Trip Capture Estimation for Mixed-Use Developments, 2011, National Cooperative Highway Research Program (NCHRP)

Per the Foreword section of this reference, this report provides an improved methodology to estimate how many internal trips will be generated in mixed-use developments—trips for which both the origin and destination are within the development. The methodology estimates morning and afternoon peak-period trips to and from six specific land use categories: office, retail, restaurant, residential, cinema, and hotel.

Notably, a Districtwide Trip Generation Study was conducted by FDOT in March 1995 where six mixed-use sites in Florida were surveyed. The tables obtained from this report are provided below showing the user groups and resulting daily internal capture rates.

Table 5. Characteristics of mixed-use sites surveyed by FDOT.						Table 6. Daily internal capture rates at FDOT sites.	
Mixed-Use Site	Site Size (acres)	Office (sq ft)	Commercial (sq ft)	Hotel (rooms)	Residential (units)	Mixed-Use Development Site	Internal Capture Rate
Crocker Center	26	209,000	87,000	256	0	Crocker Center	41%
Mizner Park	30	88,000	163,000	0	136	Mizner Park	40%
Galleria Area	165	137,000	1,150,000	229	722	Galleria Area	38%
Country Isles	61	59,000	193,000	0	368	Country Isles	33%
Village Commons	72	293,000	231,000	0	317	Village Commons	28%
Boca Del Mar	253	303,000	198,000	0	1,144	Boca Del Mar	33%
						Average	36%

ZONING ORDINANCE RESEARCH

Parking Reduction

Various zoning ordinances have been researched to identify municipalities that currently address parking reduction. South Florida, other areas within Florida, and regions outside of Florida have been included in the research. Twelve (12) municipalities were identified to contain zoning ordinances that addressed parking reductions, including:

- Five (5) South Florida municipalities: Miami, Miami Beach, Fort Lauderdale, Broward County, West Palm Beach
- Four (4) Florida municipalities: Sarasota, St. Petersburg, Tampa, Orlando
- Three (3) National municipalities: Greensboro, NC, San Antonio, TX, Fort Collins, CO

The zoning ordinance content addressing parking reductions varied from a simplified calculation with municipality provided parking reduction values to a comprehensive study to determine project specific parking reduction values. The table below provides a summary of the types of parking reduction identified from the various municipalities.

Parking Reduction Type Summary			
City Provided Reduction Values	ULI Reduction Values	General	Project Specific
FLORIDA			
Miami	Orlando	Tampa	Miami
Miami Beach			Fort Lauderdale
West Palm Beach			Broward County
St. Petersburg			Sarasota
NATIONAL			
Greensboro, NC		Fort Collins, CO	
San Antonio, TX			

The table below provides a summary of findings including municipality location, zoning code section, and specific requirements listed for parking reductions.

Parking Demand Reduction and Shared Parking – Florida Municipalities																																									
Municipality (2012 US Census Population)	Code Section	Parking Reduction Content	Comments																																						
1. Miami (413,892)	Miami 21 Article 4 Table 5 Building Function: Parking and Loading	Provided chart allows parking reduction of two uses by applying a reduction factor to the lesser parking demand of each use. Reduced lesser demand (#1) is then added to larger base demand (#2). Additional sharing is by Warrant.	More than 2 uses would require additional studies and pursuit through warrant.																																						
<div><div><div>MIAMI 21</div><div>AS ADOPTED - APRIL 2012</div></div><div>ARTICLE 4. 2. Miami Beach (90,588)	Subpart B - LAND DEVELOPMENT REGULATIONS Chapter 130 - OFF-STREET PARKING ARTICLE VIII. SHARED PARKING Sec. 130-221. Requirements.	Two or more uses shall be permitted to share the same required off-street parking spaces in a common parking facility on the same lot if the hours or days of peak parking for the uses are so different that a lower total will provide an adequate number of spaces for all uses served by the facility, according to the following table.	Simplified analysis with parking occupancy percentages per time of day per user group.																																						

Sec. 130-221. Requirements.

Two or more uses shall be permitted to share the same required off-street parking spaces in a common parking facility on the same lot if the hours or days of peak parking for the uses are so different that a lower total will provide an adequate number of spaces for all uses served by the facility, according to the following table.

	Weekdays		Weekends		
	Daytime (6:00 a.m.— 6:00 p.m.) (percent)	Evening (6:00 p.m.— 6:00 a.m.) (percent)	Daytime (6:00 a.m.— 6:00 p.m.) (percent)	Evening (6:00 p.m.— midnight) (percent)	Nighttime (midnight— 6:00 a.m.) (percent)
Office or banks	100	5	10	5	5
Retail	60	20	80	60	5
Hotels	50	60	60	100	75
Restaurant	50	75	75	90	10
Theatre	10	70	20	90	10
Nightclubs	5	50	5	100	90
Other uses	100	100	100	100	100

(1) Method of calculation:

- a. Step 1: For each of the five time periods, multiply the minimum number of parking spaces required by sections 130-32, 130-33 and 130-34.
- b. Step 2: Add the results of each column. The required number of parking spaces shall equal the highest column total.

(2) The land uses served by the shared parking facility shall be in single ownership or unity of title or long term lease.

3. Ft. Lauderdale (170,747)	Unified Land Development Code Sec. 47-20.3. - Reductions and exemptions.	<p>A-3-d. Application Parking study which documents and supports the criteria submitted by the applicant for a parking reduction. The parking study shall be certified by a state licensed engineer, architect or landscape architect or American Institute of Certified Planners certified planner and shall document the existence of certain facts related to the projected use of the parking facility and its relationship to surrounding rights-of-way and properties. The methodology for conducting the study shall be submitted for review and approval by the city engineer and shall include, but not be limited to the week and day the study will be conducted, the number of days and duration of the study, and the time intervals and locations for data collection.</p> <p>A-5-d. Criteria (partial) If the application is based on two (2) or more different users sharing the same parking spaces at different hours, the peak hours for each use will be at different hours;</p> <p>A-5-e. 6. Sarasota (52,811)	Unofficial Zoning Code Section VII-211. Shared Parking Facilities		A. Two (2) or more non-residential uses located on the same or separate zoning lots may provide for shared parking facilities, upon receiving the approval of the Planning Board. The applicant shall demonstrate to the satisfaction of the Planning Board that the uses upon the zoning lot(s) are able to share the same parking spaces because their parking demands occur at different times (for example if one use operates during evenings or weekdays only). The Planning Board shall hold a public hearing at which the applicant shall be required to demonstrate to the satisfaction of the Planning Board that the type of use(s) indicates that the periods of usage will not overlap or be concurrent and that a reduction in the total number of required off-street parking spaces is			

		<p>justified. The applicant shall submit documentation supporting the request for shared parking spaces that shall, at a minimum, include:</p> <ol style="list-style-type: none"> 1. The uses proposed to share parking and the number of parking spaces required for those uses by this article; 2. The location and number of parking spaces that are being shared including a legal description of the property upon which the uses are located and upon which the shared parking spaces are located; 3. An analysis showing that peak parking times of uses occur at different times and that parking area(s) will have a sufficient number of parking spaces to meet the minimum anticipated demands of all uses sharing the joint parking area(s); and 4. If the shared parking spaces are located off-site then the applicant shall also demonstrate that a safe pedestrian route exists, or will be provided, for the safety of pedestrians traveling between the premises and the off-site parking facilities. 	
<p>7. St. Petersburg (246,541)</p>	<p>St. Petersburg, Florida, Code of Ordinances PART II - ST. PETERSBURG CITY CODE Chapter 16 - LAND DEVELOPMENT REGULATIONS SECTION 16.40.090. PARKING AND LOADING, DESIGN STANDARDS 16.40.090.3.2. Minimum number of parking spaces required.</p>	<p><i>C. Administrative adjustment of standards.</i> The purpose of this subsection is to provide flexibility in reducing or modifying parking standards for certain uses. An adjustment to a parking standard or requirement may be approved based on a determination by the POD that the adjustment is consistent with the purpose and intent of the parking standards and requirements. The POD's final determination may be appealed to the Development Review Commission.</p> <p><i>1. Joint use/shared parking.</i> Joint use of required nonresidential parking spaces may occur where two or more uses on the same or separate sites are able to share the same parking spaces because their parking demands occur at different times. Joint use of required nonresidential parking spaces is allowed when either of the following conditions applies:</p> <ol style="list-style-type: none"> a. Two or more owners or operators of buildings or uses requiring off-street parking may share a parking facility if the 	<p>Simplified analysis with parking occupancy percentages per time of day per user group.</p>

		total minimum number of required spaces conforms to the Matrix: Use Permissions and Parking Requirements when computed separately for each use or building type. b. Two or more owners or operators of buildings or uses requiring offstreet parking that share a parking facility may reduce the total amount of required parking spaces in accordance with the following methodology:					
Shared Parking Ratios (Numbers are listed as percent)						Weekday	Weekend
Use	Morning 12:00 am - 6:00 am	Day 9:00 am - 4:00 pm	Evening 6:00 pm - 12:00 pm	Day 9:00 am - 4:00 pm	Evening 6:00 pm - 12:00 pm		
Office	5.0	100	10	10	5.0		
Retail	5.0	60	90	100	70		
Restaurant	10	50	100	100	100		
Entertainment	10	40	100	80	100

<p>9. Orlando (249,562)</p>	<p>Orlando, Florida, Code of Ordinances TITLE II - CITY CODE Chapter 61 - ROADWAY DESIGN AND ACCESS MANAGEMENT PART 3. - PARKING AND LOADING 3C. NUMBER OF PARKING SPACES Sec. 61.323. Adjustments to Parking Requirements.</p>	<p>(3) a. Shared Parking. A reduction in the minimum number of required parking spaces may be approved for mixed-use developments where the uses have parking demands that peak at different times of the day, days of the week or seasons of the year, and if open and unreserved parking spaces are provided to share between the complementary uses. Shared parking shall be subject to the following standards:</p> <ol style="list-style-type: none"> 1. The study shall identify the properties and uses for the study. The study may include properties and uses not subject to the building permit. All land uses considered for shared parking analysis shall be within the Pedestrian Shed of those facilities providing parking for the analysis. 2. If parking is to be supplied by a party other than the applicant requesting the adjustment, where covenants are required, the applicant shall provide written confirmation, approved in form by the City, from all property owners involved, agreeing to the covenants, should the adjustment be approved. This requirement shall not apply in the MXD/T, MU/T, O/T and AC/T zoning districts. 3. The latest edition of <i>Shared Parking</i> published by the Urban Land Institute shall be used to estimate parking demand, except that the maximum parking ratios in Figure 27 of this chapter shall be used where the numbers differ from the maximums in <i>Shared Parking</i>. 4. Reductions for alternative transportation services shall be considered in the analysis. <p>b. A Parking Management Plan shall be submitted, outlining the provisions that parking is shared as assumed in the shared parking study, and that the shared parking arrangement provides for all required parking to be located within the Pedestrian Shed of the use served. The Parking Management Plan shall include the following:</p>	<p>Comprehensive analysis. ULI Shared Parking referenced.</p> <p>City utilizes range of parking demand ratios, minimum to maximum.</p>
--	---	--	--

		<p>1. A site plan showing parking spaces intended for shared parking and their proximity to the uses they will serve.</p> <p>2. Designation of parking facilities or portions thereof for each particular use or group of uses, if such distinctions are made. Directional signs to the assigned locations shall also be included in the plans.</p> <p>3. A pedestrian circulation plan that shows connections and walkways between vehicular use areas and land uses.</p> <p>4. A written plan to outline practices that will support successful shared parking including, but not limited to: access controls, parking rate schedules, and enforcement techniques.</p> <p>c. Where multiple parties own distinct portions of a single development proposing a reduction in parking due to shared parking, shared use agreements, approved in form by the City, must be formalized between the owners of the shared parking facilities and the properties served by the shared parking facilities.</p>

Where a mix of uses creates staggered peak periods of parking demand, shared parking calculations shall be made to reduce the total amount of required parking. Retail, office, institutional and entertainment uses may share parking areas. In no case shall shared parking include the parking required for residential uses.</p>	
		<p>(K) Parking Lots – Required Number of Off-Street Spaces for Type of Use, (3) Alternative Compliance:</p> <p>(a) Procedure. Alternative compliance parking ratio plans shall be prepared and submitted in accordance with the submittal requirements for plans as set forth in this Section. Each such plan shall clearly identify and discuss the modifications and alternatives proposed and the ways in which the plan will better accomplish the purpose of this Section than would a plan which complies with the standards of this Section. The request for alternative compliance must be accompanied by either a traffic impact study containing a trip generation analysis or by other relevant data describing the traffic impacts of any proposed recreational or institutional land use or activity.</p>	

Parking Demand Ratios

Parking demand ratios represent the number of required parking spaces for each land use, per defined unit. Several zoning ordinances and parking references have been researched to provide a comparison of parking demand ratios with those currently defined in the City of Coral Gables Zoning Code/Development Standards. The table below summarizes the parking demand ratios from five (5) local municipalities and from *ULI Shared Parking*, in comparison to those of Coral Gables.

Parking Demand Ratio Comparison Summary

Municipality	Parking Demand Ratio							
	Retail (spa. / SF)	Cinema (spa. / unit)	Restaurant (spa. / SF)	Daycare (spa. / SF)	Hotel (spa. / room)	Office (spa. / SF)	Gym (spa. / SF)	Residential (spa. / unit)
Coral Gables (Zoning Code Art.5 Development Standards / Div 14 / Section 5-1409.B)	1 / 250 = 4 / 1000	1 / 300 = 3.33 / 1000 (Indoor Rec.)	12 / 1000	1 / 100 = 10 / 1000	1.125 / room	1 / 300 = 3.33 / 1000	1 / 300 = 3.33 / 1000 (Indoor Rec.)	1.75 / unit (1BR, 2BR) 2.25 / unit (3BR)
Miami (Miami 21 – Article 4 Table 4 / T5 Zone)	3 / 1000 (comm- ercial use)	3 / 1000 (comm- ercial use)	3 / 1000 (comm- ercial use)	3 / 1000 (comm- ercial use)	1 / 2 rooms = 0.5 / room + 0.1 / unit = (visitors) 0.6 /unit	3 / 1000	3 / 1000 (comm- ercial use)	1.5 / unit + 0.1 / unit = (visitors) 1.6 /unit
Miami Dade County (Zoning Article VII / Section 33-124)	1 / 250 = 4 / 1000	1 / 1000	1 / 50 = 20 / 1000 (Table svc) 1 / 250 = 4 / 1000 (Take out)	N/A	1 / 40 rooms + 1 / 2 rooms = 0.525 / room	1 / 300 = 3.33 / 1000	1 / 100 = 10 / 1000	1.5 / unit (1BR) 1.75 / unit (2BR) 2 / unit (3BR)
Miami Beach (Land Development Regulations / Ch. 130 / Dist. 2 - 6)	1 / 300 = 3.33 / 1000	1 / 4 seats	1 / 4 seats + 1 / 60 SF (not seating)	N/A	1 / room	1 / 400 = 2.5 /1000	1 / 4 seats or 1 / 60 SF	1.5 / unit (1ksf) 1.75 / unit (1ksf - 1.2ksf) 2.0 / unit (> 1.2ksf)
Ft. Lauderdale (Unified Land Development Code / Section 47 -20 / Varies)	1 / 250 = 4 / 1000	1 / 3 seats	1 / 30 + 1 / 250	1 / 325 = 3.08 / 1000	1 / room	1 / 250 = 4 / 1000	1 / 200 = 5 / 1000	1.75 / unit (1BR) 2.0 / unit (2BR) 2.1 / unit (3BR)
Broward County (Zoning Ch 39 / Article XII / Section 215)	1 / 200 (< 40 ksf) 1 / 250 (40-200 ksf) 1 / 300 (>200 ksf)	1 / 4 seats	1 / 100 = 10 / 1000	1 / 400 = 2.5 / 1000	3 / 4 rooms = 0.75 / room	1 / 200 = 5 / 1000	1 / 150 = 6.67 / 1000	1.5 / unit (1BR) 2 / unit (2BR) 2.25 / unit (3BR)
ULI Shared Parking (2 nd edition / Table 2-2 / combined weekday visitor and employee)	3.6 / 1000	0.20 / seat	18 / 1000 (Fine/Cas.) 10.5 / 1000 (Family)	N/A	1.25 / room (Business) 1.15 / room (Leisure)	3.8 / 1000 (< 25 ksf) 3.35 / 1000 (100 ksf) 2.8 / 1000 (500 ksf)	7 / 1000	1.65 / unit (Rental) 1.85 / unit (Owned)

PROJECT RESEARCH

Several various existing mixed-use projects have been researched to provide a comparison to the Mediterranean Village project with respect to user characteristics, size, and parking spaces. Three (3) mixed-use projects were identified for similarities to the Old Spanish Village project and are listed below. It should be noted that limited public information for these existing sites was obtained from each location's website and key information is presented.

- CityPlace, West Palm Beach
- Mizner Park, Boca Raton
- Village of Merrick Park, Coral Gables

	CityPlace	Mizner Park	Village of Merrick Park
Year Opened	2000	1991	2002
Retail	Yes	236,000 SF	731,000 SF GLA
Hotel	-	-	-
Apartments	Yes	-	-
Office	280,300 (two towers)	267,000 SF	-
Cinema	Yes	5,000 seats	-
Parking	3,450 spaces	2,500 spaces	3,800 spaces

Reference Appendix A Project Research Fact Sheets for additional information.

One project currently under construction in downtown Miami, Brickell CityCentre, was identified as a significantly comparable project. This project is located in the Brickell financial district area of downtown Miami encompassing multiple city blocks and two levels of underground, interconnected parking.

Per the project website (www.brickellcitycentreconnect.com), project information includes:

Project Highlights

- 9.1 acres along South Miami Avenue between 8th Street and 6th Street
- 5.4 million square feet of office, residential, hotel, retail, and entertainment space, in addition to a two-level underground parking garage that spans seven acres below the property
- An environmentally progressive architectural feature that will provide innovative climate control so shoppers can walk in comfort between stores and restaurants
- Incorporates key transportation centers with the Miami Metromover while offering easy access to Interstate 95.

Project Statistics

- 625,000 square-foot shopping center
- 128,580 square feet of Class A offices
- 131,651 square-foot wellness center
- 820 condominiums in two towers
- 263 hotel rooms
- 89 serviced apartments
- 2,600 parking spaces

A comparison of Brickell City Centre and Mediterranean Village is provided below.

	Brickell CityCentre (BCC)		Mediterranean Village		
	Use	Value	Use	Value	Comparison to BCC
Commercial					
	Shopping Center (SF)	625,000	Retail (SF)	242,000	
			Cinema (SF)	32,000	
			Restaurant (SF)	29,000	
			Daycare (SF)	12,000	
		625,000		315,000	50.40%
Office					
	Class A Office (SF)	128,580	Office (SF)	314,000	244.21%
Gym					
	Wellness Center (SF)	131,651	Gym (SF)	9,500	7.22%
Residential					
	Condominiums (units)	820	Townhouse	15	
	Apartments (units)	89	2 BR	128	
			3 BR	86	
		909		229	25.19%
Hotel					
	Hotel (rooms)	263	Hotel (rooms)	184	69.96%
Parking					
	Required Parking (spaces) *	3,477	Required Parking (spaces)	3,284	94.45%
	<i>*Per Arquitectonica Contract Documents dated 3/8/13</i>		<i>Per City of Coral Gables Zoning Code (without transit modal reduction)</i>		
	Provided Parking (spaces)	2,600			
	Parking Reduction	25.22%			

PARKING REDUCTION

Methodology

Appendix B Parking Reduction Calculations contains the shared parking analysis spreadsheet separated into eight sections and are listed below with supporting narrative of parking reduction methodology and assumptions.

1. Land Use Inputs

Proposed land uses are categorized into Commercial/Hotel and Residential. Commercial/Hotel category also includes uses of retail, cinema, restaurant, daycare, office, and gym. Residential category contains townhouses, 2BR units, and 3BR units. Notes are included for square footage sizes (GLA and GFA) along with cinema square footage accounting for 3 screens and 290 seats.

2. Parking Ratio

For the proposed land uses, the parking ratios utilized were obtained from the City of Coral Gables Zoning Code Section 5-1409. The corresponding city use is listed for each proposed land use.

The restaurant uses have been separated into “family” and “fine/casual dining” type as defined by *ULI Shared Parking*. Family type restaurants are defined as typically lower priced, do not accept reservations, and lack bars or lounges. Family type is defined by ITE as High Turnover without Bar. Fine dining type restaurants include more leisurely dining, reservations, and lower turnover. Fine dining type is defined by ITE as Quality restaurant (931). Casual dining type restaurants are moderately priced, often chains, and generally do not accept reservations. Casual dining type is defined by ITE as High Turnover with Bar (932).

The type of hotel assumed is “business type” as defined by *ULI Shared Parking* and ITE to have limited restaurant or meeting facilities compared with full service hotels.

Understanding *ULI Shared Parking* contains separate parking demand ratios for employees/residents and visitors, the City of Coral Gables base parking demand ratios have been separated into employee and visitor ratios based on ULI relationships of employees/residents and visitors.

3. Trip Reductions

The mode split utilized in the shared parking analysis has been updated to provide separate mode splits for employees/residents and visitors. ULI Shared Parking Table 3-1 Examples of Journey-to-Work Data lists examples of transportation modes information provided by the 2000 U.S. Census Bureau. The mode split for employees/residents utilized is based upon 2012 American Community Survey Miami-Dade Profile dated September 2013 which provides Commuting to Work values from 2010 – 2012. This study has considered the modes of public transportation, walked, and other means to determine the percentage of employees not utilizing a vehicle and therefore not requiring a parking space. Other means category has been included to account for transportation modes such as bicycling and drop-off/pick-up.

The associated total mode split was 9.3% in 2010, 9.4% in 2011, and 10.1% in 2012 resulting in an average of 9.6%. The updated shared parking analysis has been updated for a 9.6% mode split employees/residents and 4.8% visitor mode split (1/2 of employee/resident). Reference Appendix C 2012 American Community Survey Miami-Dade Profile dated September 2013.

4. Parking Calculations

The required parking for each land use, separated into employee/resident and visitor, is calculated based on City of Coral Gables parking demand ratios for employee/resident and visitor to determine the single use parking demand. Daycare is an accessory use to the project, and therefore, only employee generated parking demand is considered. The appropriate mode split is applied to the single use parking demand to determine the trip reduction demand, with the exception of residential townhouses where no trip reduction is applied.

5. Internal Capture

Internal capture is not considered in this parking reduction analysis.

6. Time of Day Trends

Weekday time-of-day factors for employees/residents and visitors were obtained from *ULI Shared Parking* Table 2-5 Recommended Time-of-Day Factors for Weekdays between the hours of 6:00 am and 12:00 am, excluding the daycare land use. Daycare time-of-day factors input are assumptions based upon peak times noted in ITE Parking Generation (Land Use: 565 Day Care Center). Note, only employee generated demand for daycare is considered. Retail utilizes the ULI land use of "Shopping Center – Typical", Restaurant utilizes the ULI land use of "Family Restaurant" and "Fine/Casual Restaurant", and Hotel utilizes the ULI land use of "Hotel – Business". Townhouse residents utilize the ULI land use of "Residential Reserved", and 2BR and 3BR residents utilize the ULI land use of "Residential – Resident".

7. Shared Parking Calculations

Shared parking values are calculated for each land use, separated into employee/resident and visitor categories. The shared parking values are calculated by multiplying the appropriate land use input, City of Coral Gables parking ratio (employee/resident or visitor), and the appropriate time-of-day factor. The employee/resident and visitor shared parking values are added together to determine the peak shared parking demand of 2,869 spaces on a weekday at 2:00 pm. Note, the calculations in this section does not account for trip reduction.

8. Peak Parking Demand

Similar to Section 4, the shared required parking for each land use, separated into employee/resident and visitor, is calculated based on City of Coral Gables parking demand ratios for employee/resident and visitor to determine the single use shared parking demand of 2,869 spaces. The appropriate mode split is applied to the single use shared parking demand to determine the trip-reduced, shared parking demand of 2,653 spaces. Note, trip reduction was not applied to the residential townhouses.

Summary tables of employee/resident, visitor, and total parking spaces for shared parking values and shared parking with trip reduction values are compared with the City of Coral Gables single use parking demand of 3,182 spaces.

Proposed Parking Demand

The proposed parking demand for Mediterranean Village utilizes the current uses per the Owner and Architect's latest program and the City of Coral Gables Zoning Code parking demand ratios. Parking adjustments include multi-modal trips (based upon traffic impact analysis), and time of day trends for visitors, employees, and residents for each use (based upon ULI *Shared Parking*).

Below is a summary of the proposed parking demand in comparison to that required by the City of Coral Gables Zoning Code.

PARKING DEMAND		
City of Coral Gables Zoning Code Single Use Base Demand	+ Shared Parking	+ Modal Split
3,182 spaces		
	2,869 spaces (10% reduction)	
		2,653 spaces (17% total reduction)

Appendix B Parking Reduction Calculations contain the shared parking analysis values with a peak parking value identified on a weekday at 2 P.M.

Appendix A

Project Research Fact Sheets

Florida Huddle “Must See” Spots at CityPlace

One of the most inspired and admired downtown centers in the nation, CityPlace’s imaginative architecture, public plazas and destination restaurants and shopping have made it a signature of Downtown West Palm Beach. The open-air, Italian-inspired, 72-acre property offers more than 80 shopping, dining and entertainment options for people of all ages and tastes. Stop by Guest Services, show your hotel key or out of town ID to receive a complimentary gift.

SHOP: Shoppers of every stripe, from casual strollers to dedicated fashionistas, will find something they must have at CityPlace, which features some of the most popular stores in the nation, mixed with local and regional specialty shops. New retailers include **H&M** and fashion accessory boutique **Charming Charlie**. Popular lifestyle brand **Tommy Bahama** recently remodeled its store to evoke a modern beach house and stay true to the brand’s bright, airy, and relaxed feel. Features include clean white walls, limestone counter tops and dark hardwood floors. Apparel brands on the property include **Macy’s; Anthropologie; Francesca’s Collections; Lucky Brand Jeans; Victoria’s Secret; Banana Republic; Nine West; BCBG MaxAzria; Gap; Apricot Lane; Gymboree; Cache; Armani Exchange** and more. For cosmetic needs, CityPlace offers **Sephora, Bath & Body Works** and nationally renowned **Anushka Spa, Salon & Cosmedical Centre**.

DINE: If you work up an appetite while shopping, CityPlace’s restaurant and bar collection is unparalleled in South Florida. Recent additions include the wildly popular **Brio Tuscan Grille**, the Brazilian churrascaria **Pampas Grille**, and **Mojito Latin Cuisine & Bar**. Be ready to fall in love with the newly remodeled **Il Bellagio**, which reopened this season after an extensive renovation to its piazza-inspired setting. The restaurant is known for its authentic Italian cuisine and fountain-side plaza location, where guests can enjoy the water show set to music every half-hour.

For sweet treats, CityPlace offers the Italian market and gelato shop, **ITALY**; cupcake boutique, **Sugar Chef**; the whimsical ice cream and candy shop, **Sloan’s**; perfect pretzels from **Auntie Anne’s**; **Tutti Frutti Frozen Yogurt**; and **Rita’s Italian Ice**.

New on the menu are **Moes Southwest Grill, Copper Blues Rock Pub & Kitchen, 100 Montaditos**, and **Burger Fi**. Other top dining options include **Mellow Mushroom Pizza Bakers; Cheesecake Factory; Thai Jo by Sushi Jo**; and more.

DRINK: Conquer the night like a cowboy at **Tequila Cowboy Bar & Grill** in CityPlace. Guests looking for some true southern hospitality will appreciate this new hot spot’s blend of music, food and fun straight from Nashville, Tennessee. Featured on ABC’s hit television series, “Nashville,” the entertainment venue features national country acts and local musicians, a spacious dance floor and mechanical “bull riding.” **WannaB’s Karaoke Bar** is right next door, giving patrons two entertainment venues under one rocking roof. Guests can brave the center stage and become rock stars for the evening with the D.J. offering more than 300,000 songs to choose from. There’s a full service bar and a high quality sound system that helps even the most off-key “star.” Other hot spots include **Blue Martini, City Cellar Wine Bar & Grill, Brewzzi** and more.

FUN: CityPlace is more than a shopping or dining destination – it’s an experience. The latest addition to the entertainment lineup is **Revolutions Bowling, Bar & Grille**, the ultimate upscale bowling experience geared to both family and nightlife fun. Beyond bowling, the destination located at the north end of the property features delicious dishes from its Red Brick Grille, a sports viewing center, an arcade, billiards and more.

Visitors love the free live music and entertainment in front of the fountain on the CityPlace plaza on weekends and monthly Family Fun Fests all year round, plus art fairs, marquee cultural events, charity walks, and top national music acts. CityPlace has hosted free, live concerts from musicians such as Vanessa Carlton, Julianne Hough, Scotty McCreery, Gloriana, Craig Morgan, Plain White T's, Colbie Caillat and many more.

TROLLEY: CityPlace, in a partnership with the West Palm Beach Downtown Development Authority, also operates a free trolley service that links the center with the Clematis District and has more than 50,000 people riding the trolleys each month. This service has, in itself, become a popular tourist attraction, and runs from 11 A.M. to 9 P.M. Sunday through Wednesday, and 11 A.M. to 11 P.M. Thursday through Saturday.

HARRIET HIMMEL THEATER: CityPlace's centerpiece – The Harriet Himmel Theater for the Performing Arts – is a restored 1920s church, which now hosts a variety of cultural performances, weddings, corporate events, community functions, art exhibits, educational forums and more.

FOUNTAIN: The \$3.5 million, eco-friendly "show" fountain on the plaza dazzles guests with a choreographed performance to music every half-hour and serves as CityPlace's centerpiece. The fully automated water feature is also illuminated in an array of colors.

LOCATION: Strategically positioned just east of the intersection of Interstate 95 (exit 70), the major north-south artery in South Florida, and Okeechobee Boulevard, the gateway to the Palm Beaches. Located across from the Palm Beach County Convention Center and the renowned Kravis Center for the Performing Arts in Downtown West Palm Beach. For visitors using Florida's Turnpike, CityPlace is a few miles east of exit 99 at Okeechobee Boulevard.

PARKING: Covered parking for 3,300 vehicles in four garages, plus a 150-space parking lot on the northern end of the property across, all of which include 24-hour security. Valet parking is available in several locations and private on-site parking is provided for CityPlace residents.

CITYPLACE

MIZNER PARK

BOCA RATON, FLORIDA

THE MERCHANDISING

- Boca Raton's Mizner Park is a pioneering downtown mixed-use project that includes 236,000 square feet of retail space, 267,000 square feet of office space, luxury retail apartments, town homes and cultural arts space, as well as a 5,000-person-capacity amphitheater. Mizner Park offers a signature business address for professionals. Choose from the seven-story Office Tower or the Plaza Real offices overlooking the vibrant setting of Mizner Park. Named one of America's Top Public Places in 2010 by the American Planning Association, Mizner Park offers visitors a remarkable experience of culture, shopping, dining and entertainment in an open-air environment.
- Mizner Park's design is inspired by a setting reminiscent of a charming European city. The project is configured as two city blocks of luxury retail, restaurants, offices and apartments surrounding a beautifully landscaped park with gazebos, fountains and lush tropical gardens. Center for the Arts at Mizner Park adds a unique dimension to the property, with the Count de Hoernle Amphitheater featuring a diverse lineup of concerts and entertainment and the Boca Raton Museum of Art showcasing works of art in a variety of media of national and international importance. For movie buffs, the iPic Theaters features dining at Tanzy's and first-run movies under one roof!
- The retail component is the heartbeat of Mizner Park, offering discriminating clientele a high level of luxury choices. World-renowned luxury jewelers include F.P. Journe, Jaeger-LeCoultre, Hublot Geneve, Martier, Van Cleef & Arpels and fashion anchor Lord & Taylor. One-of-a-kind boutiques can be found alongside nationally known retailers such as Tommy Bahama, Janie & Jack, Mephisto, Sur La Table and Z Gallerie.
- Top categories include restaurants, jewelry and women's apparel.
- Dine in or al fresco at an amazing collection of restaurants for every taste. Savor the offerings of Truluck's Seafood, Steak and Crab House, Max's Grille and Ruth's Chris Steakhouse. For a casual experience, enjoy the Dubliner Irish Pub, Villagio, Uncle Julio's Fine Mexican Food or Yard House. Nightlife includes Jazziz, the new hot spot in town with headlining performers offering live entertainment and fine dining nightly.

THE LOCATION

- Mizner Park is an established landmark situated among luxurious residences located less than one mile from the oceanfront condominiums.
- The prestigious Boca Raton Resort & Club, with over 1,000 rooms, is nearby and caters to the corporate and celebrity client. The private Royal Palm Yacht & Country Club caters to the elite residents.
- I-95 is less than two miles west, enhancing the project's ability to maximize its draw of both residents and visitors to the area.

THE TRADE AREA

- Approximately 80% of the commercial activity at Mizner Park is generated by full-time and seasonal residents of Palm Beach and Broward Counties. The remainder is generated by visitors from outside the southeast Florida area.

THE FUTURE

- Mizner Park will continue to be one of South Florida's most coveted addresses for living, working, shopping and dining. As the jewel of downtown Boca Raton, its foundation for sustained sales growth is well established.

THE NEW TENANTS

Bang & Olufsen, ECJ Lux Collection and La Macaron

VILLAGE OF MERRICK PARK

CORAL GABLES, FLORIDA

THE MERCHANDISING

- World renowned luxury retailers, including Gucci, Burberry, CH Carolina Herrera, Diane von Furstenberg, Jimmy Choo and Tiffany & Co. complement the fashion anchors.
- Neiman Marcus and Nordstrom maintain flagship stores. These stores are both the largest for their respective chains in Florida.
- Popular brands such as J.Crew, Athleta, Banana Republic, Ann Taylor, Anthropologie, White House | Black Market and Pottery Barn help round out the merchant mix.
- A variety of dining options include Yard House, Villagio, SAWA Restaurant and Lounge, CRAVE, Mariposa at Neiman Marcus and Nordstrom Café Bistro.
- Featuring fine shopping, dining, offices and residences, Village of Merrick Park caters to a clientele that appreciates style and substance and can afford the best. It is a magnet for both residents and visitors.
- Top categories include family and women's apparel, jewelry and home furnishings.

THE LOCATION

- Village of Merrick Park is located in the heart of Coral Gables. This South Florida city is one of the nation's most affluent communities, with a greater percentage of young millionaire households under the age of 45 than any other community in the U.S.
- A strong zoning code protects the city's elegance, earning Coral Gables the moniker, "City Beautiful."
- Coral Gables is a major commercial hub, with 10.8 million square feet of office space and more than 1,600 hotel rooms.

THE TRADE AREA

- Sustained growth in international commerce has transformed Miami into a cosmopolitan urban center that attracts 7.1 million international visitors annually. This international market is led by Brazil, Canada, Argentina, Colombia and Venezuela with a total increase of international visitors up 4.4% in 2013.
- Village of Merrick Park's trade area is home to 969,950 residents in 355,681 households.
- Luxury residences on Brickell Avenue and Key Biscayne as well as in Coconut Grove provide seasonal housing for Latin American business leaders who spend lavishly on luxury retail goods.
- Affluent South Miami residents are younger than their North Miami counterparts, have growing families, live in magnificent homes and maintain strong ties to the community's cultural and philanthropic organizations.

THE FUTURE

- Always on the brink of fashion, this retail venue will soon welcome new additions to its fashion-forward repertoire, including kate spade new york and Boston Proper.

Miami-Dade County American Community Survey Key Indicators 2010-2012

This update of the annual American Community Survey, that was released on September 19th, covers the period 2010 through 2012. This was a period of recovery for the economy and housing market in Miami-Dade County. As such one would expect noteworthy changes in some of these characteristics. The following summarizes basic economic, housing, social and demographic factors, with particular focus on variables that displayed significant change.

Economic

Employment

Improving employment numbers during 2010-2012 reflect an economy that is still recovering from the recent economic downturn.

- The civilian labor force grew to over 1.32 million in 2012, a 6.7% increase from 2010.
- The number of employed persons increased by 8.3%, while unemployed persons fell by 3.7%.
- The unemployment rate dropped from 13.1% to 11.9%.

Income

Inflation-adjusted median income has declined, however the portion of households with income below \$25,000 has decreased, while those above \$100,000 increased.

- Median household income dropped from \$42,347 to \$41,400, a 2.2% decrease.
- The number of households with income below \$25,000 increased by 0.7%, however the portion of total households in this lowest income group fell to 31.7%.
- The number of households with income above \$100,000 increased by 9.6%; with all income categories between \$75,000 and \$200,000+ making up a larger portion of the total household income distribution.

Poverty

Increasing poverty has presented a continuing challenge during the last three years, as both the percentages of impoverished individuals and families increased.

- Poverty among individuals grew from 20.4% in 2010 to 20.8% in 2012.
- The percentage of poor families increased to 17.5% from 16.4% in 2010, with families with a female householder and no husband present suffering an especially large increase from 28.1% to 32.9%.
- Among families with children under 18 years old, the percentage in poverty increased from 21.7% to 24.9%; however the percentage of poor families with only children under 5 years old fell from 20.6% to 20.3%.

Health Insurance

Health insurance coverage has become more widespread among the civilian population during the 2010-2012 period.

- Public health insurance coverage increased by 13.4%, expanding from 707,784 to 802,739 individuals.
- The number of individuals lacking health insurance decreased from 782,053 to 745,846, representing a 4.6% decline.
- Health insurance coverage for employed persons grew from 61.4% in 2010 to 63.4% in 2012.

Housing

Comparing 2010 to 2012, vacancy rates have decreased, renters occupy more units relative to owner-occupied units than before, and mortgage and rental costs have moved in opposite directions.

- Homeowner and rental vacancy rates fell to 2.0% and 7.5%, respectively, down from 4.6% and 9.7% in 2010.
- While 57.0% of housing units were owner-occupied in 2010, this figure dropped to 54.3% in 2012.
- The number of homeowners with monthly mortgage costs below \$1,000 increased by 3.1%, now representing 13.8% of mortgages; conversely, those with monthly mortgage costs above \$1,000 decreased by 5.9%, corresponding to 86.2% of total mortgages. Cost burdened homeowners, those with mortgage costs surpassing 30% of owner income, totaled 53.8% of all mortgages, down from 59.3% in 2010.
- The number of renters paying less than \$750 monthly decreased, while monthly rental payments above \$750 increased. 79.5% of rental units had gross rent greater than \$750, up from 75.3% in 2010. However, the percentage of tenants paying monthly rent greater than 30% of income, the measure of cost burdened renters, has enjoyed relative stability, changing slightly from 65.3% of rental units to 65.1%.

Social

The number of households has increased during the three-year time period, including more new Miami-Dade residents moving across state lines or national borders than in 2010; a notable change in educational attainment has accompanied this population increase.

- The number of households rose by 3.6% to 838,772 from 809,689 in 2010.
- With 31,916 new Miami-Dade residents coming from another U.S. state, the county witnessed a 24.8% increase in this category; 2.3% more new residents came from abroad than in 2010, totaling 38,655.
- The foreign-born population increased by 1.5%, 53.0% of the more than 1.32 million foreign-born residents being naturalized U.S. citizens.
- The number of individuals 25 years and older having attained less than a high school diploma decreased by 10.8%, while the percentage holding at least a bachelor's degree increased to 27.3% from 25.2%.

Demographic

Among the changes in overall county population, several notable trends can be highlighted in terms of race and ethnicity.

- The number of individuals self-identifying as Hispanic or Latino increased by 2.0% to more than 1.66 million, making up 64.3% of the county population.
- Whites (non-Hispanic) and Blacks (non-Hispanic) increased in numbers by 9.1% and 2.7%, respectively.
- Large fluctuations occurred in the populations corresponding to residents of Mexican and Puerto Rican ethnicity, the former increasing 15.5% and the latter decreasing 9.3%.

Subject: *Mediterranean Village Parking Operations Narrative*

Introduction

In response to Shared Parking Comments by Charles Wu dated 1/20/15, this memorandum provides an update to the operations narrative to account for valet parked residential visitors on basement level 2.

The Mediterranean Village is a high design mixed use development project in the heart of the Coral Gables community. The major uses of this project are; retail, restaurant, cinema, gym, daycare, hotel, residential and office. The required amount of parking was determined through a shared parking analysis.

Parking Operations

The parking garage for the Mediterranean Village project has multiple points of vehicular entry and exit which are located on Sevilla Avenue, Palermo Avenue, Malaga Avenue, and Ponce De Leon Boulevard. Once inside the parking garage, drivers will have access to all parking levels throughout the site without having to exit onto the public streets.

The commercial uses (retail, restaurant, cinema, gym, daycare), hotel, and office uses, will park on portions of basement level 2, basement level 1, levels 3, 4, 5, and portions of level 6. Each level will have self-park areas and will allow the patrons of Mediterranean Village to easily access the parking for the project. Reserved residential parking will be located on level 7 and a portion of level 6.

For the patrons who prefer to valet park, multiple valet stations will be located around the site. The three valet stations (North along Sevilla Avenue, Central along Palermo Avenue, and Hotel along Ponce De Leon Boulevard) are identified within the Valet Operating Plan, provide under separate cover. Valet attendants will park vehicles in a dedicated area located on basement level 2. The valet from the hotel is seamlessly integrated into the fabric of the project with ramps directly accessing ingress and egress from the parking garage, without having to circulate onto Ponce De Leon Boulevard.

Table 1 below provides a summary of the parking operations for each level.

Table 1. Parking Operations Summary

Level	Use	Location	Self-Park / Valet	Reserved
B2	Commercial / Office / Hotel / Residential Visitors	Partial level	Self-Park and Valet	No
B1	Commercial / Office / Hotel	Entire level	Self-Park	No
1	N/A (Vehicular Circulation)			
2	N/A (Vehicular Circulation)			
3	Commercial / Office / Hotel	Entire level	Self-Park	No
4	Commercial / Office / Hotel	Entire level	Self-Park	No
5	Commercial / Office / Hotel	Entire level	Self-Park	No
6	Commercial / Office / Hotel	Partial level	Self-Park	No
	Residential	Partial level	Self-Park	Yes
7	Residential	Entire level	Self-Park	Yes

Table Notes:

1. Use column includes both employees/residents and visitors associated with each use, unless noted otherwise.
2. Commercial category includes retail, restaurant, cinema, gym, daycare uses.

**Subject: Mediterranean Village
Valet Operations Analysis**

Kimley-Horn and Associates, Inc. has prepared a valet operations analysis for the proposed Mediterranean Village redevelopment. This analysis has been updated from the 1/27/2015 analysis incorporating the consolidation of the central residential and retail valet drop-off stands. The existing site contains vacant land and buildings that will be demolished. The proposed redevelopment will consist of a mixed use development with the following land uses:

- 242,000 square feet of retail space
- 314,000 square feet of office space
- 15 residential townhouses
- 214 high-rise residential condominiums
- 184-room hotel
- 21,750 square feet of quality restaurant
- 7,250 square feet of high-turnover (sit-down) restaurant
- 9,500 square-foot gym/fitness club
- 12,000 square-foot day care center
- 8-screen movie theater

The site proposed for redevelopment is bounded by Sevilla Avenue to the north, Malaga Avenue to the south, Galiano Street to the east, and Ponce De Leon Boulevard to the west. A location map is provided as Figure 1 in Attachment A. The following sections summarize the analysis.

VALET SERVICE AND OPERATIONS

The Mediterranean Village redevelopment will be served by four (4) valet drop-off/pick-up areas that include:

- The North valet drop-off/pick-up is located within on-street parking (a vehicle queue capacity of seven [7] vehicles is required) on the south side of Sevilla Avenue adjacent to the north residential tower lobby and paseo. This valet will serve both residential guests of the north tower and a portion of the retail/restaurant/theater patrons.
- Central valet drop-off stands will be provided along the south side of the Palermo Avenue. The valet drop-off stand will serve general retail/restaurant/theater patrons, and residential guests of the adjacent tower. A total of five (5) on-street parking spaces are required for the valet drop-off stand.

- A Central valet pick-up stand will be provided along the north side of Palermo Avenue serving both the residential guests of the adjacent tower and general retail/restaurant/theatre patrons. A total of five (5) on-street parking spaces are required for this valet pick-up stand.
- A hotel/south residential tower valet stand will be provided for hotel guests and guest of the south residential tower within the porte-cochere located directly off the northbound lanes of Ponce De Leon Boulevard north of Malaga Avenue. Note that all valet operations will occur within the porte-cochere area and will not require circulation on to Ponce De Leon Boulevard. The porte-cochere has a required vehicle queuing capacity of seven (7) spaces.

Self-parking will be provided at the site. Therefore, the following valet service assumptions were utilized to determine the required amount of vehicle queue storage and valet attendants:

- Twenty five percent (25%) of the retail traffic is expected to utilize the valet. Based on the trip distribution from the traffic study contained as Figure 2 in Attachment A, retail traffic is expected to utilize the north and central valet areas.
- Twenty five percent (25%) of the movie theater traffic is expected to utilize the valet. Based on the trip distribution from the traffic study contained as Figure 2 in Attachment A, movie theater traffic is expected to utilize the north and central valet areas.
- High-rise residential guests or eight decimal point four percent (8.4%) of the high-rise residential condominium traffic are expected to utilize the valet. As these units are contained on the north, central, and south parcels, traffic from this land use is expected to utilize the north, central, and hotel/south valet areas.
- One hundred percent (100%) of the hotel trips are expected to utilize the valet. As a dedicated hotel porte-cochere is provided, traffic from this land use is expected to utilize the hotel valet area.
- Seventy five percent (75%) of the quality restaurant trips are expected to utilize the valet. Based on the trip distribution from the traffic study contained as Figure 2 in Attachment A, quality restaurant traffic is expected to utilize the north and central valet areas.
- Twenty five (25%) of the high-turnover (sit-down) restaurant trips are expected to utilize the valet. Based on the trip distribution from the traffic study contained as Figure 2 in Attachment A, quality restaurant traffic is expected to utilize the north and central valet areas.

Figure 3 contained in Attachment A depicts the valet vehicle circulation routes.

TRIP GENERATION

Typical Demand Condition (Weekday P.M. Peak Hour)

Trip generation for the proposed redevelopment for the typical demand condition (weekday P.M. peak hour) was calculated using rates and equations contained in the Institute of Transportation Engineers' (ITE) *Trip Generation*, 9th Edition. Trip generation was determined using ITE Land Use Codes (LUC) 820 (Shopping Center), 710 (General Office Building), 230 (Residential Condominium/Townhouse), 232 (High-Rise Residential Condominium/Townhouse), 310 (Hotel), 931 (Quality Restaurant), 932 (High-Turnover [Sit-Down] Restaurant), 492 (Health/Fitness Club), 565 (Day Care Center), and 445 (Multiplex Movie Theater). Consistent with the traffic study, an internal capture of 13.2 percent (13.2%), and a 6.0 percent (6.0%) multimodal reduction were applied. Table 1 summarizes the valet trips at each valet location. Detailed valet trip calculations are contained in Attachment B.

Table 1: Weekday P.M. Peak Hour Trip Generation Summary			
Valet Location	In	Out	Total
North Valet	63	56	119
Central Valet	141	118	259
Hotel/South Valet	37	36	73

Highest Demand Condition

Trip generation for the highest demand condition was calculated based on a comparison of the weekday P.M. peak hour and weekday P.M. peak hour of generator rates for the land uses expected to utilize the valet including the shopping center, movie theater, high-rise residential condominium, and hotel. The comparison yielded a 1.30 factor that was applied to develop the highest demand condition trip generation. Table 2 summarizes the valet trips at each valet location. Detailed valet trip calculations are contained in Attachment B.

Table 2: Highest Demand Peak Hour Trip Generation Summary			
Valet Location	In	Out	Total
North Valet	83	70	153
Central Valet	182	157	339
Hotel/South Valet	48	47	95

VALET OPERATIONS ANALYSIS

The valet queuing operations analysis was performed based on the methodology outlined in the ITE's *Transportation and Land Development*, 1988. The analysis was performed to determine if valet operations could accommodate vehicular queues without blocking travel lanes on public right-of-way. Two (2) analyses were developed, (1) for the highest demand condition and (2) for the typical demand condition.

North Valet Operations Analysis

Assumptions

The queuing analysis used the multiple-channel waiting line model with Poisson arrivals and exponential service times. The queuing analysis is based on the coefficient of utilization, ρ , which is the ratio of the average vehicle arrival rate over the average service rate multiplied by the number of channels.

The average service rate corresponds to the time it would take a valet attendant to obtain a vehicle from an arriving patron, park the vehicle, and return to the valet area. The calculated average service time was 8.9 minutes. Detailed trip length calculations are included in Attachment C.

The average service rate for departing patrons corresponds to the time it would take the valet attendant to walk to the parked vehicle, return with the vehicle to the valet area, and for the patron to exit the valet

area. The calculated average service time was 9.8 minutes. Detailed trip length calculations are included in Attachment C.

If the coefficient of utilization (average service rate/valet attendant service capacity) is greater than one (> 1), the calculation methodology does not yield a finite queue length. This result indicates overcapacity conditions for the valet area. The valet attendant service capacity is the number of total trips a valet attendant can make in a one-hour period multiplied by the number of valet attendants.

The analysis determined the required queue storage, M, which is exceeded P percent of the time. Since this analysis seeks to ensure that the queue length does not exceed the storage provided, at a level of confidence of 95 percent. Seven (7) vehicle drop-off/pick-up spaces are required.

Analysis

An iterative approach was used to determine the number of valet attendants required to accommodate traffic demand during the analysis hour and ensure that the 95th percentile valet queue does not extend beyond the designated valet service area. The valet analysis worksheet is provided in Attachment D.

Results of the valet operations analysis demonstrate that a total of 23 valet attendants are required under average demand conditions with 29 valet attendants being needed during the highest demand condition without blocking travel lanes on Sevilla Avenue.

Conclusion

Based on the valet operations analysis performed, it was determined that the 95th percentile valet queues will not extend beyond the valet service area blocking travel lanes on Sevilla Avenue. Based upon the conservative assumptions regarding the traffic demand, it was estimated that between 23 and 29 valet attendants may be required during typical and high demand peak hours. It should be noted that projected vehicular volumes and estimated valet processing times were conservatively assumed in the analysis. If it is determined that valet processing times can be performed more efficiently and/or actual traffic volumes are lower than projected, a reduced number of valet attendants may be adequate to serve the site.

Central Valet Operations Analysis

Assumptions

The average service rate corresponds to the time it would take a valet parking attendant to obtain a vehicle from an arriving patron, park the vehicle, and return to the valet area. The calculated average service time was 6.6 minutes. This service rate was used for both the primary valet and secondary residential valet. Detailed trip length calculations are included in Attachment C.

The average service rate for departing patrons corresponds to the time it would take the valet to walk to the parked vehicles, return with the vehicle to the valet area, and the patron exits the valet area. The calculated average service time was 6.6 minutes. This service rate was used for both the primary valet and secondary residential valet. Detailed trip length calculations are included in Attachment C.

As separate areas are provided for vehicle pick-up and drop-off, vehicle pick-up is metered by the number of valet attendants on duty and therefore is not expected to exceed the available storage. Therefore, this analysis only examines the drop-off area. The analysis determined the required queue

storage, M, which is exceeded P percent of the time. Since this analysis seeks to ensure that the queue length does not exceed the storage provided, at a level of confidence of 95 percent. A total of five (5) on-street parking spaces are required for the primary valet drop-off stand. A total of three (3) on-street parking spaces are required for the residential guest secondary valet drop-off stand. A total of five (5) on-street parking spaces are required for the valet pick-up stand.

Analysis

An iterative approach was used to determine the number of valet attendants required to accommodate traffic demand during the analysis hour and ensure that the 95th percentile valet queue does not extend beyond the designated valet service area. The valet analysis worksheet is provided in Attachment D.

Results of the valet operations analysis demonstrate that a total of 19 attendants are required under average demand conditions with 26 valet attendants being needed during the highest demand condition without blocking travel lanes on Palermo Avenue at the primary valet stand.

Conclusion

Based on the valet operations analysis performed, it was determined that the 95th percentile valet queues will not extend beyond the valet service area blocking travel lanes on Palermo Avenue. Based upon the conservative assumptions regarding the traffic demand, it was estimated that between 19 and 26 valet attendants may be required during typical and high demand peak hours at the primary valet. The residential guest secondary valet will require one (1) valet attendant under both average and highest demand peak hours. It should be noted that projected vehicular volumes and estimated valet processing times were conservatively assumed in the analysis. If it is determined that valet processing times can be performed more efficiently and/or actual traffic volumes are lower than projected, a reduced number of valet attendants may be adequate to serve the site.

Hotel/South Valet Operations Analysis

Assumptions

The average service rate corresponds to the time it would take a valet parking attendant to obtain a vehicle from an arriving patron, park the vehicle, and return to the valet area. The calculated average service time was 2.6 minutes. Detailed trip length calculations are included in Attachment C.

The average service rate for departing patrons corresponds to the time it would take the valet to walk to the parked vehicle, return with the vehicle to the valet area, and the patron exits the valet area. The calculated average service time was 2.7 minutes. Detailed trip length calculations are included in Attachment C.

The analysis determined the required queue storage, M, which is exceeded P percent of the time. Since this analysis seeks to ensure that the queue length does not exceed the storage provided, at a level of confidence of 95 percent. Seven (7) vehicle drop-off/pick-up spaces are required.

Analysis

An iterative approach was used to determine the number of valet attendants required to accommodate traffic demand during the analysis hour and ensure that the 95th percentile valet queue does not extend beyond the designated valet service area. The valet analysis worksheet is provided in Attachment D.

Results of the valet operations analysis demonstrate that a total of five (5) valet attendants are required under average demand conditions with six (6) valet attendants being needed during the highest demand condition without extending across the crosswalk or blocking Ponce De Leon Boulevard.

Conclusion

Based on the valet operations analysis performed, it was determined that the 95th percentile valet queues will not extend beyond the valet service area across the crosswalk or blocking Ponce De Leon Boulevard. Based upon the conservative assumptions regarding the traffic demand, it was estimated that between five (5) and six (6) valet attendants may be required during typical and high demand peak periods. It should be noted that projected vehicular volumes and estimated valet processing times were conservatively assumed in the analysis. If it is determined that valet processing times can be performed more efficiently and/or actual traffic volumes are lower than projected, a reduced number of valet attendants may be adequate to serve the site.

CONCLUSION

Based on the valet operations analysis performed, it was determined that the 95th percentile valet queues will not extend beyond the valet service area blocking travel lanes on the adjacent roadways or crosswalks. Based upon the conservative assumptions regarding the traffic demand, it is estimated that under average demand conditions the north valet may require 23 attendants, the central valet drop-off may require 19 attendants, and the south valet may require 5 attendants. During the unlikely event that all uses on site experience peak traffic conditions simultaneously, it was estimated that the north valet may require 29 valet attendants, the central valet may require 26 valet attendants, and the hotel/south valet may require six (6) valet attendants. Please note that the number of required valet attendants is consistent with other large scale developments such as entertainment complexes, mixed-use developments, and major hotels in the Miami and Miami Beach areas.

It should be noted that projected vehicular volumes and estimated valet processing times were conservatively assumed in the analysis. If it is determined that valet processing times can be performed more efficiently and/or actual traffic volumes are lower than projected, a reduced number of valet attendants may be adequate to serve the site.
