## Responses to the Atkins Comments on Behalf of City of Coral Gables (September 10, 2014)

### Re: Review of The Collection Residences Traffic Impact Analysis Dated August 2014- 2<sup>nd</sup> Review

1. Appendix A shows a different number of units from the Executive summary, project background and Exhibit 10. Please check the correct DU.

*Response: Appendix A references the Traffic Analysis Methodology which shows the proposed plan at that time the document was approved. Since the approved methodology, the proposed project was updated to a 130 dwelling unit residential building, with 20,000 SF of supermarket space, and 12,000 SF of automobile sale space. The executive summary and project background sections have been updated to show the correct proposed land use units. Exhibit 10 has been updated to show current land use units and corresponding trip generation.*

- a. Please explain your response in the report. It could be added to the methodology section.

*Response: Text has been included in Section 1.3 explaining the difference.*

2. Page 6, Section 2.2: Specify the peak hour period that was used for the study. What hours?

*Response: Level of service standards, as established in the city of Coral Gables Comprehensive Plan, are based on peak-period. Peak period is defined as the average of the two highest consecutive hours of traffic volume during a weekday. Therefore, the analysis is consistent with city's Comprehensive Plan. The peak periods are defined on page 3.*

- a. Generally, when calculating a peak hour factor it is done in a peak hour not a peak period average. However, it is understood that this methodology is described in the City's comprehensive plan and the consultant is following the City's guideline. Please make sure that all legends and write up in report discloses this information. You use the terminology "peak hour" but it should be "peak period average". That should be clear in the report. Please modify.

*Response: Report has been revised to show "peak period " on all appropriate write up and legends.*

3. Page 6, Section 2.2: Please specify what type of factor was used for the turning movement counts and for the traffic machine counts. There should be two factors specified in this section.

*Response: Weekly volume adjustment factor has been included in Section 2.2. The same factor was applied to the raw turning movement counts and traffic machine counts.*

## **EXECUTIVE SUMMARY**

The proposed The Collection Residences project will be located on the south side of Bird Road between Salzedo and Aurora Streets in Coral Gables, Florida. The proposed mixed-use development will replace existing office and commercial uses with a 130 dwelling unit residential building, 20,000 SF of supermarket space, and 12,000 SF of automobile sale space. Project buildout is anticipated in 2015.

An assessment of the traffic impacts associated with the proposed project was performed in accordance with the requirements of the city of Coral Gables. The analysis shows that the project would not adversely impact the roadway links and intersections that were analyzed within the study area.

The suitability to accommodate pedestrians at the study intersection was also tested. The signal timing at the analyzed intersection was found to be adequate for pedestrian movements. Pedestrian mobility, within and around the site, is encouraged by providing pedestrian amenities, and minimizing conflicts with vehicular traffic.

## **1.0 INTRODUCTION**

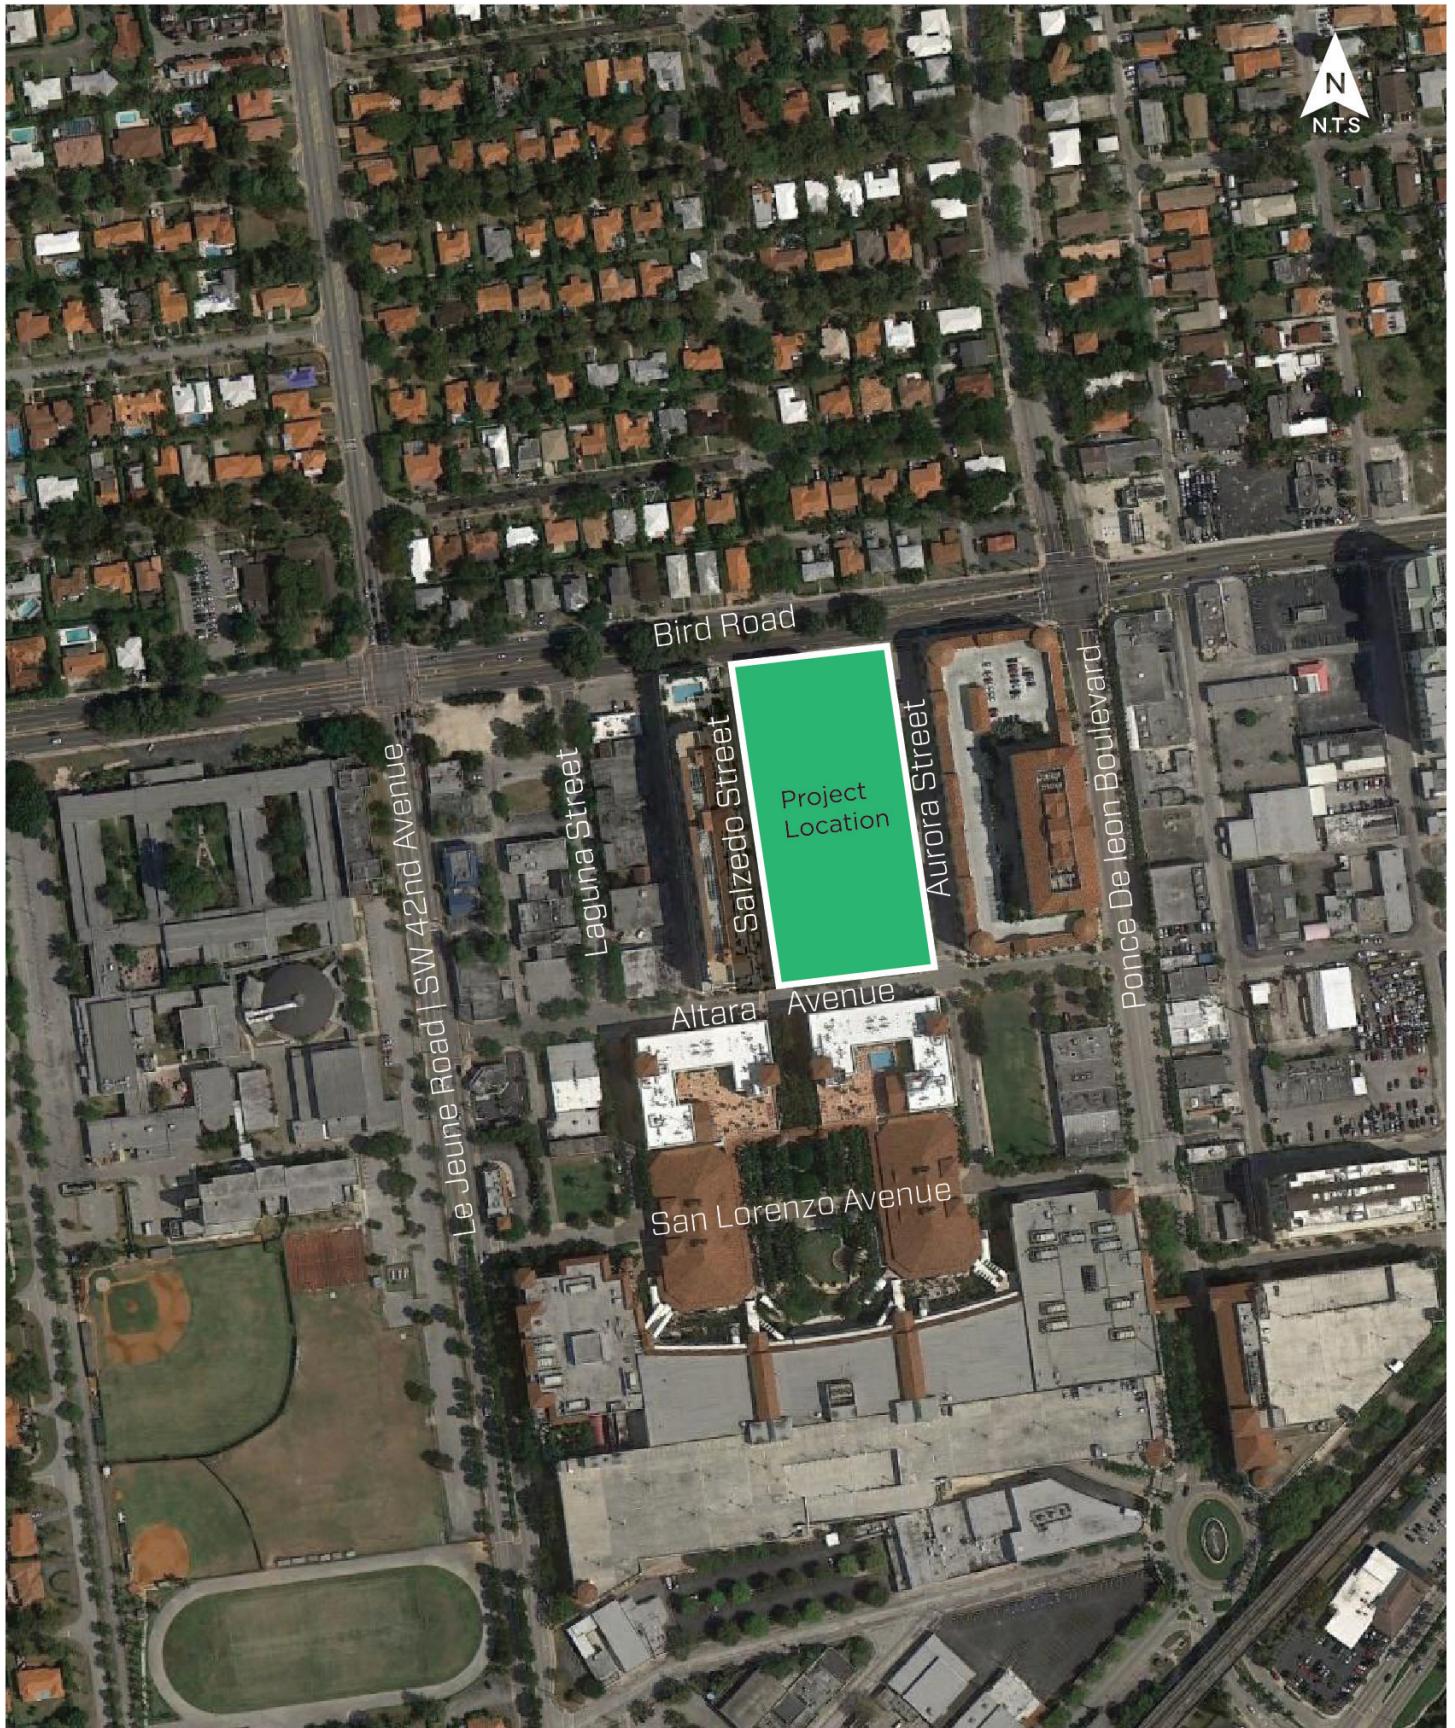

### **1.1 Project Background**

The proposed The Collection Residences will be located on the south side of Bird Road between Salzedo and Aurora Streets in Coral Gables, Florida (See Exhibit 1). The site is located within the Gables Re-development Infill District (GRID), the city's traffic concurrency exception area. The proposed mixed-use development plan would consist of a 130 dwelling unit residential building, 20,000 SF of supermarket space, and 12,000 SF of automobile sale space. Project buildout is anticipated in 2015.

The project proposes onsite parking garages providing a total of 602 parking spaces. The provided spaces meet the city's parking requirement. Access to and from the parking garage for the residential area will be provided on Salzedo Street and Aurora Streets. Access to and from the parking garage for the supermarket and automobile sales area will be provided on Salzedo Street. In addition a valet drop-off / pick-up area is proposed accessing Altara Avenue. This traffic study is consistent with the methodology previously discussed with and agreed to by the city of Coral Gables Public Works Department.

### **1.2 Study Objective**

The purpose of the study is to provide a traffic study that meets the requirements of the city of Coral Gables for the project. This study includes vehicular flow, trip generation, roadway and intersection analyses, and a review of pedestrian issues.

COLLECTION RESIDENCES  
TRAFFIC STUDY

EXHIBIT 1 | Location Map

## 1.3 Study Area and Methodology

The analysis undertaken follows the study methodology previously discussed with and approved by the city of Coral Gables Public Works Department (See Appendix A). The Traffic Analysis Methodology referenced in Appendix A shows the proposed plan at the time the document was approved. Since the approved methodology, the proposed project was updated and is detailed in the project background section. A synopsis of the methodology is as follows:

- Traffic Counts (Intersections) – Two-hour turning movement counts were collected for the AM (7-9 AM) and PM (4-6 PM) hours on January 15, 2014 at the following intersections:
  - SW 40<sup>th</sup> Street (Bird Road) / Ponce de Leon Boulevard (S)
  - SW 40<sup>th</sup> Street (Bird Road) / LeJeune Road (S)
  - LeJeune Road / Altara Avenue (S)
  - SW 40<sup>th</sup> Street (Bird Road) / Aurora Street (U)
  - SW 40<sup>th</sup> Street (Bird Road) / Salzedo Street (U)
  - Ponce de Leon Boulevard / Altara Avenue (U)
- Traffic Counts (Segments) - 48-hour machine counts, summarized at 15-minute intervals, were taken from January 14, 2014 to January 15, 2014 at the following roadway segments:
  - Aurora Street between SW 40<sup>th</sup> Street (Bird Road) and Altara Avenue
  - Salzedo Street between SW 40<sup>th</sup> Street (Bird Road) and Altara Avenue
  - Altara Avenue between LeJeune Road and Ponce de Leon Boulevard
- Signal Location and Timing: Existing signal phasing and timing for signalized intersections were obtained from Miami-Dade County. Signal timings are included in Appendix B.
- Future Transportation Projects: The 2013 Transportation Improvement Program (TIP) and the 2035 Miami-Dade Long Range Transportation Plan (LRTP) were reviewed to include future transportation projects which add capacity to the network.

- Background Traffic. Average Annual Daily Traffic (AADT) volumes were reviewed to determine the appropriate background growth applicable to this area. This growth rate was applied to existing traffic counts to establish future traffic conditions without project for the anticipated project buildout year.
- Committed Developments. The city was consulted to determine any committed development in the vicinity of the project site. Traffic associated with these projects was considered in the analysis.
- Project Traffic. Trip generation for the project was estimated using trip generation information published by the Institute of Transportation Engineers (ITE) publication Trip Generation Manual, 9th Edition. Net new external project traffic was assigned to the adjacent street network using the appropriate cardinal distribution from the Miami-Dade Long Range Transportation Plan, published by the Metropolitan Planning Organization.
- Future Traffic Conditions. Project traffic was combined with projections of future traffic without project. Roadway link and intersection capacity analyses were performed for this condition.
- Pedestrian accessibility to and from the project, as well as pedestrian access continuity on the sidewalks around the project was assessed.

## 2.0 DATA COLLECTION

Data collection for this study included roadway characteristics, intersection traffic counts, signal timing, and seasonal adjustment factors. The data collection effort is described in the following sections.

### 2.1 Roadway Characteristics

#### SW 40<sup>th</sup> Street (Bird Road)

SW 40<sup>th</sup> Street is a major arterial that provides east/west access throughout Miami-Dade County. Within the study area, SW 40<sup>th</sup> Street is a two-way, four-lane, divided roadway. On street parking is prohibited. FDOT has jurisdiction on this roadway. The speed limit is 40 mph.

#### SW 42<sup>nd</sup> Avenue (LeJeune Road)

SW 42<sup>nd</sup> Avenue is a major arterial that provides north/south access throughout Miami-Dade County. Within the study area, LeJeune Road is a two-way, four-lane, divided roadway. On street parking is prohibited. FDOT has jurisdiction on this roadway. The speed limit is 40 mph.

#### Ponce de Leon Boulevard

Ponce de Leon Boulevard is a minor arterial that provides north/south access throughout the city of Coral Gables Central Business District (CBD). Within the study area, Ponce de Leon Boulevard is a two-way, four-lane, undivided roadway. On-street, metered, parking is provided on the east and west side of the roadway south of Bird Road. The city of Coral Gables operates and maintains Ponce de Leon Boulevard. The posted speed limit is 30 mph.

#### Aurora Street

Aurora Street is a local roadway that provides north/south access within the study area. Aurora Street is a two-way, two-lane, undivided roadway with metered, on-street, parking on both sides. The city of Coral Gables operates and maintains Aurora Street. The speed limit is not posted within the study limits.

### Altara Avenue

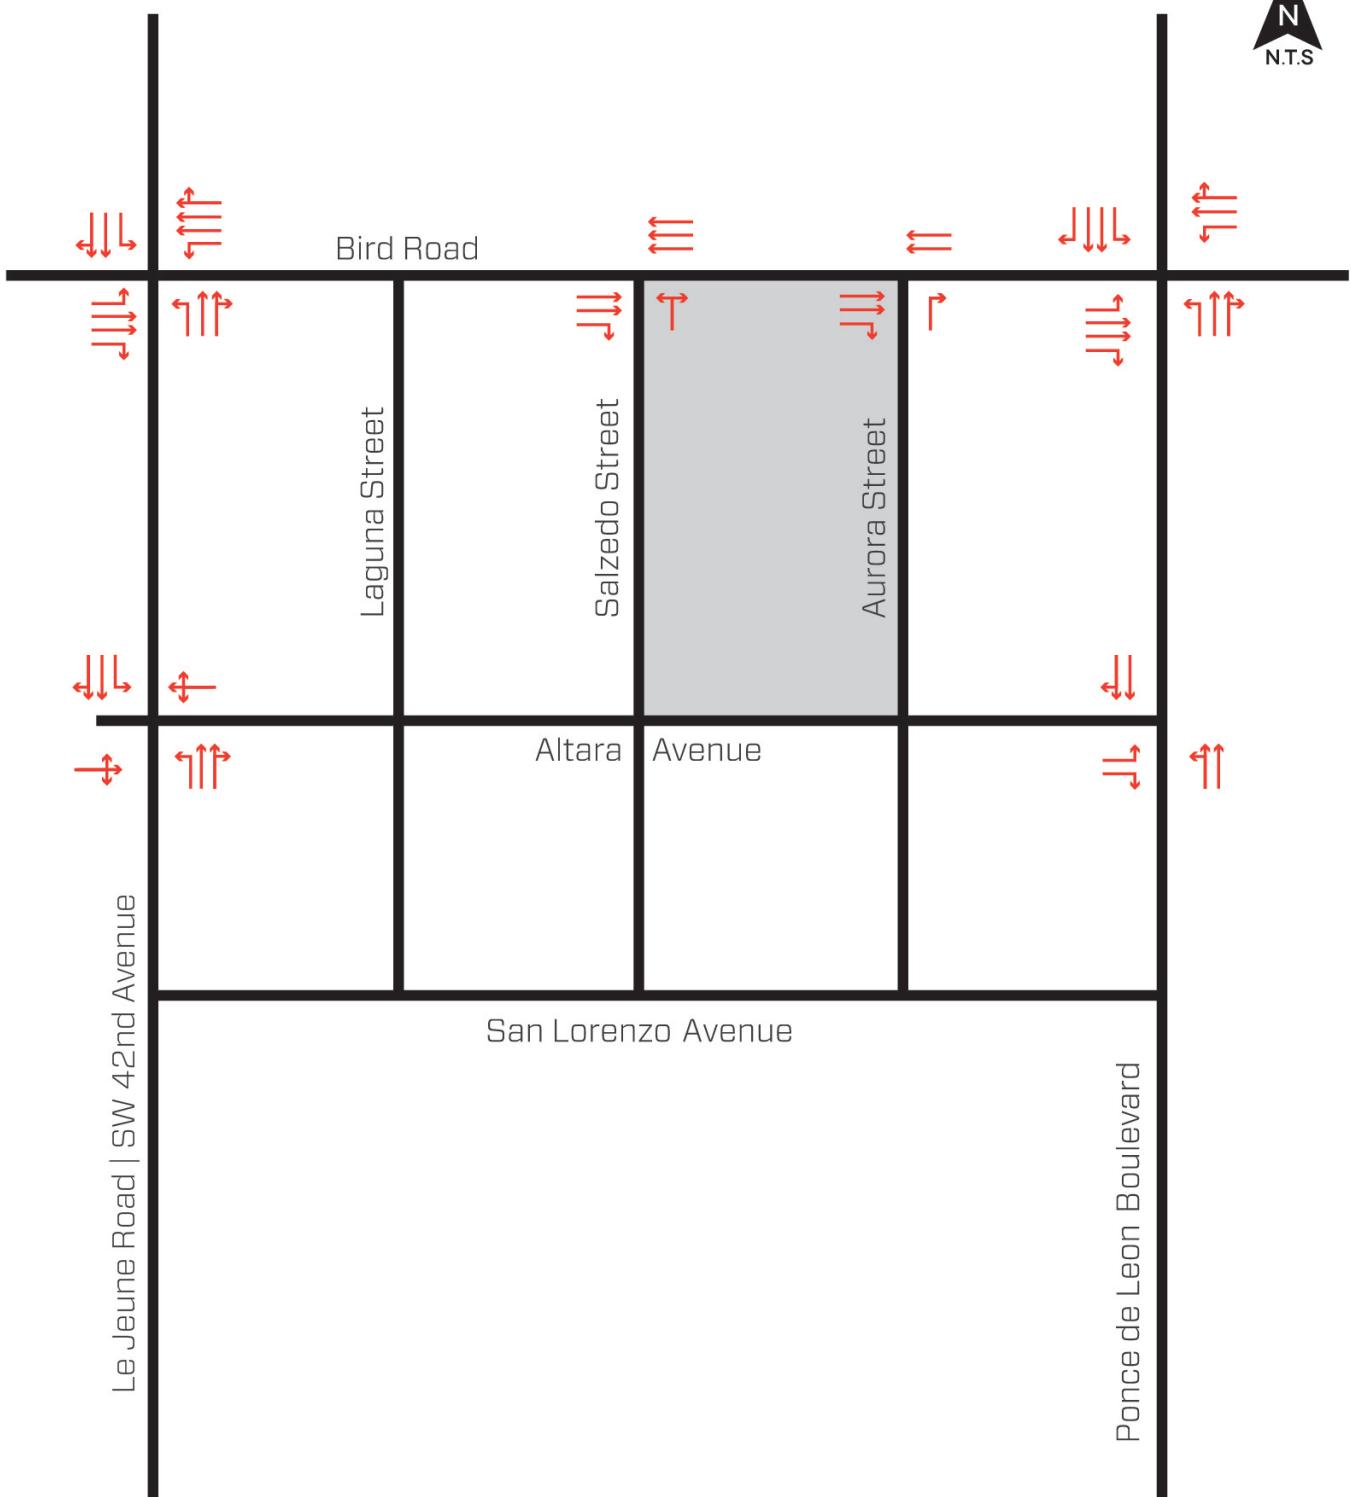

Altara Avenue is a local roadway that provides east/west access within the study area. Altara Avenue is a two-way, two-lane, undivided roadway with metered, on-street, parking on both sides. The city of Coral Gables operates and maintains Altara Avenue. The speed limit is not posted within the study limits.

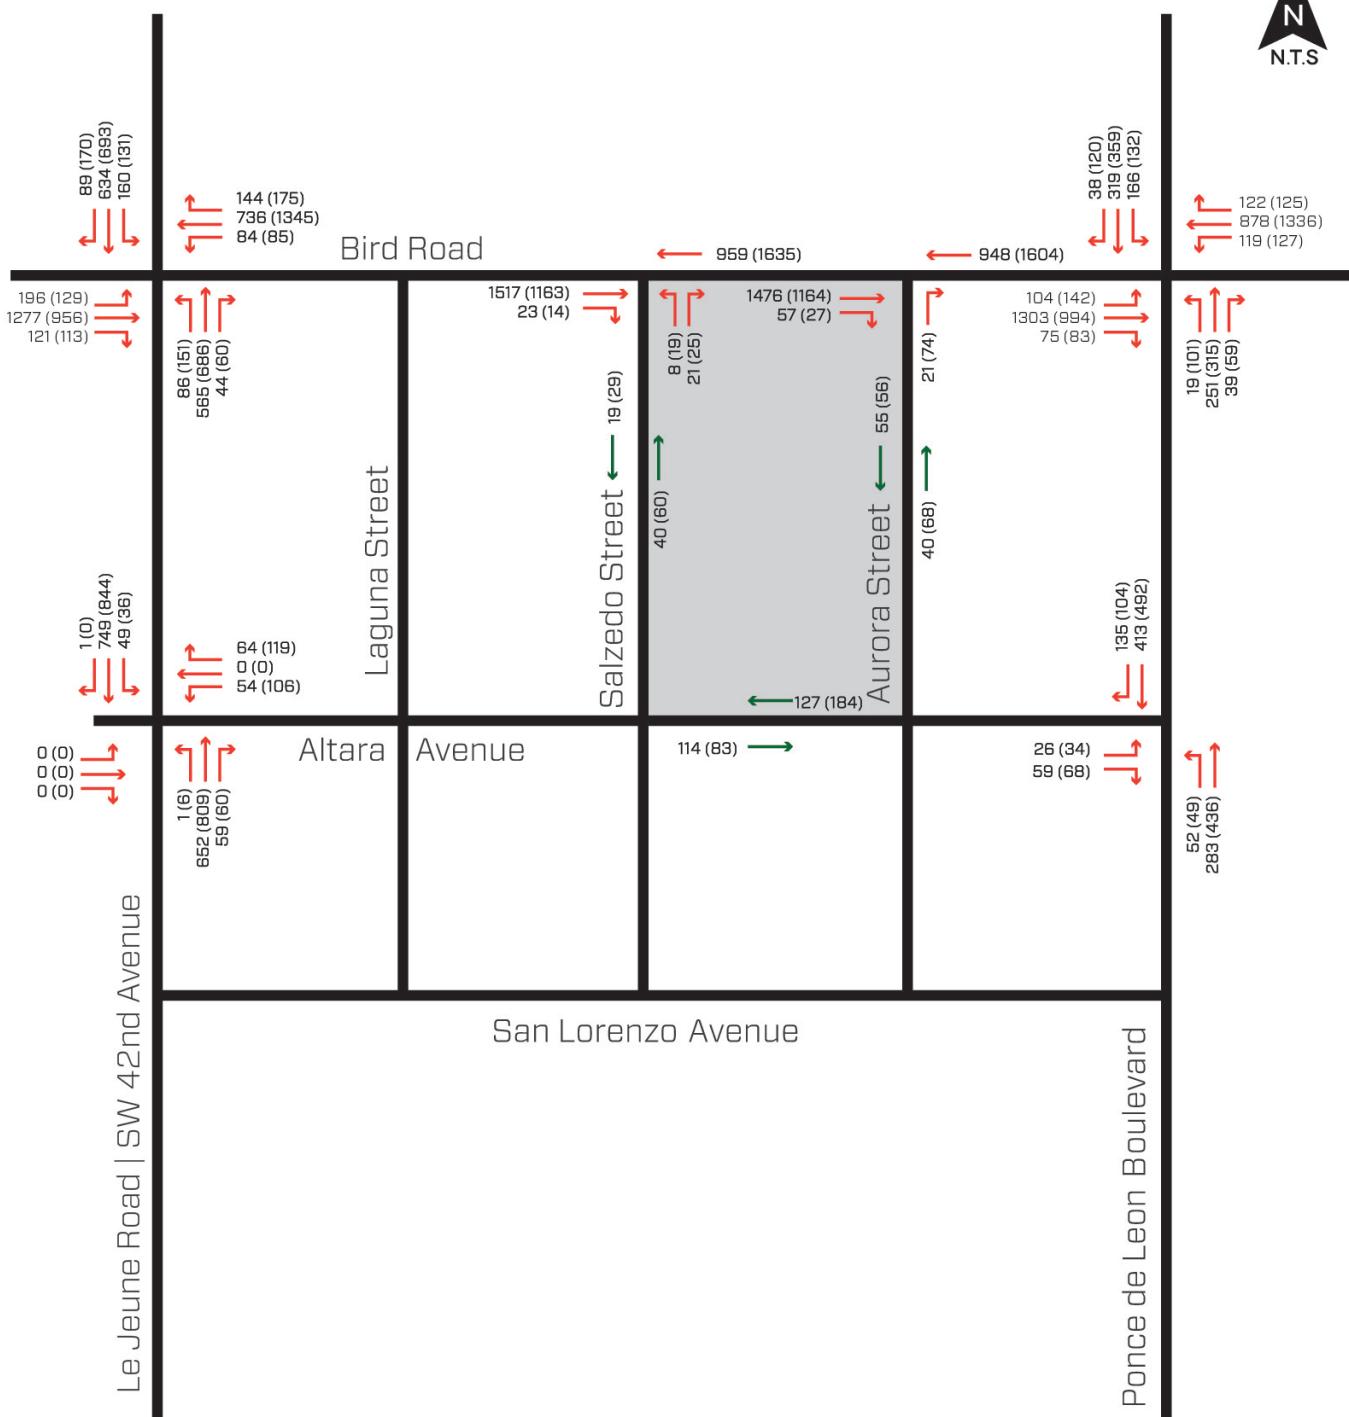

## **2.2 Traffic Counts**

Forty-eight hour traffic machine counts were collected on January 14 through January 15, 2014 at Salzedo Street, Aurora Street, and Altara Avenue. Vehicle turning movement counts were taken on January 15, 2014 at the study intersections during the AM (7-9 AM) and PM (4-6 PM) peak periods. The counts were adjusted to reflect average annual daily traffic conditions using the latest weekly volume adjustment factors were obtained from FDOT. A weekly volume adjustment factor of 1.00 (Miami-Dade County South) corresponding to the dates of the counts was used to adjust the raw turning movement counts to peak seasonal conditions. Similarly a weekly volume adjustment factor of 1.00 corresponding to the dates of the counts was used to adjust the raw traffic machine counts to peak seasonal conditions. FDOT season factor report and traffic counts are provided in Appendix B.

## **2.3 Intersection Data**

Signal timing data was obtained from Miami-Dade County for the signalized intersections analyzed in this study. This information was used for the signal phasing and timing required for the intersection capacity analysis. A field survey was also conducted to obtain the intersection lane configurations to be used in the intersection analysis. Exhibit 2 shows the existing lane configurations at the analyzed intersections. Existing volumes for the morning and afternoon peak period at the segments and intersections analyzed are shown in Exhibit 3. The signal timings are also provided in Appendix B.

#### LEGEND

00 = AM Peak Hour Volume  
(00) = PM Peak Hour volume

Roadway Link Volumes →  
Intersection Volumes ↗

## **2.4 Walking / Other Modes of Transportation**

Pedestrian activity is an essential element within the CBD of Coral Gables. The Coral Gables Trolley service (which traverses the Ponce de Leon Boulevard corridor) provides frequent service to the area. The Douglas Road Metrorail Station is located approximately 0.3 miles from the project site. The project area is also serviced by the Miami-Dade Transit bus routes 40 and 42. The Project site is located in an area where pedestrian activity is common between existing site and surrounding properties.

- Village of Merrick Park is located just south of Altara Avenue
- The Collection is directly west of the project site between Aurora Street and Ponce de Leon Boulevard

## **2.5 Roadway Capacity Analysis**

The FDOTs generalized service volume tables provide the maximum volume for a specific Level of Service (LOS). LOS is a qualitative assessment of a road's operating conditions and is represented by the letters A through F, where A is free flow (best condition) and F is the most congested condition.

The proposed project is located within the city of Coral Gables Redevelopment and Infill District (GRID), which is a Transportation Concurrency Area established by the city to promote development within its boundaries. In essence, this ordinance establishes that roadways within the geographical area of the GRID are exempt from the citywide traffic LOS Standards.

Exhibit 4 shows roadway link analysis for the study area segments based on the FDOT generalized peak hour directional service volume tables. All roadways currently operate within the city's LOS standards (LOS E).

**Exhibit 4**  
**Existing Roadway Capacity Analysis**  
**Weekday AM and PM Peak Period Conditions**

Roadway	Direction	# of Lanes	AM Peak Volume	PM Peak Volume	LOS Std	SV <sup>1</sup>	Meet LOS Std?

	WB	1LU	127	184	E	575	Yes

<sup>1</sup> SV for Class II Arterial -10% for Non-State Road -20% for undivided segment without turn lanes.

## **2.6 Intersection Capacity Analysis**

The Highway Capacity Software (HCS), based on procedures of the *2010 Highway Capacity Manual*, were used to perform intersection capacity analysis at the analyzed intersections. Exhibit 5 shows the resulting LOS for existing conditions during morning and afternoon peak periods.

It should be noted that the software used for the analysis, *HCS*, only allows for analysis of un-signalized intersections where the main street has a maximum of 2 directional lanes. Bird Road westbound has 2 departing lanes at the intersection with Ponce de Leon Boulevard. It widens to 3 westbound through lanes as it approaches the intersection with Salzedo Street. Given the proximity of the opening, the analysis of the Bird Road and Salzedo Street intersection was not adjusted accordingly. The results of the analysis presented in this study overestimate the quality of operations since gaps available to traffic accessing Bird Road from Salzedo Street would be underestimated.

All the intersections operate within the city's LOS standards (LOS E). Analysis worksheets are included in Appendix C.

Source: David Plummer & Associates

### **3.0 PLANNED AND PROGRAMMED ROADWAY IMPROVEMENTS**

The 2014 Miami-Dade County Transportation Improvement Program (TIP) and the 2035 Miami-Dade Long Range Transportation Plan were reviewed to identify any programmed or planned projects within the limits of the study area established. These documents show no officially programmed or planned capacity improvement projects within the study area.

## 4.0 FUTURE TRAFFIC CONDITIONS

### 4.1 Background Traffic and Committed Developments

Average Daily Traffic counts published by the Miami-Dade Public Works Department and the FDOT were reviewed to determine historic growth in the area. This analysis indicated that traffic has decreased in the past years. However, a conservative 1.0% annual growth rate was used for this study. Historic growth rate documentation is included in Appendix B.

The city was consulted to determine any committed development in the vicinity of the project site. Three committed developments were considered for estimating future traffic volumes in this study: Merrick Manor, Chase Bank, and Ponce & Bird. Exhibit 6 provides a tabulation of AM and PM peak hour trips generated by the committed development, along with the approved land uses. It should be noted that ITE does not provide equations for the AM peak hour for land use 826. Committed development information collected from past studies is included in Appendix D.

**Exhibit 6**  
**Committed Development Trip Generation\***

Project	ITE Land Use	Size/Units	AM Peak Hour Vehicle Trips			PM Peak Hour Vehicle Trips		
			In	Out	Total	In	Out	Total
Merrick Manor	Apartments Land Use 220	188 DU	19	77	96	79	42	121
	Specialty Retail Land Use 826	1,900 SF	0	0	0	2	3	5

	Restaurant Land Use 931	3,530 SF	0	0	0	18	8	26

\* Gross vehicle trip ends. Appendix D reflects adjustments for existing land uses, pass-by, internal, and transit trips.

## 4.2 Future Without Project Roadway Capacity Analysis

Future without project conditions was obtained by adding background traffic with committed development trips. Exhibit 7 shows the future without project AM and PM peak period traffic at each roadway segment. Exhibit 8 shows the projected roadway volumes for future without project traffic.

**Exhibit 7**  
**Future without Project Roadway Capacity Analysis**  
**Weekday AM and PM Peak Period Conditions**

Roadway	Direction	# of Lanes	AM Peak Volume	PM Peak Volume	LOS Std	SV <sup>1</sup>	Meet LOS Std?

## 4.4 Project Trip Generation

Trip generation for the proposed project and the existing use was estimated using Trip Generation 2013, Trafficware software based on the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition. This manual provides gross trip generation rates and/or equations by land use type. These rates and equations estimate vehicle trip ends at a free-standing site's driveways. See Appendix F for project trip generation worksheets.

The proposed development plan incorporates residential and retail land uses, which can satisfy the work trip, dining, and retail needs for some residents, employees, and visitors without making a trip off-site. An internalization matrix was developed to establish the appropriate number of internal project trips. Internal capture rates used are also included in Appendix F.

The Trip Generation Handbook User's Guide and Handbook includes data on pass-by trips. Pass-by trips are those trips that are attracted from the traffic passing the site on an adjacent street. Since the pass-by trips are already on the street system, the total trip generation from a site was adjusted to estimate the new external traffic actually added to the street system. The average pass-by rate published by ITE for Supermarkets was used to establish the pass-by component. Although ITE only provides data for the PM peak hour, the supermarket will attract patrons from the adjacent traffic flow throughout the day. Therefore, the same ratio of pass-by to total trips was used during both the am and pm peak hour for this use.

In addition, the project site is located in an area where pedestrian activity is common between the existing site and surrounding properties. The project site is in an area served by Miami-Dade Transit bus routes and in walking distance to the Coral Gables trolley and the Douglas Road Metrorail Station. A 5% adjustment was applied to the trip generation of the existing and proposed uses to account for other modes of transportation. The project trip generation summary is provided in Exhibit 10.

**Exhibit 10**  
**Project Trip Generation Summary**

Proposed ITE Land Use Designation <sup>1</sup>	Size/Units	AM Peak Hour Vehicle Trips			PM Peak Hour Vehicle Trips		
		In	Out	Total	In	Out	Total
Residential Condominiums (Land Use 230)	130 DU	11	53	64	50	25	75
Automobile Sales (Land Use 841)	12,000 SF	17	6	23	13	18	31

<b>Net External Trips (Existing)</b>		<b>118</b>	<b>19</b>	<b>137</b>	<b>28</b>	<b>109</b>	<b>137</b>

Proposed Uses	41	63	104	95	75	170
Existing Uses	-118	-19	-137	-28	-109	-137
<b>Net New External Trips</b>	<b>-77</b>	<b>44</b>	<b>-33</b>	<b>67</b>	<b>-34</b>	<b>33</b>

<sup>1</sup> Based on ITE Trip Generation Manual, Ninth Edition,

<sup>2</sup> Based on ITE Trip Generation Manual User's Guide and Handbook, Ninth Edition

The project trip generation summary shows that for the AM peak hour the proposed project will be less than the existing trips. However to provide a conservative analysis no trips were deducted.

## 4.5 Project Trip Assignment

Project traffic was distributed and assigned to the study area using the Cardinal Distribution for TAZ 1081 shown in Exhibit 11. The Cardinal Distribution gives a generalized distribution of trips from a TAZ to other parts of Miami-Dade County. The distribution can be summarized as followed: 36.45% to the north, 17.67% to the south, 16.28% to the east, and 29.59% to the west. For estimating trip distribution for the project traffic, consideration was given to conditions such as the roadway network accessed by the project traffic, roadways available to travel in the desired direction, and attractiveness of traveling on a specific roadway. Project trip distribution for the proposed project is shown in Exhibit 12.

**Exhibit 11**  
**Cardinal Distribution (TAZ 1081)**

Direction	Distribution
NNE	21.00%
ENE	11.99%
ESE	4.29%
SSE	2.73%
SSW	14.93%
WSW	19.25%
WNW	10.34%
NNW	15.45%
Total	100.00%

Source: Miami-Dade Long Range Transportation Plan

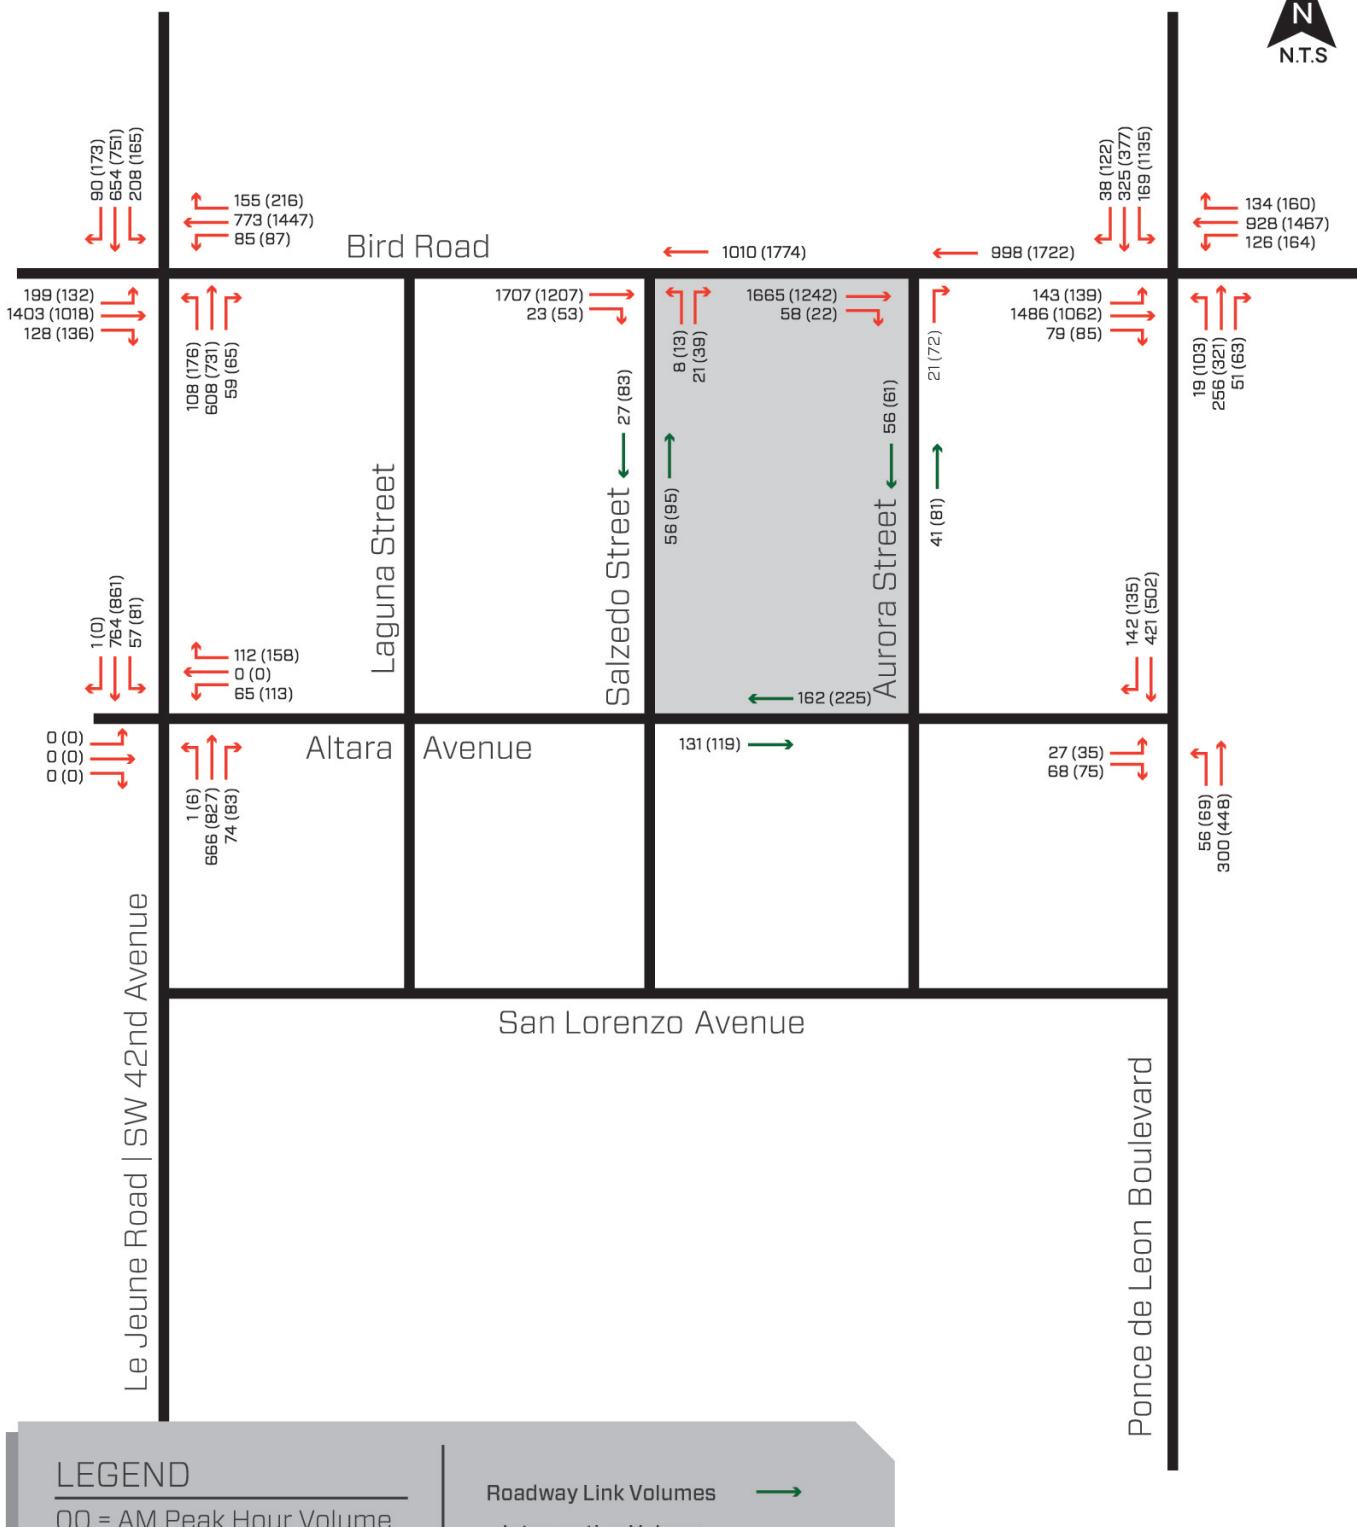

## 4.6 Future With Project Roadway Capacity Analysis

Trip assignments in the previous sections and traffic projections for the project were combined to obtain the total traffic on the analyzed roadway segments. Exhibit 13 shows roadway capacity for the future with project during the AM and PM peak period for each roadway segment. All the segments under study meet the city's LOS standards (LOS E). Exhibit 14 shows the projected AM and PM roadway volumes.

**Exhibit 13**  
**Future with Project Roadway Capacity Analysis**  
**Weekday AM and PM Peak Period Conditions**

## **4.7 Future With Project Intersection Capacity Analysis**

The trip assignments in the previous section, traffic projections for the project, committed developments and background growth were combined to obtain future traffic with project at the analyzed intersections. Exhibit 15 shows the resulting LOS for the morning and afternoon peak conditions for future with project. Capacity worksheets are included in Appendix C. Exhibit 14 also shows the projected turning movement volumes for future with project.

As with the future without project conditions, the minor approach of LeJeune Road and Altara Avenue intersection experiences a slightly higher delay during the afternoon peak period. To mitigate this delay, minor signal timing improvement is needed for future conditions with and without the project. With this improvement in place, all intersections analyzed are projected to operate within the city's LOS standard during the morning and afternoon peak periods.

\* PM Peak LOS with signal timing improvements

## 5.0 PEDESTRIAN ISSUES

The signal phasing and timing plans were assessed for suitability of pedestrian crossings. This assessment was done consistent with the recommendations published in the *Manual on Uniform Traffic Control Devices for Streets and Highways* (MUTCD), by the U.S. Department of Transportation. Appendix E contains the analysis performed for the signalized intersections under study. The assessment sheet shows the following information:

1. Signal phasing and timing plan
2. Total roadway width as measured in the field
3. Normal walking speed obtained from the MUTCD
4. The total time required to cross the street based on items 2 and 3 above
5. The minimum time required for the flashing “*Don’t Walk*” indication calculated based on the MUTCD recommendations.
6. The minimum required “Walk” Indication, which is the difference between the total time required to cross the street and the “*Don’t Walk*” indication or 4 to 7 seconds as required by the MUTCD, whichever is longer.
7. The Yellow and All Red which is provided for the appropriate signal phase.

The analysis shows that the available time for pedestrians to cross the analyzed intersections are adequate to cross the street. Therefore, pedestrians will be adequately served by the existing signal phasing and timing plan at signalized intersections.

## **6.0 CONCLUSIONS**

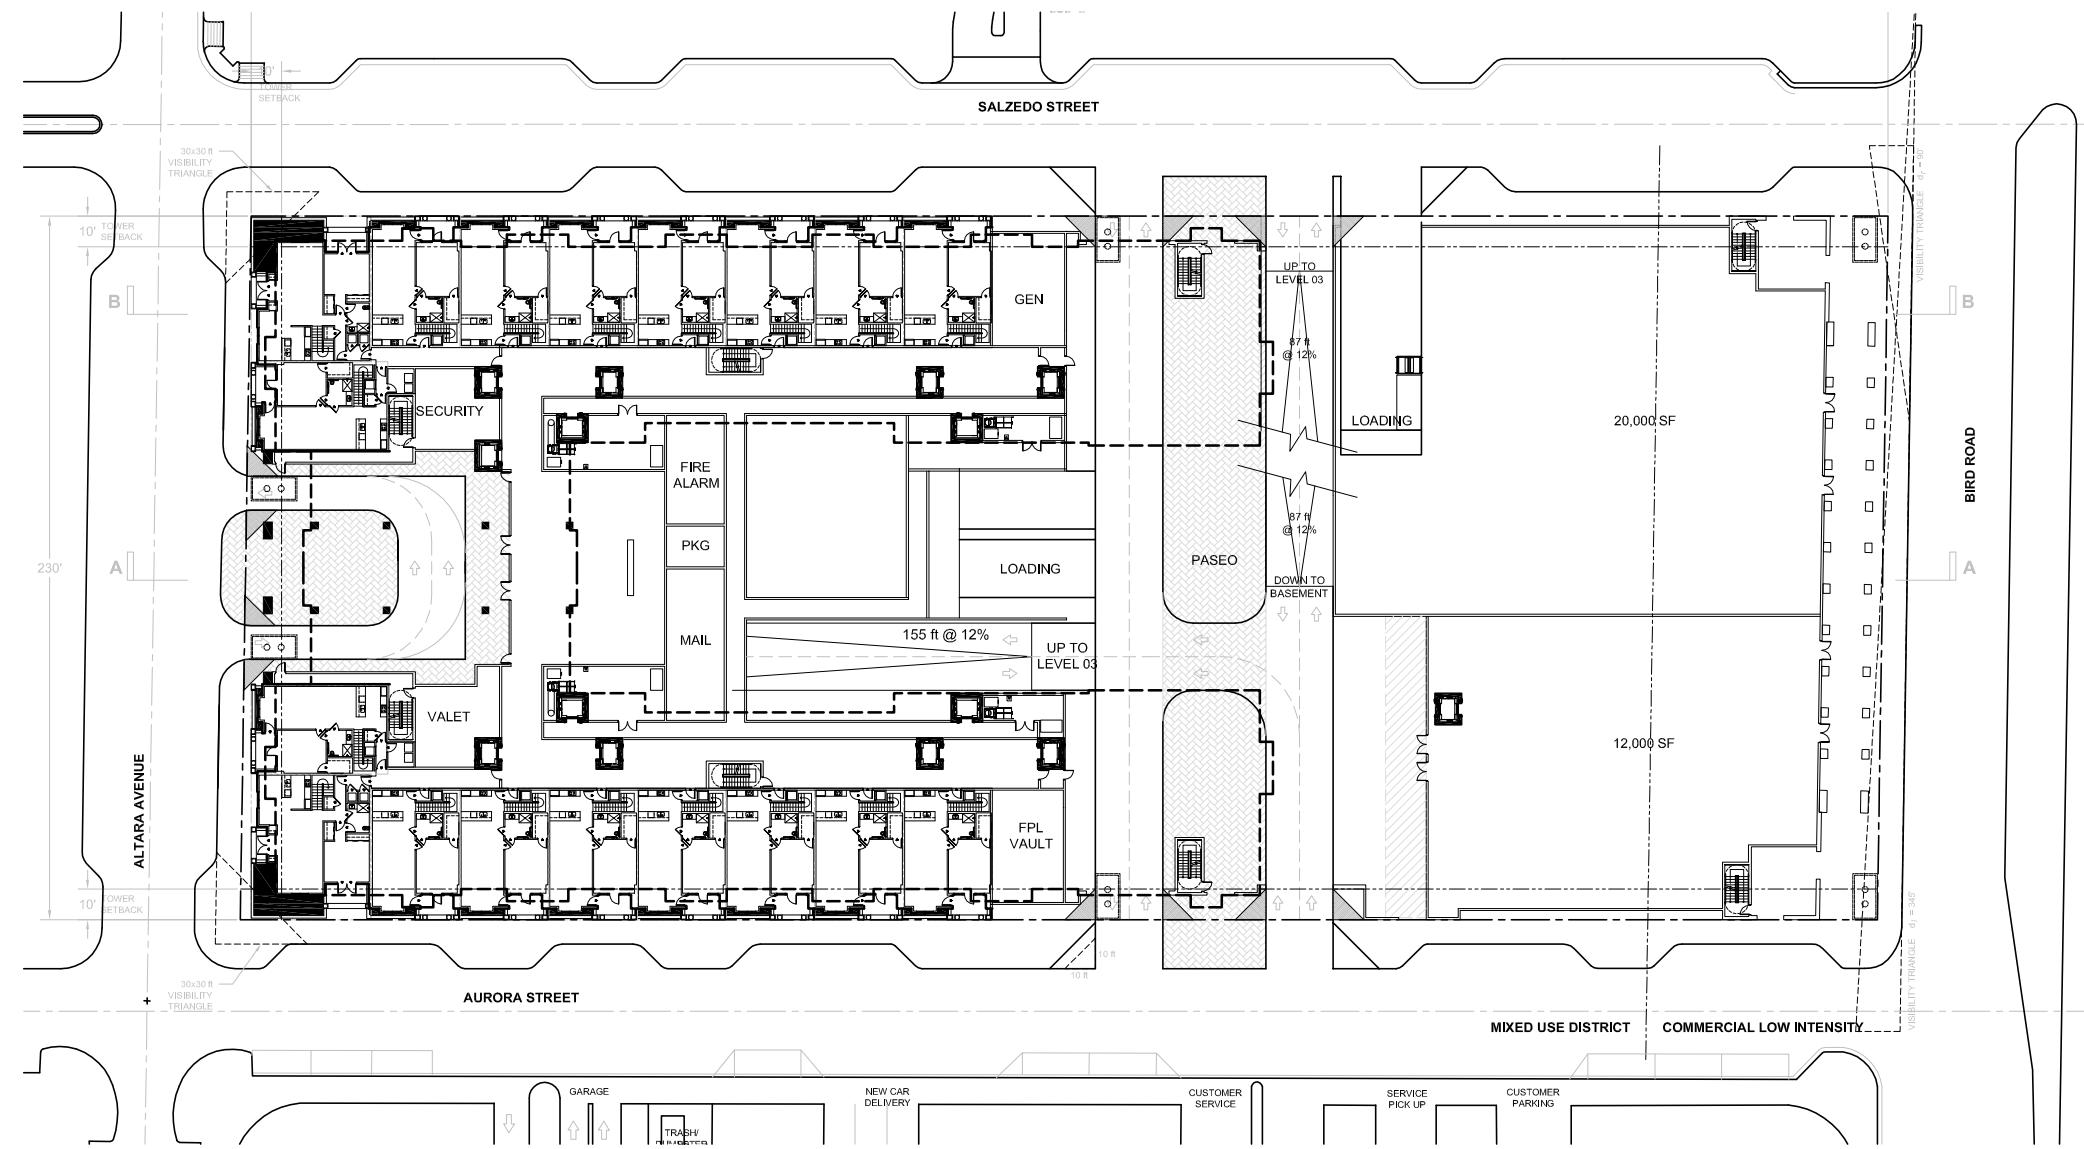

An assessment of the traffic impacts associated with the proposed project was performed in accordance with the requirements of the city of Coral Gables. The analysis shows that the project would not adversely impact the roadway links and intersections that were analyzed within the study area.

The suitability to accommodate pedestrians at the study intersection was also tested. The signal timing at the analyzed intersection was found to be adequate for pedestrian movements. Pedestrian mobility, within and around the site, is encouraged by providing pedestrian amenities, and minimizing conflicts with vehicular traffic.

Report \_revised Sept 2014

## **Site Plan and Methodology**

## Bird Road at Aurora Street Traffic Analysis Methodology

November 20, 2013

DPA will undertake a Traffic Impact Analysis as required by the City of Coral Gables. The analyses are for the existing conditions, future conditions with committed development, and the future conditions with project and committed developments.

The site is located on the south Side of Bird Road between Salzedo and Aurora Streets in Coral Gables, FL.

**Existing Site:** Office and commercial uses

**Proposed Plan:** 288 residential units  
39,000 SF of retail space

The methodology is outlined below:

- Traffic Counts (Intersections) – Two-hour turning movement counts will be collected for the AM (7-9 AM) and PM (4-6 PM) hours on a typical weekday at the following intersections:
  - Ponce de Leon Boulevard / SW 40<sup>th</sup> Street (Bird Road) (S)
  - LeJeune Road / SW 40<sup>th</sup> Street (Bird Road) (S)
  - LeJeune Road / Altara Avenue (S)
  - SW 40<sup>th</sup> Street (Bird Road) / Aurora Street (U)
  - SW 40<sup>th</sup> Street (Bird Road) / Salzedo Street (U)
  - Ponce de Leon Boulevard / Altara Avenue (U)
- S= Signalized  
U=Un-signalized
- Traffic Counts (Segments) - 48-hour machine counts, summarized at 15-minute intervals, will be taken during a typical weekday (Tuesday through Thursday only) at the following roadway segments:
  - Aurora Street between SW 40<sup>th</sup> Street (Bird Road) and Altara Avenue
  - Salzedo Street between SW 40<sup>th</sup> Street (Bird Road) and Altara Avenue
  - Altara Avenue between LeJeune Road and Ponce de Leon Boulevard
- Signal Location and Timing – Existing signal phasing and timing for the signalized intersection will be obtained from Miami-Dade County.

- Trip Generation – project trips will be estimated using trip generation information published by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9<sup>th</sup> Edition.
- Trip Distribution / Trip Assignment – Net new external project traffic will be assigned to the adjacent street network using the appropriate cardinal distribution from the Metro-Dade Long Range Transportation Plan Update, published by the Metropolitan Planning Organization. Normal traffic patterns will also be considered when assigning project trips.
- Background Traffic - Available Florida Department of Transportation (FDOT) and Miami-Dade County (MDC) counts will be consulted to determine a growth factor consistent with historical annual growth in the area. The growth factor will be applied to the existing traffic volumes to establish background traffic
- Future Transportation Projects – The 2013 TIP and the 2035 LRTP will be reviewed and considered in the analysis at project build-out.
- Committed Developments – the city will be consulted to determine any committed development within a ½ -mile radius of the project site.
- Intersection analysis will be done using Highway Capacity Software (HCS) based on the 2010 Highway Capacity Manual (HCM). Operation analysis at driveways providing access to/from the site will also be conducted.
- Link /Segment capacity will be estimated using generalized vehicular capacities from the latest FDOT LOS Manual, or other acceptable equivalent.

## **Appendix D**

### **Committed Development Information**

## Project Traffic

This section of the report will cover the project traffic for the existing and proposed land uses. In addition to calculating the trip generation, site traffic internalization as well as vehicle occupancy and transit reduction factors were utilized to determine the future project traffic in the subsequent sections.

### Trip Generation

The trip generation characteristics for the subject project were obtained from ITE's Trip Generation Manual, 7<sup>th</sup> Ed. ITE's Land Use (LU) 310: Hotel, LU 710: General Office, LU 814: Specialty Retail and LU 931: Restaurant were used to determine the trip generation rates for the proposed redevelopment.

The Trip Generation calculations results of the proposed redevelopment are summarized below. The ITE rates and percentages for the PM Peak Hour Trips are included in corresponding tab. Table 6 below summarizes the greatest traffic impact associated with the subject redevelopment, which occurs during the PM peak hour(s).

Lastly, the trip generation was converted to net vehicle trip by utilizing the City's Person Trip Methodology. This methodology uses 16% vehicle occupancy, an 8.0% transit reduction factor and a 5.0 % pedestrian/ bicycle reduction. These factors are consistent with the values used in the City's DRI – Increment II for the SE Overtown.

**Table 6: PM Trip Generation Summary (Office + Hotel)**

Land Use (LU)	Units	ITE LU CODE	PM PEAK HOUR TRIPS			
			ITE TRIP GENERATION RATE	IN Trips	OUT Trips	TOTAL TRIPS
<b>Existing</b>						
Specialty Retail	25.750 T.G.S.F	814	2.71	31	39	70
<b>Proposed</b>						
Hotel	262 Rooms	310	0.59	81	73	155
General Office Building	269.510 T.G.S.F	710	1.49	67	334	402
Specialty Retail	3.190 T.G.S.F	814	2.71	4	5	9
Restaurant	3.530 T.G.S.F	931	7.49	18	9	26
<b>Site Trip Generation</b>				<b>170</b>	<b>421</b>	<b>591</b>
Project Internalization @	10.0% Of Site Trips			<b>17</b>	<b>42</b>	<b>59</b>
<b>Gross Vehicle Trips (w/ Internalization)</b>				<b>153</b>	<b>379</b>	<b>532</b>
Pass-By Trips (Restaurant)	44.44% Of Site Trips			1	0	1
<b>Gross Vehicle Trips (w/ Internalization &amp; Pass-By Trips)</b>				<b>152</b>	<b>379</b>	<b>531</b>
Vehicle Occupancy Adjustment @	16.0% Of Gross Trips			24	61	85
Transit Trip Reduction @	8.0% Of Gross Trips			12	30	42
Pedestrian/Bicycle Trip Reduction @	5.0% Of Gross Trips			8	19	27
<b>Net Vehicle Trips</b>				<b>77</b>	<b>230</b>	<b>307</b>

## Trip Distribution

The Traffic Analysis Zone (TAZ) for the subject redevelopment is TAZ 1080 as assigned by the Metropolitan Planning Organization's (MPO). The County's TAZ are included in the corresponding tab.

The corresponding traffic distribution being assigned to the following directions are outlined in Table 7. The corresponding tab includes a TAZ Map and the corresponding Directional Distribution Summary for this zone utilizing the 2005 Cost Feasible Plan.

**Table 7: Cardinal Distribution**

DIRECTION	DISTRIBUTION %
NNE	18.95
ENE	11.76
ESE	3.69
SSE	1.29
SSW	11.18
WSW	20.69
WNW	11.84
NNW	20.59
<b>TOTAL</b>	<b>100.00</b>

## Traffic Assignment

The peak hour trips from Tables 6 has been distributed and assigned to the existing adjacent roads. As evident from trip generation calculations, the peak hour represents the worse case. Table 8 was developed to depict the PM Peak Hour Assignments.

**Table 8: PM Peak Hour Traffic Distribution**

Direction	IN	OUT	TOTAL
North	15+16=31	44+47=91	122
East	9+3=12	27+8=35	47
South	1+8=9	3+26=29	38
West	16+9=25	48+27=75	100
<b>TOTAL</b>	<b>77</b>	<b>230</b>	<b>307</b>

## Project Description / Location

The subject project is on the Southwest corner of SW 40<sup>th</sup> Street/Bird Road/SR 976 and Ponce de Leon Boulevard in the City of Miami, Florida. The following land use, as identified by the Institute of Transportation Engineers (ITE), most closely resembles the proposed redevelopment. These land uses are as follows:

- Land Use 310: Hotel with 262 Rooms
- Land Use 710: General Office Building with 269,510 SF
- Land Use 814: Specialty Retail with 3,190 SF
- Land Use 931: Restaurant with 3,530 SF

Figure 1 depicts the site's location map, while Figure 2 is the proposed site plan.

**Figure 1: Location Map**

## TRIP GENERATION

---

The trip generation for the proposed Merrick Manor mixed-use development was based on information contained in the Institute of Transportation Engineer's (ITE) *Trip Generation* manual (8<sup>th</sup> Edition). According to the subject ITE manual, the most appropriate "land use" categories for the subject project is ITE's Land Use 220 – Apartment, ITE's Land Use 814 – Specialty Retail, and ITE's Land Use 931 – Quality Restaurant.

Table 1 summarizes the trip generation associated with the Merrick Manor development. As indicated in Table 1, the proposed mixed-use development is projected to generate approximately 1,851 new daily trips, approximately 101 new AM peak hour trips (22 inbound and 79 outbound), and approximately 168 new trip during the typical afternoon peak hour (109 inbound and 59 outbound).

<b>TABLE 1</b> <b>Merrick Manor</b> <b>Trip Generation Summary</b>						
Land Use	Size	Daily Trips	AM Peak Trips		PM Peak Trips	
			Inbound	Outbound	Inbound	Outbound
Apartments	188 units	1,263	19	77	79	42
Retail	1,900 sq.ft.	84	0	0	2	3
Restaurant	5,600 sq.ft.	504	3	2	28	14
Total External Trips		1,851	22	79	109	59

Source: ITE *Trip Generation Manual* (8<sup>th</sup> Edition).

The trip generation equations for the Merrick Manor mixed-use project, given by ITE, are:

### RESIDENTIAL LAND USE (Land Use 220)

#### *Daily Trips*

$$T = 6.06 (X) + 123.56$$

Where T = average daily vehicle trip ends

X = number of residential units

#### *AM Peak Hour of Adjacent Street (Typical Morning Rush Hour)*

$$T = 0.49 (X) + 3.73 \text{ (20% inbound and 80% outbound)}$$

Where T = average AM peak hour vehicle trip ends

X = number of residential units

#### *PM Peak Hour of Adjacent Street (Typical Afternoon Rush Hour)*

$$T = 0.55 (X) + 17.65 \text{ (65% inbound and 35% outbound)}$$

Where T = average PM peak hour vehicle trip ends

X = number of residential units

---

### SPECIALTY RETAIL (Land Use 814)

#### *Daily Trips*

T = 44.32 (X)

Where T = average daily vehicle trip ends

X = 1,000 square feet of gross leasable area

#### *AM Peak Hour of Adjacent Street (Typical Morning Rush Hour)*

T = 0

#### *PM Peak Hour of Adjacent Street (Typical Afternoon Rush Hour)*

T = 2.71 (X) (44% inbound and 56% outbound)

Where T = average PM peak hour vehicle trip ends

X = 1,000 square feet of gross leasable area

---

### QUALITY RESTAURANT (Land Use 931)

#### *Daily Trips*

T = 89.95 (X)

Where T = average daily vehicle trip ends

X = 1,000 square feet of gross floor area

#### *AM Peak Hour of Adjacent Street (Typical Morning Rush Hour)*

T = 0.81 (X) (n/a; assumed to be 50% inbound and 50% outbound)

Where T = average AM peak hour vehicle trip ends

X = 1,000 square feet of gross floor area

#### *PM Peak Hour of Adjacent Street (Typical Afternoon Rush Hour)*

T = 7.49 (X) (67% inbound and 33% outbound)

Where T = average PM peak hour vehicle trip ends

X = 1,000 square feet of gross floor area

In order to assess impacts with a conservative approach, no internal capture or passer-by trips were assumed for the subject project.

## TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

---

The trip distribution was based on Miami-Dade County's Cardinal Distribution information for the study area. Table 2 below summarizes the county's cardinal distribution data for traffic zone 1081, which is applicable to the location of the subject project. Appendix C contains the County's cardinal distribution information for traffic zone 1081.

**TABLE 2**  
**Project Trip Distribution**  
**Merrick Manor**

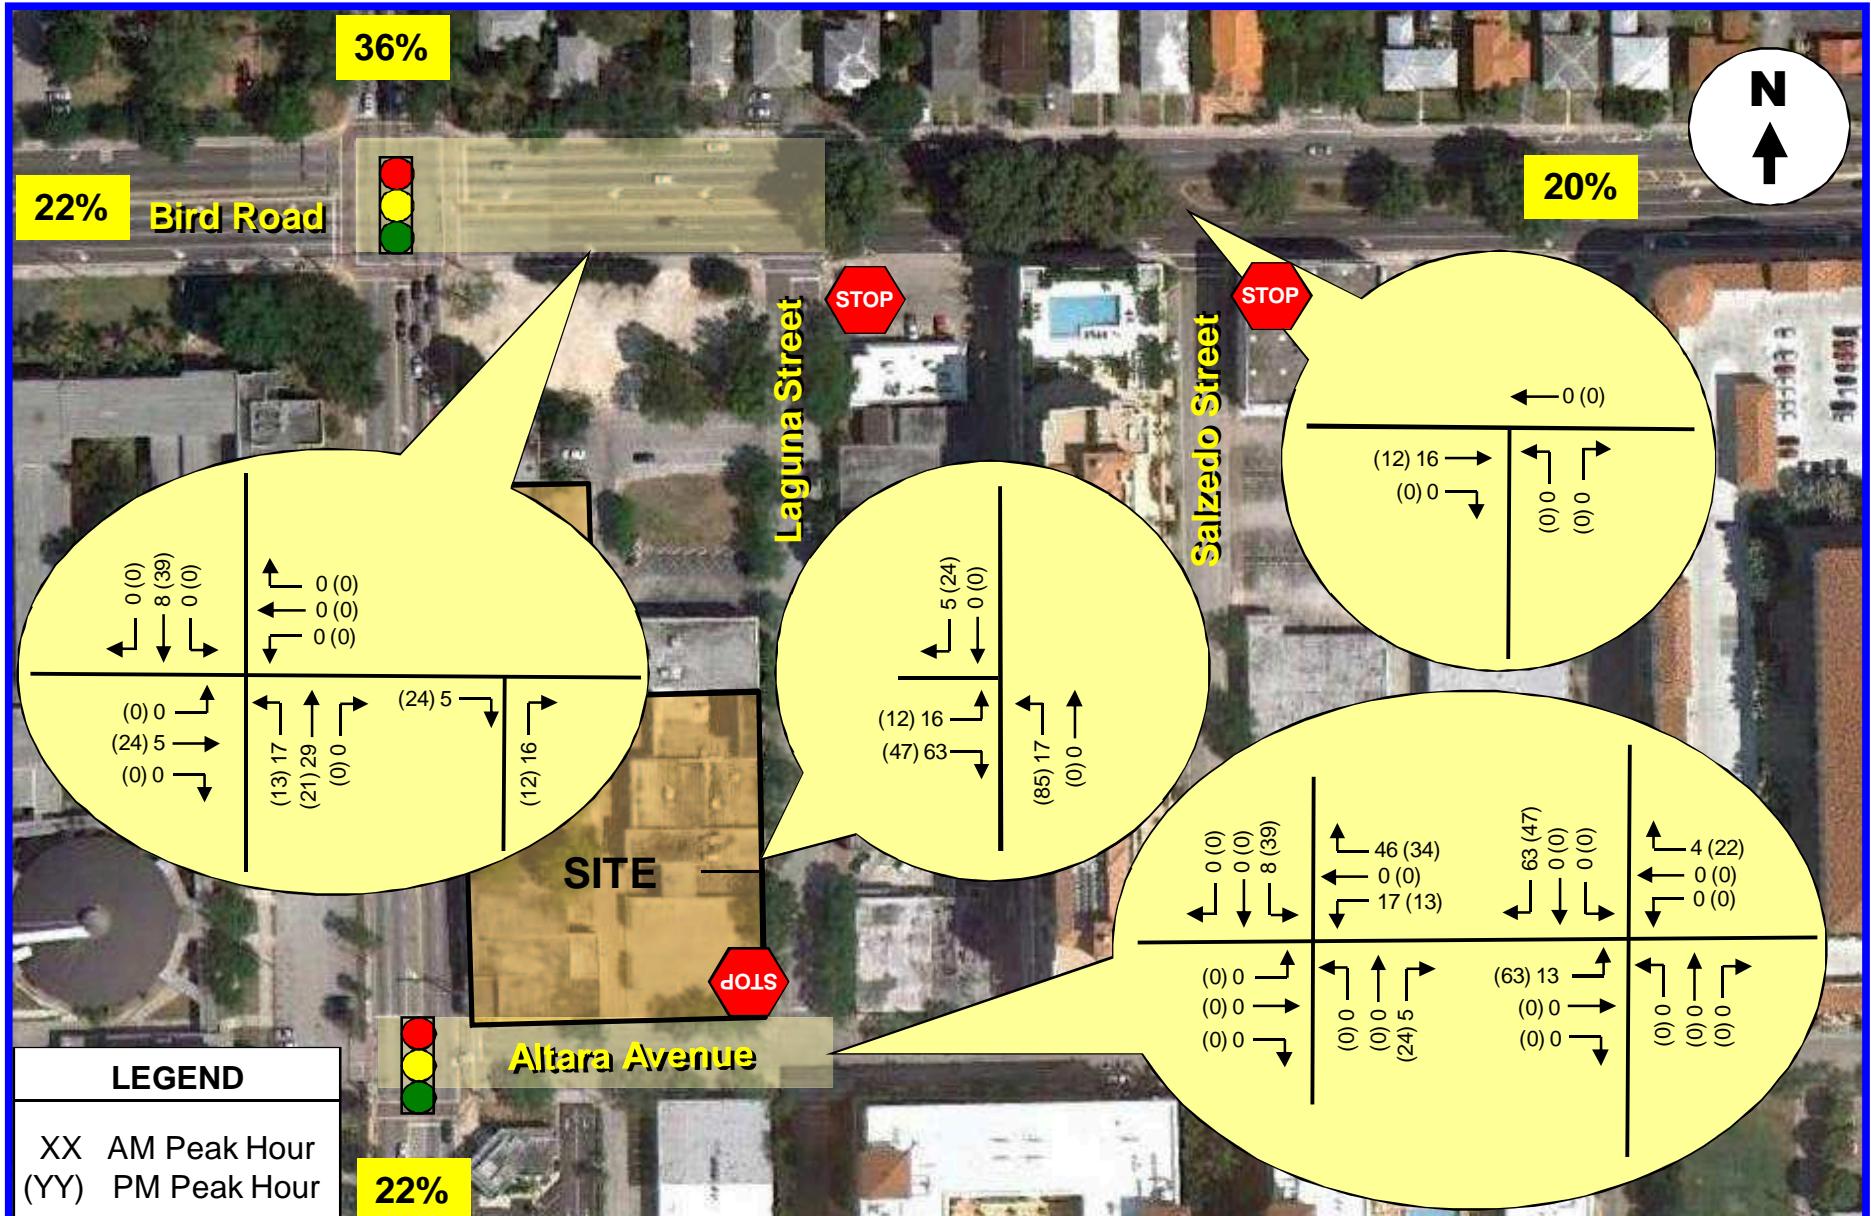

Direction		% of Total Trips
North:	Northwest	11.31%
	Northeast	25.33%
South:	Southwest	17.78%
	Southeast	4.45%
East:	Northeast	14.13%
	Southeast	4.80%
West:	Northwest	7.55%
	Southwest	14.65%
<b>Total</b>		100.00%

*Source: Miami-Dade County*

Using the trip distribution documented in Table 2, the traffic assignment assumed for the proposed mixed-use development is as follows:

- 36% to and from the north via Le Jeune Road
- 22% to and from the south via Le Jeune Road
- 20% to and from the east via Bird Road
- 22% to and from the west via Bird Road

The AM and PM peak hour traffic generated by the project was assigned to the project driveway and nearby study intersections using the traffic assignment documented above. The project traffic assignment is summarized in Figure 4.

**FIGURE 4**  
Merrick Manor  
Coral Gables, Florida

## INVENTORY

---

### **Existing Land Uses**

The project site currently consists of several one and two story commercial/warehouse buildings and off-street parking.

### **Proposed Land Uses and Access**

The Merrick Manor project will consist of the following land uses and intensities:

- 188 Rental Apartments
- Approximately 1,900 square feet of retail use
- Approximately 5,600 square feet of restaurant use

The access to the project will be provided via Laguna Street which borders the site on the east side.

For purposes of this traffic study, the project is anticipated to be built and occupied by the year 2013. Appendix A contains a copy of the proposed site plan for the Merrick Manor mixed-use project.

## TRIP GENERATION

---

A trip generation analysis has been conducted for the previous gasoline service station use and the proposed drive-in bank use. The analysis was performed using the trip generation rates and equations published in the Institute of Transportation Engineer's (ITE) *Trip Generation (9<sup>th</sup> Edition)* report. The trip generation analysis was undertaken for daily, AM peak hour, and PM peak hour conditions. According to the ITE report, the most appropriate "land use" categories for the previous and proposed development are:

### **GASOLINE / SERVICE STATION WITH CONVENIENCE MARKET (ITE LAND USE #945)**

- Weekday Trip Generation Rate:  $T = \text{PM Peak Trips} \div 8.3\%^1$
- AM Peak Hour Trip Generation Rate:  $T = 82.13 (X)$  (51% in / 49% out)  
*where T = number of trips and X = 1,000 SF gross floor area*
- PM Peak Hour Trip Generation Rate:  $T = 97.47 (X)$  (50% in / 50% out)
  - Pass-by = 62%<sup>2</sup>

### **DRIVE-IN BANK (ITE LAND USE #912)**

- Weekday Trip Generation Rate:  $T = 148.15 (X)$   
*where T = number of trips and X = 1,000 SF gross floor area*
- AM Peak Hour Trip Generation Rate:  $T = 12.08 (X)$  (57% in / 43% out)
- PM Peak Hour Trip Generation Rate:  $T = 24.30 (X)$  (50% in / 50% out)
  - Pass-by = 47%

Using the above-listed trip generation rates and equations from the referenced ITE document, a trip generation analysis was undertaken for the previous gasoline service station and the proposed drive-in bank. The results of this effort are documented in Table 1 on the following page.

---

<sup>1</sup> The previous use on this site was a gasoline / service station with convenience market. The size of the convenience market was 3,477 square feet. The number of former fueling positions is unknown. Therefore, the trip generation analysis was based upon the square footage of the convenience store. When the size of the convenience market is utilized as the independent variable, there is no corresponding equation or rate for the weekday trip generation. In order to determine the weekday trip generation rate, the data for this land use based upon fueling positions was utilized. The PM peak hour trip generation rate in this case is 13.51 trips per fueling position. The daily trip generation rate is 162.78 trips per fueling position. Hence, the PM peak hour rate is 8.3% of the daily rate.

<sup>2</sup> According to the ITE *Trip Generation Handbook*, the pass-by rate for Land Use 945 is 62% for the AM peak period and 56% for the PM peak period. In order to present a more conservative (i.e. worst-case scenario with respect to traffic impacts), the 62% pass-by rate was applied to both the AM and PM peak periods for the previous land use.

**Table 1**  
**Trip Generation Summary**  
**Chase Bank - Coral Gables, Florida**

Land Use	Size	Daily Trips	AM Peak Hour Trips			PM Peak Hour Trips		
			In	Out	Total	In	Out	Total
<b>Previous</b> Gasoline / Service Station with C-Market - Pass-By (62%)	3,477 S.F.	4,084 (2,532)	146 (91)	140 (86)	286 (177)	170 (105)	169 (105)	339 (210)
<b>Total</b>		<b>1,552</b>	<b>55</b>	<b>54</b>	<b>109</b>	<b>65</b>	<b>64</b>	<b>129</b>
<b>Proposed</b> Drive-In Bank - Pass-By (47%)	4,120 S.F.	610 (287)	29 (14)	21 (10)	50 (24)	50 (24)	50 (23)	100 (47)
<b>Total</b>		<b>323</b>	<b>15</b>	<b>11</b>	<b>26</b>	<b>26</b>	<b>27</b>	<b>53</b>
<b>Difference (Proposed - Previous)</b>			(1,229)	(40)	(43)	(83)	(39)	(76)

Compiled by: Traf Tech Engineering, Inc. (August 2013).

Source: Institute of Transportation Engineers (ITE) Trip Generation (9th Edition) and the Trip Generation Handbook.

As indicated in Table 1 above, the new Chase Bank is anticipated to generate 323 net (after pass-by) daily vehicle trips, 26 net AM peak hour vehicle trips (15 inbound and 11 outbound) and 53 net PM peak hour vehicle trips (26 inbound and 27 outbound). When compared with the previous gasoline / service station with convenience market development on this site, this represents a decrease of 1,229 daily vehicle trips, a decrease of 83 AM peak hour vehicle trips, and a decrease of 76 PM peak hour vehicle trips.

## TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

---

The trip distribution was based upon the Miami-Dade 2035 Long Range Transportation Plan (LRTP) Directional Distribution Report. Table 2 below summarizes the County's directional distribution data for traffic analysis zone 1081, which is applicable to the location of the subject project. Applicable excerpts from the referenced document are included in Appendix C.

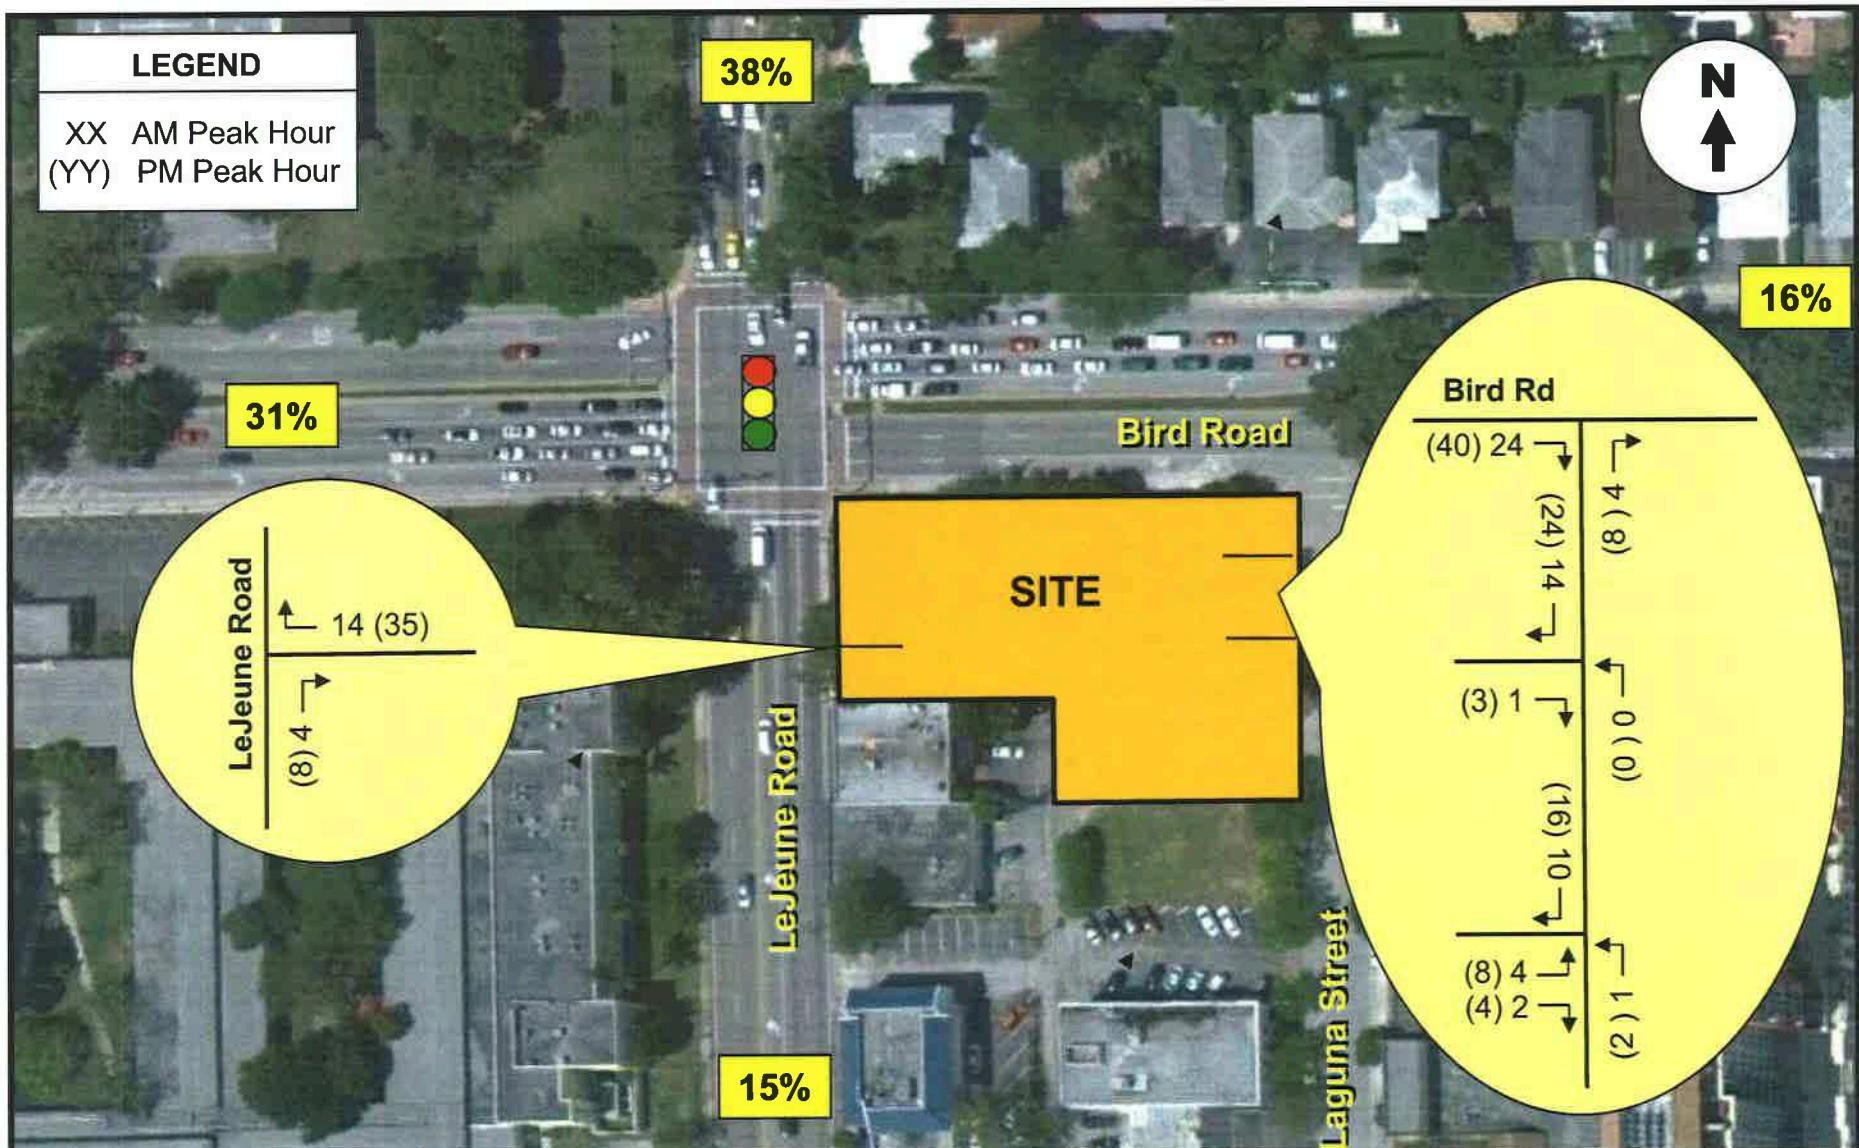

Table 2 Project Trip Distribution Chase Bank - Coral Gables, Florida	
Direction	Percent Distribution
<b>North</b>	
Northwest	11.31%
Northeast	25.34%
<b>South</b>	
Southwest	17.78%
Southeast	4.45%
<b>East</b>	
Northeast	14.13%
Southeast	4.80%
<b>West</b>	
Northwest	7.55%
Southwest	14.64%
<b>Total</b>	100.00%

*Source: Miami-Dade 2035 LRTP Directional Distribution Report*

Utilizing the trip distribution data documented in Table 2, while taking into consideration current traffic volumes / patterns, nearby land uses / destinations, and project driveway locations, the following traffic assignment for the proposed drive-in bank was developed:

- 38% to and from the north via LeJeune Road
- 15% to and from the south via LeJeune Road
- 16% to and from the east via Bird Road
- 31% to and from the west via Bird Road

The AM and PM peak hour traffic generated by the project was assigned to the project driveways using the traffic distribution / assignment documented above. The project traffic assignment is summarized in Figure 2 on the following page.

**Traf Tech**  
 ENGINEERING, INC.

## Driveway Traffic Assignment

**FIGURE 2**  
 Chase Bank  
 Coral Gables, Florida

## INVENTORY

---

### **Existing Land Use and Access**

The project site was previously developed with a gasoline service station with a 3,477 square foot convenience store. Access to the site was provided via two (2) right-turn in / right-turn out driveways on Bird Road, a full access driveway on LeJeune Road, and another full access driveway on Laguna Street.

### **Proposed Land Use and Access**

The subject site is planned to be redeveloped with a bank building and two (2) remote drive-through lanes. The new branch bank will consist of approximately 4,120 square feet of building area and parking will be provided on the east and south sides of the site. Appendix A contains the currently proposed site plan for the project.

The two (2) driveways on Bird Road will be eliminated and, as such, no vehicular access will be provided on Bird Road. The existing access driveway on LeJeune Road will remain but will be restricted to right-turns in and right-turns out only. Two (2) driveways will be provided on Laguna Street. The northern driveway on Laguna Street, which is to be located approximately 50 feet from Bird Road, will allow for right-turns and left-turns in and right-turns out (i.e. left-turns out will be prohibited due to the proximity to Bird Road). The southern driveway on Laguna Street will be located approximately 90 feet from Bird Road and will be full access (i.e. all movements will be allowed).

Given the low vehicular volumes on Laguna Street (approximately 120 two-way peak hour vehicles as documented in the Merrick Manor traffic study, please see Appendix B), the relatively low number of peak hour project trips on this roadway (see Figure 2), the presence of an eastbound right-turn lane on Bird Road and Laguna Street, and a median separator on Bird Road, the proximity of the northern driveway on Laguna Street to Bird Road appears to be adequate from an operational standpoint. And, as stated previously, left-turns out of this driveway will be prohibited which will further enhance the operating conditions at this location.

## **Appendix E**

### **Pedestrian Assessment**

## Assessment of Pedestrian Intervals and Phases Existing Signal Phasing Plan and Timings

### LeJeune Road / Altara

#### ***AM & PM Peak Signal and Timing Plan***
